

**2002**

**DMS-100 Family**

# **QUICK REFERENCE GUIDE**

**TAM-1001-018**

**Standard 09.01**

**August 2002**

---

**YOUR GUIDE FOR:**

- Commonly used DMS CI: level commands
  - Commands for TABLE EDITOR, SFDEV, DMSSCHED SPMS, TABAUDIT, DMSMON, TRAVER, DISPCALL, SHOWAUD, LOGUTIL, DLOG, CLASS, DISKUT, DSKUT, PRSM, OMs, SOC, AFT, RASL, AUTOMATIC IMAGE DUMP, and SDM UNIX commands
  - Quick references for AIN, CCS7, LNP, ISDN, CLASS, ACD-MIS, CC MIS, SMDI, CompuCALL, Remotes, DMS-250, STP Broadband, SDM, SPM, and Centrex IP
  - Tier II support tools for XPMIST, DEBUG, ISDN Q931, SPM PRI Q931, ACDDEBUG, TERMTRACE, C7TU, CALLTRAK, XPMTRAK, CMINFO, and REMLOGIN
  - Quick references for NTPs, IMs, and other documents
  - Product Engineering Codes (PECs) for circuit packs
  - Hardware shelf diagrams with circuit pack locations
  - Circuit pack descriptions section
  - SuperNode, XPM, and other diagrams
  - XPM/DTC port and link mapping diagrams
  - TOPS hardware including IP-XPM Gateway
  - TOPS MPX/IWS & Attendant Console keyboard layouts
  - DPP/BMC hardware and DPP commands
  - SuperNode, SPM, XA-Core, and other hardware
  - RTIF commands and procedures
  - DIP switch settings for 6X21, 6X50, and 6X85 DS1 cards
-

## Please read before using

The *2002 DMS-100F Quick Reference Guide* provides a quick reference for commonly used commands, utilities, tools, hardware, and other job-supporting information. The intent of this document is not to replace Nortel Networks Technical Publications (NTPs) and other supporting documents. Its purpose is to consolidate as much usable job-related information as possible into a small pocket-size document for quick reference and on-the-job use.

The *2002 DMS-100F Quick Reference Guide* is intended for both Tier I and Tier II support users. Tier II support tools are segregated in an area near the back of the guide. Since the misuse of these tools could impair service, they should only be used by technicians that have been trained in their use.

When there is a question about the technical accuracy of this document and its contents, the NTPs and other supporting documents have the final authority. Where possible, the information in this guide makes references to NTPs and other supporting documents. Those documents should be referenced for **warnings, cautions,** and other **advisory** information that may not exist in this guide due to the limitation of space.

Hardware displayed in this document provides examples for reference to circuit pack slot locations. For most of the examples, the vintages (releases) of various packs are not shown due to space limitations. Hardware examples may not be exactly as your office is provisioned due to optional pack assignments and the quantity of circuits equipped. For a list of packs and their vintage application, reference the PEC Code list and the circuit pack description area of this guide. Other supporting information can be found in the DMS-100F Baseline Report and NTP 297-8991-805.

Some of the hardware listed within this guide has been manufacture discontinued (MD'd). It has been left in the guide to support MD'd hardware that is inservice, and in most cases, still supported.

For customers to order copies of this document within North America, call toll free 1-877-662-5669 (Option 2, then Option 1). Nortel employees can order copies through Internal Distribution or through the Documentation Ordering Tracking System (DOTS) (see IDS Home Page at <http://zrtps08m.us.nortel.com/>).

Any customer comments, suggestions, or corrections should be made through your Nortel Networks Regional Support Center.

## WHAT'S NEW OR CHANGED FOR THIS ISSUE

	<b>Page(s)</b>
• Added alphabetical index in back of the guide .....	161—166
• Updated entire document for and through NA017	
• Added more SPM quick reference information:	
— Verifying Crossover Messaging .....	108
— SPM Primary Rate Interface (PRI).....	109
— SPM PRI Trunk Tables Datafill Sequence and Notes .....	109
— SPM Trunk Provisioning Limits for pre-SP16.....	110
— SPM EXECTAB lineup.....	110
— Exec lineups in table MNNODE for DMS250/500 .....	110
— Exec lineups in table MNNODE for DMS100 offices.....	110
— DAL prefix on the same SPM .....	111
— LED Alarm Indicators .....	112
— PREPDATACHNG command.....	112
• Added SPM PRI Q931 Message Tracing Tool .....	150
• Added Centrex IP Client Manager Quick References:	
— PTE2000 Centrex IP Frame.....	45
— Centrex IP Gateway MCG CPX8216T Chassis .....	45
— Centrex IP and Conventional Centrex Configuration .....	46
— Centrex IP Client Manager Documentation References .....	46
— Event Logs.....	46
• Added more SDM UNIX commands .....	127
• Added TOPS IP-XPM Gateway Peripheral .....	125
• Updated and added more PRISM information:	
— AUTOPROC command.....	25
— Missing PRSU Files .....	23
— Obsolete/Obsolete Emergency PRSUs at VA status .....	23
— Patching After Loading (PAL) .....	25
— Post-Release Software Updates (PRSU) Statuses .....	22
— PRSM Basic Commands, Syntax, and Examples .....	24
— PRSU EXTENSIONS Using the Format 'AAANNTaa' .....	22
— SPM loadfile destinations .....	23
— SPM Patching After Return To Service (SPARTS) .....	25
— Which PRSU files to keep/erase .....	22
• Added Common Peripheral Controller Equip. (CPCE) Frame	115
• Added FINDREF and CAPCI commands.....	8
• Updated DEBUG BRISC and XA-Core verification data for NA015 and NA017 .....	154 — 155
• Removed PATCHER information.	
• At Nortel's request, removed UE9000 and AccessNode Products.	

## Revision History

Issue	Date	Cover Color
01.01	December 1993	White
02.01	May 1995	Blue
03.01	March 1996	Green
04.01	January 1997	Brown
05.01	January 1998	Black
06.01	January 1999	Light Gray
07.01	January 2000	Red
08.01	February 2001	Spanish Maroon
09.01	August 2002	Dark Green

## Abbreviations and Acronyms

(NTP 297-1001-825, Glossary of Terms & Abbreviations Ref Manual)

ACD	Automatic Call Distribution
AIN	Advanced Intelligent Network
AMA	Automatic Messaging Accounting
ASCII	American Standard Code for Information Exchange
CALLTRAK	Call Tracing
CC MIS	Call Center - Management Information System
CLASS	Custom Local Area Signaling Services
CCS7	Common Channel Signalling No. 7
C7TU	CCS7 Test Utility
CM	Computing Module
DCM	Digital Carrier Module
DISPCALL	Display Call
DLM	Digital Line Module
DPP	Distributed Processing Peripheral
DSNE	Double Shelf Network
DTC/DTCI	Digital Trunk Controller/Digital Trunk Controller ISDN
DMS	Digital Multiplex System
DISKUT	Disk Utility (SLMs)
DRAM	Digital Recorded Announcement Machine
DSKUT	Disk Utility (DDUs)
DTM	Digital Trunk Module (EDRAM peripheral module)
EBS	Electronic Business Set
EDRAM	Enhanced Digital Recorded Announcement Machine
ENET & JNET	Enhanced Network and Junctioned Network
GPP	Global Peripheral Platform (International)
CPM	Common Peripheral Module
IOC & IOM	Input Output Controller and Input Output Module
ISDN	Integrated Services Digital Network
ISM	Integrated Services Module
ISN	Intelligent Service Node
IPE	Intelligent Peripheral Equipment
ISUP	ISDN User Part
LCM & LCM1	Line Concentrating Module / LCM ISDN
LGC & LGCI	Line Group Controller / Line Group Controller ISDN
LIU7	Link Interface Unit (SS7)
LM & RLM	Line Module and Remote Line Module
LMS	Local Message Switch
LNP	Local Number Portability
LRN	Location Routing Number
LTC & LTC1	Line Trunk Controller and Line Trunk Controller ISDN
MAP	Maintenance and Administration Position
MD	Manufacture Discontinued
MS	Message Switch
MSM	Message Services Module (DMS Voicemail)
MTM	Maintenance Trunk Module
NTP	Nortel Networks Technical Publication
OPM	Outside Plant Module
PCL	Product Computing-module Load
PEC	Product Engineering Code
PRSM	Post Release Software Manager (Replaced PATCHER)
QRG	Quick Reference Guide
RCC	Remote Cluster Controller
RCC2	Remote Cluster Controller 2 (Remote Switching Center)
RLM/RLCM	Remote Line Module/Remote LCM
RMM	Remote Maintenance Module
RSC/RSCI	Remote Switching Center/RSC ISDN
SCP	Service Control Point
SLM	System Load Module
SMDI	Simplified Message Desk Interface
SMA	Subscriber Carrier Module-100A Access
SMR	Subscriber Carrier Module-100R Remote
SMR-RCT	SMR-Remote Concentrating Terminal
SMS	Subscriber Carrier Module-100S (SLC-96)
SMU	Subscriber Carrier Module-100 Urban
SNSE	DMS SuperNode Small Exchange
SPM	Spectrum Peripheral Module
SP/SSP	Signalling Point/Service Switching Point
STM	Service Trunk Module
STP/SSP	Signalling Transfer Point/Service Switching Point
STP	Signalling Transfer Point
TAM	Technical Assistance Manual
TOPS	Traffic Operator Position System
TOPS IWS	TOPS Intelligent Work Station
TOPS MPX	TOPS MPX (Provides Dir. Assist. and Intercept Services)
TOPS-TPC	TOPS-Terminal Position Controller
TMS	TOPS Message Switch
TRAVR	Translation Verification
XPMIST	XPM Intercept System Test

# Nortel Networks Technical Publications

(NTP 297-8991-001, DMS-100 Product Documentation Directory)

**Note:** See NTP 297-8991-001 for a list of Nortel Networks Technical Publications (NTPs). Also, see NTP 297-8991-002, *Cancellation Cross Reference Directory* for a cross-reference list of canceled and replacement documents.

## DMS-100F Documentation Numbering

DMS-100F NTPs are identified by a ten-digit number (XXX-YYYY-ZZZ) that is divided into three blocks. The document division number, XXX, denotes the system. For the purpose of this QRG, only the 297 division number is used:

- 297 = Digital Multiplex System (DMS)

The document layer number, YYYY, denotes the Product Computing-module Load (PCL) or product name. Within the documentation structure, the document layer number is dependent upon the PCL number for the specific software load. Following is a list of DMS-100F layer numbers and their products even though some are manufacture discontinued (MD):

PCL Layer #	PCL Name or Product Name
0201	NA Service Priority Classifications Descriptions
1001	DMS-100 Family
1003	NAV Family Audiogram Delivery System
1011	DNC-50, DNC-100, DNC-500 Dynamic Net Cont Systems
1021	Network Operations Systems Station Detail Server DNC-50
1091	NAV Family Applications Vehicle
1301	DMS-100F TOPS Voice Service Node
1421	DMS-100F Subscriber Services
1771	DMS Spectrum Peripheral Module (DMS-SPM)
2011	Meridian Business Sets
2013	NAV Family PowerView Services
2031	DMS-100 Family Attendant Console
2041	DMS-100 Family Automatic Call Distribution (ACD)
2061	DMS-100 Family Customer Data Change
2071	DMS-100 Family MDC Station Message Detail Recording
2081	DMS-100 Family MDC ACD-MAX 3.5
2101	DMS-100 Family Remote Line Module (RLM)
2121	DMS-100 Family Line Engineering Guidelines (DataPath)
2211	DMS-100F Automated Directory Assist. Service (ADAS)
2251	DMS-100 Family TOPS Intelligent Work Station (IWS)
2271	DMS-200 TOPS 04 (Canceled)
2281	DMS-100 Family TOPS MP
2291	DMS-100 Family TOPS MPX
2401	DMS-100F Integrated Services Digital Network (ISDN)
2451	DMS-100 Family Digital Network Termination Eng/Guides
2461	DMS-100F DMS SuperNode Dialable Wideband Services
2667	DMS-100F SDM Carrier User Guide
2671	DMS Call Center Management Information Sys (CCMIS)
5001	DMS-100F DMS SuperNode & DMS SuperNode SE
5051	DMS-100F SuperNode Data Manager (SDM)
5061	DMS-100 Family SDM Troubleshooting and User Guides
5111	DMS-100F DMS SuperNode DataSPAN Frame Relay Serv
5151	DMS-100 Family E800 SSP toll-free numbers
5161	DMS-100 Family Advanced Intelligent Network Essentials
6201	DMS-10/DMS-100 Billing Media Converter II
7001	DMS-10/DMS-100 DMS VoiceMail
8001	U.S. Stand-alone DMS-100/200
8021	U.S. DMS-100/200 TOPS Combination
8063	DMS-100 Family 1 Meg Modem Services Network
8081	DMS-200 Translations
8091	DMS-100 Wireless
8101	Signaling Transfer Point (STP) Base
8111	Signaling Transfer Point MDR7
8121	STP Signaling Engineering & Administration Sys. (SEAS)
8211	Outside Plant Access Cabinet (OPAC)
8221	Remote Switching Center (RSC)
8223	DMS-100F Remote Switching Center Multi-Access
8231	Subscriber Carrier Module-100S (SCM-100S)
8241	Subscriber Carrier Module-100 Urban (SCM-100U)
8251	Subscriber Carrier Module-100 Access (SCM-100A)
8253	Subscriber Carrier Mod-100 Access (MVI-20) (SCM-100A)
8261	RSC-SONET Model A (DS1)
8263	SCM-100A Maintenance Manual (SCM-100A)
8271	RSC-SONET Model A (PCM30)
8281	RSC-SONET Model B (DS1)
8291	RSC-SONET Model B (PCM30)

Continues on the next page.

8301	Subscriber Carrier Module-100S Remote (SCM-100SR)
8321	Extended Peripheral Module (XPM) (DS1)
8331	Extended Peripheral Module (XPM) (PCM30)
8341	TOPS Message Switch
8351	RLCM Manual
8361	Outside Plant Module (OPM)
8353	Star Remote System
8403	Operator Services System AIN (OSSAIN)
8411	TOPS (Stand-alone US) (USTOPS)
8421	TOPS (Stand-alone Canadian) (CDNTOPS)
8441	DMS-100F Global TOPS Solo
8501	DMS SuperNode Service Control Point (SCP) II
8531	Network Switching Systems Advanced Intelligent Network
8601	DMSGL002 DMS Global
8981	North American common
8991	PCL common, miscellaneous, & documentation directories

### Key Numbers

The last three digits of the NTP, ZZZ, denotes the type of NTP and is called the key number. The following table lists NTP types and their associated key number. It includes all currently used PCL and XPM key numbers.

NTP Type	Key Number
Translations Guide.....	350
Alarm and Performance Monitoring Procedures.....	543
Trouble Locating and Clearing Procedures .....	544
Recovery Procedures .....	545
Routine Maintenance Procedures .....	546
Card Replacement Procedures.....	547
XPM Maintenance Manual (remotes only, layers 8201 - 8353)..	550
Peripheral Module Software Release .....	599
Feature Description Manual.....	801
Hardware Description Man. (layer 8991 only) .....	805
Service Order Reference Manual .....	808
XPM Operational Measurements Reference Manual (remotes only, layers 8201 - 8331).....	814
XPM Translations Reference Manual .....	815
Log Reports Reference Manual .....	840
Office Parameters Reference Manual .....	855
Software to Data Cross-Reference .....	856

## Software Optionality Control (SOC)

*(297-8991-901, DMS-100F Software Optionality Control User Manual)*

Software optionality control (SOC), part of the DMS Evolution product delivery process, facilitates the definition and delivery of product computing module loads (PCL). Once the new PCL is loaded, all the features it contains can be activated by the customer as needed without a software reload. The user interface for SOC consists of SOC level commands on the MAP terminal. The **ASSIGN**, **SELECT**, **DBAUDIT** and **REMOVE** commands on the SOC level allow you to:

- assign right-to-use (RTU) to an option.
- remove RTU from an option.
- assign a usage limit to an option.
- assign RTU or usage limits to a group of options using a key code file.
- assign the on or idle state to an option.
- assign a warning threshold to a usage option.
- generate a report about one or more options in a PCL.
- perform an audit of the SOC database.

### SELECT command

This command displays information about options. There are several types.

>**SELECT** <select\_type> <value> [<report\_type>]

>**SELECT ALL** [<report\_type>]

### DBAUDIT Command

This command performs a detailed audit and reports any internal database inconsistencies as well as any discrepancy between a database value and a feature's reported value.

### ASSIGN RTU & REMOVE RTU commands

When an operating company purchases a state option, Nortel gives the operating company a password called a key code for the option. Once the key code is known, the ASSIGN RTU command can be used to grant the operating company permission to change the state of the option. The REMOVE RTU command allows operating company personnel to remove the right-to-use (RTU) from a state option.

## DMS CI: Level Commands

(NTP 297-1001-820, 821, or 822, *Command Reference Manual*)  
(NTP 297-1001-129, *Input/Output System Reference Manual*)

**Note:** Use **>HELP <command>** to get more details of the following CI: level commands, except for some like the **ABORT** command.

- >ABORT** use if difficulty is experienced with using a command.
- >CALLDUMP** outputs billing records using same format as AMADUMP
- >CLLIREF** use parameter MEMBERLESS to search for CLLIs in table TRKGRP against table TRKMEM CLLIs. Use SEARCH parameter to search for CLLI(s) in all or specified tables.
- >CLLIRBT** use to scan for differences between table CLLI and CLLIMITCE or between TRKMEM and CLLIMITCE sub-table DIAGDATA. Generates DFIL106 log if problems.
- >COMMAND <x>** (full command name)  
used to create user defined commands to simplify routine or repetitive input tasks.  
(i.e., COMMAND T (TABLE)). T is now TABLE

- >CPSTAT** display of SuperNode switch activity.

Example of CPSTAT results for a SuperNode:

CATMP/HR	CPOCC	AUXCP	CPAVAIL	ENGLEVEL	ENGPARM	CCOVRD			
840	2%	0%	79%	BELOW	77%	OFF			
SCHED	FORE	MAINT	DNC	OM	GTERM	BKG	NETM	SNIP	IDLE
13%	1%	6%	0%	1%	0%	33%	0%	0%	46%

- >CAPCI** display of XA-Core switch activity.

Example of CAPCI results for a XA-Core:

CATMP/HR	UTIL	ENGATMP	MAXCATMP	COMPLEX	ENGLEVEL	CCOVRD	PESC
0	0%	--	--	--	BELOW	OFF	NO

### Do Not Disturb (DND) Queries:

- >DND STATUS** displays next wakeup time (table DNDSCHED).
- >DND DISPLAY <custname> <disprange> {DN7D <dn>, GRPNO <group> {1 to 63}}, ALLGRPS, INTERVAL}**  
displays individual DN or group data.
- >DTDETECT** command to activate digitone fraud program.  
Suggest using this program after a restart to prevent no-dial-tone customer reports from customers that are not supposed to have digitone phones.
- >EXPAND** use to uncompress files.
- >ERASE** deletes a symbol from the user's directory  
(i.e., ERASE T to erase command named "T").
- >FILECLOSE <filename> <device>** closes a specified store file/device.
- >FINDTAB** Finds all tables which begin with a specific set of letters.  
The output indicates the table's position in the DART table, the dump and restore method and the complete table name.  
(i.e. **>FINDTAB OFC** will find all tables beginning with OFC.
- >FINDREF <table name> <key> [filename] [device]** a searching tool that finds all tuples that reference a specific owner tuple.  
Use **>FINDREF LISTTABLES** to display a list of owner tables which the **FINDREF** command can be run against.
- >FORCEOUT <username>** used to force out a user.
- >HELP <x>** used with a command name (x) to display command syntax and parameter information, or a list of subcommands.

### Keyboard Shortcuts:

- <ctrl>E** deletes from current cursor position to end of line.
- <ctrl>F** moves cursor forward one character.
- <ctrl>I** used to insert at the current cursor position.
- <ctrl>J** line feed.
- <ctrl>M** enter.
- <ctrl>U** erases line.
- <ctrl>X** exits insert mode.
- ?** entering '?' displays the last line input (up to 3 lines).
- >LISTSF INFO ALL** finds store file owner.
- >LISTST** use at MAP levels to get a list of directories, then use the **PRINT <dir>** command to get list of hidden commands.
- >LISTVFGS <customer name or VFG name>**  
use to get a list of VFG members and their status.
- >LTCCH** can be used to obtain detailed information on the usage of channels on both the C-Side and P-Side of certain host XPMs. Use Q LTCCH to get command syntax.

**DMS CI: Level Commands continue on the next page.**

- >**MAPCI NODISP** use to suppress the MAP level display.
- >**MSG** sends a message to another user (i.e., MSG NTAS 'Hello').
- >**NAG** Node Assessment Graph (NAG) is an hourly snapshot of equipment status, REX, and overload (see NAG400 log).
- >**PERMIT** defines a new valid user and assigns parameters.
- >**UNPERMIT** removes an existing user.
- >**PRIVCLAS** adds, deletes, or changes, the privilege class(es) for specified command(s) or program module(s).
- >**OMPRDUMP** Request OMPRSPEC reports from the OMTAPE data.

### Query Commands:

- >**QCUST** retrieves information about all the lines associated with one or more customer group(s).
  - >**QDN dn** displays information about a subscriber line.
  - >**QDNWRK** displays a range of working lines using directory #'s.
  - >**QGRP** display various equipment groups using DN or LEN.
  - >**QHASU** display hardware assigned and software unassigned.
  - >**QHLR** displays DN in HLR for mobility numbers.
  - >**QLEN len** displays information about a subscriber line.
  - >**QLEN dn** displays complete information about a subscriber line.
  - >**QLENWRK** used to query a range of working lines using LENs.
  - >**QMADN** display Multiple Appearance Dir. Number (MADN).
  - >**QPDN** list ported in and out DN's and ported DN's of a single NPANXX
- Note:** The following QUERYCM and QUERYMS commands are dependent upon table PECIN's datafill being current.
- >**QUERYCM** hidden command off the CM MAP level used to query information on CM hardware. Use HELP QURYCM.
  - >**QUERYMS** hidden command off the MS MAP level used to query information on MS hardware. Use HELP QUERYMS.
  - >**QUSER** displays a list of user names and associated devices.
  - >**QUSER COMPLETE** includes names, devices, and processes the user is running in. (see QUERY PROCID).
  - >**QUERY PROCID** <procid> displays what process has been started by the user (use the PROCID field data from the **QUSER COMPLETE** command).
  - >**RECORD QUERY** displays all recording links.
  - >**TRKQUERY TM** <TMType> <TMNO> displays TM ckt. info.
  - >**TRKQUERY PM** <PMType> <PMNO> <CKT> disp's ckt info.
- >**QUIT** used to change current display to the previous directory.
  - >**RCCMAP** gives information on the channel usage of an RCC - LTC.
  - >**RECORD START** sends output from your dev. to dev. ispecified:
    - >**RECORD START ONTO** <device name> sends output to device specified.
    - >**RECORD START FROM** <device name> **ONTO** <device name> sends output from and to devices specified.
  - >**RECORD STOP** stops recording:
    - >**RECORD STOP ONTO** <device name>
    - >**RECORD STOP FROM** <device name> **ONTO** <device name>
  - >**RENAMECLLI** <old\_cli> <new\_cli> chg. cli names in CLLI table.
  - >**REPEAT** used to repeat CI expression specified number of times. (Ex., >**REPEAT 3 (NEXT)** to repeat next command 3 times).
  - >**SEND** redirects the user's terminal response to an alternate device:
    - >**SEND** <device> <filename> terminal response sent to file.
    - >**SEND** <device name> terminal response sent to dev. specified.
    - >**SEND PREVIOUS** resets terminal response to original terminal.
  - >**SHERLOCK** request data for service failure analysis.
  - >**SHOW USERS** displays valid users list (use PRINT USERS for copy).
  - >**SHOWUSES** <table> displays dependency table(s) for specified table.
  - >**SHOWUSERS** <table> displays tables that use the specified table.
  - >**SSR** 15 min. switch status report—try DISPLAY SSR600  
VERBOSE command. See tables SSRFORM & SSRDEF.

## OM Commands

(NTP 297-1001-300, Basic Administration Procedures)

**Note:** The following OM commands are used to add, delete, change, display, and query OM data:

> <b>CLRINVREG</b>	Can be used to clear invalid INWATS registers after a restart. Use it before reading or resetting INWATS registers after a restart.
> <b>OMSHOW</b>	Displays all or part of a specified OM group's key structure and part or all of the contents. i.e. > <b>OMSHOW UTR HOLDING</b>
> <b>Q OMSHOW</b>	Use this command to get a list of the OM groups and classes defined by the OMCLASS command.
> <b>OMDUMP</b>	Used with table OMACC to display groups and fields already assigned.
> <b>OMCLASS</b>	Used to define or change a class for table OMACC. Once defined, a class name cannot be deleted, but it can be renamed. Registers and register groups are added to the class using commands <b>OMACCFLD</b> and <b>OMACCGRP</b> .
> <b>OMACCFLD</b>	Assigns or deletes individual OM register fields to the accumulating classes.
> <b>OMACCGRP</b>	Assigns or deletes OM groups to the accumulating classes that were previously defined by OMCLASS.
> <b>OMFORMAT</b>	Similar to the <b>OMSHOW</b> command, except that only one OM group is displayed.
> <b>OMACCKEY</b>	Allows the operating company to select specific tuples within a named group and class for display or printout.
> <b>OMTOTAL</b>	This useful command turns the totalling feature on or off for a specified OM group.
> <b>OMACCTOT</b>	Turns the totalling feature on or off for a specified class and group.
> <b>OMBR</b>	This command—along with parameters, stops, starts, displays—provides control for buffered OMs. It can be used when problems arise with buffered OM reports.
> <b>OMGETGD</b>	This command processes the header (H), class (C), group (G), field (F), and key (K) records stored at the beginning of the data file. This command causes a translation database to be built. Close the requested file in DIRP before issuing this command.
> <b>OMPRDUMP</b>	Provides the capability to generate operational measurement special reports (OMPRSPEC) for the OM data stored on the tape or disk in the standard recording format (OMTAPE).
> <b>OMPRTREP</b>	Requests the printing of the OMPRSPEC report.
> <b>OMPRTSET</b>	Sets or queries the time and date parameters for report generation.
> <b>OMMASTER</b>	This command, executed on the CM, allows the user to configure a node as the central collector for billing. This is the node (CM, FP2, or the enhanced input/output controller (EIOC)) on which the OM accumulation and reporting functions take place. <b>WARNING</b> - Use of the OMMASTER command causes loss of currently defined accumulation classes and their data. Also, do not “break” (use command HX) from the OMMASTER command.
> <b>OMRESET</b>	This command provides for the record count to be reset only on <i>reload</i> restarts.
> <b>OMREPORT</b>	Allows the capability to query for a list of all report names in the OMREPORT system and to request an OM report by SCHEDNO in table OMREPORT.
> <b>READ</b>	Used to query the register content of specified lines and displays the line information.
> <b>READPX</b>	Displays information for INWATS registers associated with options INW and 2WW for PX trunks.
> <b>READRESET</b>	Queries register content of specified lines, displays line information, and resets register to zero.
> <b>READRESETPX</b>	Displays the information for INWATS registers associated with options INW and 2WW for PX trunks, and resets the registers back to zero.
> <b>READVFG</b>	Displays the information for INWATS VFGs.

**OM commands continue on the next page.**

## OM commands continue.

- >**READRESETVFG** Displays the information for INWATS VFGs, and resets the registers back to zero.
- >**SETDBDEV <device>** Designates a disk file for the storage of KEY and INFO values read from the input data file.
- >**SLU** Accesses the SLU system.
- >**SLUADD & SLUDEL** These commands add or delete line identifiers for subscriber line usage (SLU) input tables.
- >**SLU\_INSTALL** Looks for errors in the SLU input tables before filling the OM group with new data. Lines not previously installed are set to zero while the installed lines are retained.
- >**SLU\_DEINSTALL** Stops all OM's on lines in specified OM group but doesn't affect the entries in associated input table.
- >**SLU\_LMINSTALL** For LM's and their associated lines, this command removes all lines from OM group ENG650M1 and creates an OM group ENG640M1. The SLU input table is not affected.
- >**SLUDUMP** Except for the **SLU\_DEINSTALL** command, the **SLUDUMP** command lists the commands issued for SLU input tables that have been installed.
- >**SLUFINDI** Finds and displays specified line identifier within an input SLU input table. If associated with a hunt group, then all the members are displayed.
- >**SLUFINDO** Finds and displays the register counts for a specified line identifier within an OM group. This command is more effective if the **SLU\_DEINSTALL** command is used to make the OM group inactive so that the register counts are held.
- >**SLUSET** Establishes a default table for commands **SLU-ADD**, **SLUDEL**, **SLUFINDO**, and **SLUFINDI**.
- >**SLU\_TABLE\_STATUS** Displays a list of active and inactive tables.
- >**SLU\_TEST <table\_name>** Checks each datafill in the specified SLU input table.
- >**ZEROSUP** Turns the zero suppression on or off. This command is part of the OMPRDUMP directory.

## Store File Editor Commands

(NTP 297-1001-360, Basic Translations Tools Guide)

**Note:** The following store file commands are most of the common used commands and is not a complete list of store file commands.

- >**EDIT** creates a new file or enters an existing file.
- >**READ** CI level command used to run a specified store file.
- >**ERASESF** CI level command that erases a specified store file.
- >**FILE dev\_type file\_name** refiles the file to a specified device (SF if not specified) with any updated information and exits EDIT.
- >**LISTSF** lists the files in SFDEV that the user created.
- >**LISTSF ALL** lists all the files contained in SFDEV.
- >**LISTSF INFO ALL** lists all the SFDEV files and user information.
- >**LISTSF <user>** list files for a specific user—such as NTAS.
- >**INPUT n** used to add line(s) to a store file ("Enter" twice ends input).
- >**DOWN n** moves the pointer down one line or specified # (n) of lines.
- >**UP n** moves the pointer up one line or specified # (n) of lines.
- >**FIND 'string'** moves down to line beginning with 'string'.
- >**VERIFY** displays all, or any part of line at terminal after processed.
- >**DELETE** deletes line or number of lines as specified.
- >**CHANGE 'old' 'new'** change characters as defined within parameters.
- >**TOP** takes pointer to the EDIT: line within the store file.
- >**END** takes pointer to bottom line within the store file.
- >**LINE n** moves the pointer to the specified line number (n).
- >**LINE 'string'** moves down to line containing the specified string.
- >**TYPE n** displays one line(s) according to line number (n).
- >**SAVE SFDEV** saves existing store file device without exiting the editor (EDIT mode).
- >**PRINT** print all the specified store file or PRINT LINE.
- >**QUIT** exits from store file editor (EDIT mode).

To rename a file in SFDEV:

- >**COPY <old\_filename> <new\_filename> sfdev**

# Switch Performance Monitoring System (SPMS) Commands

(NTP 297-1001-330, DMS-100F SPMS Application Guide)

- >**SPMS** enters the SPMS utility at the CI level
- >**SET** sets the parameters for the **DISPLAY** command
- >**SETREP** sets parameters for the SPMSREP automated log report
- >**DISPLAY** displays the index values over the last 'N' days or date
- >**DESCRIBE** used to describe the indexes you have selected
- >**EXCEPTION** displays the critical index values over the last 'N' days
- >**HELP** use help plus subcommand to get detailed parameters

Example, to get current display of SPMS report with unsatisfactory level set at 90 and unacceptable level at 80 use the following commands:

>**SET UNSATLEVEL 900;SET UNACCLEVEL 800;DISPLAY**

Example, to get a description of the INTEGFL index, use the command:

>**DESCRIBE INTEGFL**

Response = INTEGFL Basic index. Cutoffs of established calls, lost network integrity. OM:SYSPERF CINTGFL. Check NETINTEG/INTEG at the NET/ENET level of the MAP.

## DMS Scheduler (DMSSCHED) Commands

(NTP 297-YYYY-546, DMS-100F Routine Maintenance Procedures)

This tool replaced AUTOSCHED and is used to automatically execute pre-written exec file(s). Users, input file(s) and device name(s), output device(s), and start times are defined using the following commands:

- >**DMSSCHED** enters the DMSSCHED utility at the CI level.
- >**DEFINE** associates the exec file with the user and defines the output storage device (use **NOOUTPUT** if no output file is needed).
- >**START** schedules user login time, day, duration, & periodic logons.
- >**OUTPUT** names the output file and device. If not specified, then the output device is defaulted to the input device, and the output file name is generated automatically using the following format:  
<userid><month><day><hour><min>
- >**INQUIRE** displays all automatic log-in request data.
- >**CANCEL** cancels a particular automatic log-in request.
- >**STOP** forces out a disconnected user that is currently logged on.
- >**HIST** displays a history of previous DMSSCHED operations.
- >**CLEAR** clears the DMSSCHED history buffer.

**Note:** See NTP 297-YYYY-546 for an example on how to use this tool.

## Table Audit (TABAUDIT) Commands

(NTP 297-8991-303, One Night Process Software Delivery Procedures)

TABAUDIT is a table verification process that can be run prior to making an image tape or as a scheduled routine to verify office data. Table verification can be run manually using TABAUDIT or automatically by using AUTOTABAUDIT and scheduling the process. **Nortel recommends that table verification be an ongoing part of routine maintenance.**

TABAUDIT performs the following check with the DMS switch in sync:

**Generic table checks:** Performs per table verification for corruption.

**Syntax checks:** Perform per tuple verification for syntax field consistency.

**Table specific checks:** Performs per tuple verification for data consistency.

**WARNING:** TABAUDIT can take up to 10 hours or more to run and should not be run same time as TABXFR or an image dump.

**SUGGESTION:** Review any service bulletins and notices before attempting to correct any table data errors.

- >**TABAUDIT** enters TABAUDIT directory at CI level.
- >**AUTO** used to enter AUTOTABAUDIT from TABAUDIT.
- >**INCLUDE** used to setup one table or a range of tables to be checked; including failed tables from last check or changed tables since last check.
- >**EXCLUDE** used to exclude tables; NODR option used with the EXCLUDE excludes all dump and restore tables.
- >**TIMEFRAME** a AUTOTABAUDIT command used for scheduling.
- >**STATUS** displays included/excluded table range.
- >**REPORT** used to generate data integrity reports based upon specified options (use HELP REPORT to see options).
- >**CLEAR** clear included tables or specified failed table.
- >**EXECUTE** used to start verification and a device to store data.
- >**INFO** information about TABAUDIT.

# LOGUTIL Info, Control, Routing, and Devices Commands

(NTP 297-1001-129, Input/Output System Reference Manual)

**Note:** LOGUTIL should only be used as a temporary measure for log control. Tables LOGCLASS, LOGDEV, and TERMDEV should be used for permanent control of logs. Unless there is a clear understanding of the use of the following commands and the potential loss of log reports, they should not be used.

**Note:** See the **REMLOGIN** command within the Tier II Support Tools area of this QRG.

- >**HELP LOGUTIL** lists LOGUTIL commands.
- >**LOGUTIL** access to LOGUTIL commands.
- >**QUIT** or **LEAVE** quits LOGUTIL.
- >**ADDCLASS** adds output report classes to specified primary IOD.
- >**ADDRP** adds more reports to specified primary IOD.
- >**BACKUP** assigns alternative IOD to back up primary IOD.
- >**CLASS** assigns report class #'s to specified output reports.
- >**CONTEXT** allow the user to change the context of applicable nodes without having to use the REMLOGIN command (use **LISTNODES** command for list of nodes).
- >**DELCLASS** deletes specified report classes with specified IOD.
- >**DELDEVICE** deletes specified IOD from receiving log reports.  
Note: Must use **STOPDEV** command first.
- >**DELREP** deletes specified report(s) from specified IOD.
- >**LISTDEVS** displays status of each IOD associated with log system.
- >**LISTREPS SPECIAL** displays a list of special log reports that have special routing or thresholding, and those suppressed.
- >**LISTREPS SYSLOG** displays only syslog reports.
- >**LISTREPS CLASS** displays a list of reports by log class.
- >**DUMPLGDS** <logname> <log number> display specified log reports in a buffer in the chronological order as they were generated.
- >**LOGTRACE ON/OFF** <logname and number> turns ON/OFF the traceback feat. (**a LOGT is generated for each rep**).
- >**RENUMBER** assigns a report # to all report types not assigned.
- >**LISTROUTE** displays specified report classes, report names, and IOD, by CLASS, DEVICE, or REPORT.
- >**LISTNODES** list all nodes in the switch.
- >**LISTTIME** displays log reports on a threshold reset schedule.
- >**LISTLOGS** list all lognames, except **SECRET** lognames.
- >**RESET** resets to zero all threshold values that were applied.  
by **THRESHOLD** and resumes **SUPPRESS** reports.
- >**REROUTE** reroutes reports from primary IOD to backup IOD.
- >**RESETROUTE** restores the temporary routing of output reports.
- >**RESUME** resumes the output reports previously suppressed.
- >**START** starts log reports to specified device.
- >**STOP** stops printing of reports on specified device.
- >**STOPDEV** stops the output of reports to the specified device(s).
- >**STARTDEV** starts the output of reports to the specified device(s).
- >**SUPPRESS** suppresses specified output reports.
- >**THRESHOLD** sets a threshold value for specified report(s).
- >**TIMERESET** sets a time value for the threshold counter.

## LOGUTIL Log Browsing Commands

(NTP 297-1001-129, Input /Output System Reference Manual)

**Note:** See the **REMLOGIN** command within the Tier II Tools area of this QRG.

- >**OPEN** access to display log subsystem or SYSLOG buffers.
- >**FIRST** displays oldest report in the current log subsystem.
- >**LAST** displays most recent report in current log subsystem.
- >**FORWARD** <number or ALL> displays report(s) after current one.
- >**BACK** <number or ALL> displays report(s) before current one.
- >**CLEAR** deletes all reports from specified log subsystem buffer.
- >**FORMAT** queries or sets the NORMAL or SHORT format in which output reports will be printed.
- >**TYPE** re-displays the report in the current log subsystem.  
buffer that was previously displayed by commands **LAST**, **FIRST**, **BACK**, and **FORWARD**.

## DMSMON Commands

(NTP 297-1001-318, Service Problem Analysis Administration Guide)

**CAUTION:** The RESET command deletes all accumulated data.

>**DMSMON** access to DMSMON commands from CI level.  
>**HIGHLOGS** displays the 20 logs most frequently issued.  
>**LOGCOUNT** counts log occurrences.  
>**LOGBUFFER** dumps the TRAPS, SWERRs, and MM buffers.  
>**HIGHPARMS** displays the high watermarks for office parameters.  
>**HIGHCPOCC** displays high-water CP occupancy (non-BRISC).  
>**HIGHCAP** displays high-water CP CAPacity (BRISC only).  
>**RESTARTINFO** reports number of restarts and associated downtime.  
>**PMCONFIG** displays the PM configuration.  
>**EQPCOUNTS** displays the office equipment counts.  
>**MEMORY** displays memory usage information.  
>**PMLOADS** displays the PM loads currently available.  
>**ASSESS** displays normalized peg counts per 10,000 calls.  
>**OMS** counts major OM peg information.  
>**COUNT** executes the count procedures for switch equipment.  
>**NEWPATCH** lists the new patches applied to the switch.  
>**OPR** displays an office performance report.  
>**DBLOCKS** displays digit block counts for various digilator tables.  
>**DUMPALL** dumps all DMSMON data.  
>**IBNEXPCT** counts free tuple spaces in table IBNXLA internal table.  
>**RESET OMS** resets the OMs to 0.  
>**RESET LOGCOUNT** resets the log counts to 0.  
>**RESET RESTARTINFO** resets the number of restarts to 0.  
>**RESET NEWPATCH** resets the new patch date to the current date.  
>**RESET ALL** resets OMs, logcount, restartinfo, and new patch.  
>**QUIT or LEAVE** leave or quit DMSMON level.

## DISPCALL Commands

(TAM-1001-003 DISPCALL User Guide)

**Note:** Call deaths produce AUD395, AUD398, and some AUD4XX log messages. DISPCALL can save call deaths and make data representation easier to understand.

>**QUIT** exits DISPCALL level.  
>**CLEAR** clears DISPCALL buffers.  
>**DEATH [PUP|SEARCH] <ON|OFF>** toggles on/off to save call deaths;  
PUP can be specified to save protected/unprotected data for the  
agents in the call; SEARCH can be specified to search for agents  
linked to the call but not appearing in any part of the call.  
>**DISPTID <node #> <terminal #>** verifies node and terminal number.  
>**FREE** deallocates and frees the buffers.  
>**QUERY** displays the number of buffers allocated and the number of buffers in use; also displays current setting of DEATH parameters.  
>**SAVELEN <len>** takes a snapshot of the call on which the given line is currently active.  
>**SAVETID <node #> <terminal #>** takes a snapshot of the call on which the given terminal is currently active.  
>**SET <type> <num>** allocates buffers for the given buffer type.  

<b>Ranges:</b>	CCB	0-30	EXT	0-34
	CDB	0-31	PROT	0-20
	MBUFF	0-600	UNPROT	0-17

  
>**SHOW <what> <0-255> <H|F>** shows collected data for CCB, CDB, EXT, PROT, UNPROT, P1P, P2P in hex or formatted form. i.e., to show collected data for all buffers of first call death input:  
>**SHOW CALL 0 F**

## SHOWAUD Command

**Note:** This tool is used to display audit log dumps of CCBs, CDBs, and EXTs in text format. Simply specify the file name containing the audit logs and the data is then formatted and displayed.

**Note:** You might have to erase RECORDFILE in store file before using.

>**SHOWAUD <filename> <ALL>** displays audit log dumps of CCBs, CDBs, and EXTs in symbolic format.

Procedure for using SHOWAUD command:

>**LOGUTIL**  
>**RECORD START ONTO SFDEV**  
>**OPEN AUD** find AUD logs (i.e. AUD395, AUD398) using BACK and FORWARD commands.  
  
>**RECORD STOP ONTO SFDEV**  
>**LISTSF** list SF to verify that RECORDFILE exists.  
  
>**SHOWAUD RECORDFILE ALL**  
>**LEAVE or QUIT** leaves or quits LOGUTIL.

## IOC DSKUT NonMenu Commands

(NTP 297-1001-526, *Disk Maintenance Subsystem Reference Manual*)

- >DSKUT activates this command directory.
- >DISPLAYVOLS <disk number> displays information on all volumes in the specified disk (i.e., >DV 0).
- >LISTVOL <volume name> ALL lists all files owned by a user on a Disk Volume into the User Directory: (i.e., >LIV D010SCR1 ALL).
- >RENAMEFL <old filename> <new filename> renames an existing file: (i.e., >RF LOGININFO COREDATA).
- >ERASEFL <filename> erases a specified file from a disk volume: (i.e., >EF RECORDFILE).
- >CLEARBOOT <volume name> removes boot pointer previously assigned by SETBOOT command from the file that has the current image file status on the volume specified by LISTVOL: (i.e., >CB D010FCIMG).
- >SETBOOT <filename> assigns current image file status, via boot pointer to a file on the volume specified by LISTVOL: (i.e., >STB IMG\_93\_11\_16).
- >SHOWBOOT <volume name> displays the current image file on the specified volume: (i.e., >SHOWBOOT D010FCIMG).
- >SHOWFL <filename> ALL displays ALL information about a specified file name.
- >SHOWVOL <volume name> ALL displays ALL information about a specified volume name: (i.e., >SV D010FCIMG ALL).
- >COPYVOLUME <volume from> <volume to> copies all files from one volume to another (i.e., >CV D010FCIMG D010SCR1).
- >COPY <filename> sfdev copies file to SFDEV

## SLM DISKUT NonMenu Commands

(NTP 297-5001-540, *SuperNode Patching Procedures*)

- >DISKUT activates this command directory.
- >HELP (try >HELP <command> ) the DISKUT help command.
- >ALL list all within defined request.
- >FULL when used with LISTVOLS and LISTFL commands, it provides more detailed info.
- >INSERTTAPE (>IT) mounts the tape cartridge.
- >EJECTTAPE (>ET) demounts the tape cartridge.
- >LISTVOLS (>LV) lists volumes on disk.
- >LISTFL (>LF) lists files on a tape or disk.
- >DELETEFL (>DDF) deletes a file on a disk volume.
- >LISTBOOTFL (>LBF) lists the registered boot files.
- >CLEARBOOTFL(>CBF) removes a registered boot file.
- >SETBOOTFL (>SBF) adds a boot file and registers it.
- >RENAMEFL (>RF) renames a file on a disk volume.
- >BACKUP (>BA) creates backup copies of disk files on tape.
- >RESTORE (>RE) restore disk files from backup copies on tape.
- >CLEARVOL (>CVOL) clears all files on a disk volume.
- >VOLINFO (>VINFO) displays info about an INSV disk volume.
- >QUIT exits the DISKUT super command.
- >COPY <filename> sfdev copies file to SFDEV

## Supernode Loading Procedure

(NTP 297-YYYY-545 *Recovery Procedures*— PCL NTPs)

### To clear/set boot file:

1. List files on SLM from which you want to load (i.e., SLM 0):  
>DISKUT;LF s00danyname (Note: s00danyname is an example)
2. To clear boot file:  
>CBF S00D CM ALL  
>CBF S00D MS ALL
3. Set boot file:  
>SBF s00danyname<filename> CM 1 ACTIVE  
>SBF s00danyname<filename> MS 1 ACTIVE

### To load front end:

From RTIF of inactive side: (Note: if JAM'd, then 'RELEASE JAM' first)

1. >\BOOT SLM %Optional: add "T" to load from SLM tape.
2. Wait for "waiting for activity" prompt.

### From RTIF of active side:

3. >\JAM
4. >YES

Note: If loading active side, first type >\OVERRIDE from its RTIF.

### After loading completes then:

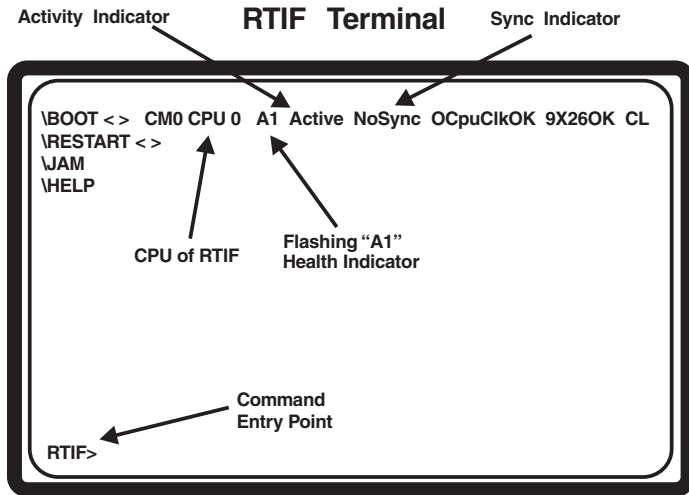

5. Place test calls to ensure that call processing is working.
6. Clear all alarms.

Note: See *RTIF Commands and Recovery* on the next page.

# RTIF Commands and Recovery

(NTP 297-YYYY-545, DMS-100 Recovery Procedures)

**Caution:** Use the following only as a quick reference. Reference the NTP for detailed procedures.

## RTIF Restart Procedure

Command Steps		
Step	Active CPU	Inactive CPU
1		\JAM
2		YES
3	<b>Only Perform if Switch is in sync</b>	
4		
5		
6	\OVERRIDE	\OVERRIDE
7	\RESTART <type>	\RESTART WARM
8	YES	YES * Immediately proceed to step 6
<b>Watch For</b> <ul style="list-style-type: none"> <li>Restart is complete when 'A1' flashing on active RTIF terminal.</li> <li>Maximum Time to 'A1' flashing = 3 mins.....Processor Dependent.</li> </ul>		

## RTIF Boot Procedure

Command Steps		
Step	Active CPU	Inactive CPU
1		\JAM
2		YES
3	<b>Only Perform if Switch is in sync</b>	
4		
5		
6	\OVERRIDE	\OVERRIDE
7	\BOOT <SLM0, SLM1, SLM0T, SLM1T>	\RESTART WARM
8	YES	YES * Immediately proceed to step 6
<b>Watch For</b> <ul style="list-style-type: none"> <li>Restart is complete when 'A1' flashing on active RTIF terminal.</li> <li>Maximum Time to 'A1' flashing = 20 mins.....Processor Dependent.</li> </ul>		

## AMADUMP Commands

(NTP 297-1001-570 & NTP 297-YYYY-545)

- >MAPCI NODISP;MTC;IOD;DIRP;QUERY AMA  
Shows active volume. (Repeat query to verify AMA collection).
- BEWARE:** in a very busy office, a very large file can be generated from AMA calls after entering the next command.
- >RECORD START FROM <active vol.> ONTO <scratch vol.>  
Make test calls to generate desired AMA record(s).
- >RECORD STOP FROM <active vol.> ONTO <scratch vol.>
- >DSKUT;LISTVOL <scratch vol.>  
List RECORDFILE on associated scratch volume.
- >AMADUMP <format—BC or NT> RECORDFILE  
Gives AMADUMP prompt.
- >FILTER ADD '00<structure code>'  
Prompts for characteristics for filter—enter blank carriage returns except for desired refinements (“\$” to end).
- >FILTER ADD '10<structure code>'  
Repeat with same refinements.
- >FILTER ENABLE
- >DUMP CALL DETAILS use >HELP DUMP for details.  
**Note:** If a filter is not used, then type:  
>DUMP CALL DETAILS <from block> <# blocks>

## CALLDUMP CI: Level Command

Outputs billing records using same format as AMADUMP. Records are dumped directly from CCs internal call record buffer rather than the DIRP file. CALLDUMP is safe to use and has little impact on real-time usage.

>CALLDUMP <stream name (default=AMA)> <format=HEX or FULL>

To dump records from previous CALLDUMP command:

>CALLDUMP PREVIOUS

## Mag Tape (9 Track) Commands

- >DEMOUNT <drive #> demount a 9 track mag tape.
- >MOUNT <drive #> mount a 9 track mag tape.
- >REMOUNT <drive #> remount a 9 track mag tape.
- >RSETVOL vol\_name used to reset an INERROR volume
- >TAPE (X) DEMOUNT force release a 9 track tape.

## AFT and RASL Commands

The following AFT directory commands are used to query and manipulate the Automatic File Transfer (AFT) System. AFT automatically transfers files recorded by DIRP.

- >AFT enter Automatic File Transfer (AFT) utility.
- >QUERYAFT query information about AFT files.
- >QUERYMNP query MNP information.
- >SETAFT set the next AFT file to transfer.
- >SETOVR set an Override file transfer.
- >RESETPFT resets PFT information on a file.
- >RESETOVR resets the Override file pointer.
- >COPYAFT copy an AFT file to tape.
- >DELAFT delete a file from DIRPHOLD and the directory.
- >STARTAFT starts the AFT system transferring files.
- >STOPAFT stops the AFT system transferring files.
- >QUIT quit out of the AFT utility.

The following robust application and session layer (RASL) directory commands are used to manipulate network connections. They are used to terminate and re-enable a network connection. They also are used to disable a network connection for datafill changes, and summarize operational network connections. See table RASLAPPL for parameters that make the commands available.

- >RASL enter RASL utility.
- >RASLCLOSE manually closes a network connection.
- >RASLSTOP disables a network connection.
- >RASLSTART re-enable a network connection.
- >SHOWRASL display a summary of all network connections.

# TRAVER Commands

(NTP 297-1001-360, Basic Translations Tools Guide)  
(NTP 297-YYYY-350, Translations Guide)

The **TRAVER** command simulates a call and displays the translation and routing tables the call accesses.

**Note:** The following information is an overview of TRAVER and provides only samples of the many variables that are possible using TRAVER. Use **HELP TRAVER** at CI level for details. Also, see the **REVLXER** command within this QRG.

```
>TRAVER L <digits> [T,NT,B]      %% see Notes & Trace Option
      TR <cli> [T,NT,B]
      TR <cli> <digits> <RPOA/RPOAS> [T,NT,B]
      C <console> [T,NT,B]
      V <vfg> [T,NT,B]
      R <table> [T,NT,B]
      L <digits> <bc> <64kdata/56kdata> [T,NT,B]
```

**Notes:** 1. For digits—"\*" substitute a 'b'—for a '#' substitute a 'c'.  
2. For ISDN, bc = bearer capability.  
3. For DMS PH, RPOA = registered private operating agencies.  
4. T = [authcode] [mfst] [billno] [bill\_mfst].  
5. NT = (includes routing and digit information).  
6. B = both T and NT options.

## Trace Options

The "T" option uses parallel software to simulate a call and display the tables used to translate and route a call along with the appropriate tuple for each table. The "NT" (no trace) option has its own setup processor which calls translation utilities to determine a result. This option displays digit translation routes, position routes, and the circuits and/or treatments on which the call would terminate. The "B" option invokes both the T and the NT option and displays both the call's route & treatment.

## Optional Parameters

<authcode> for tracing LATA Equal Access System (LEAS) calls, mfst, billno, and bill\_mfst parameters are needed; enter nil value (N) for authcode before specifying other optional parameters.  
<mfst> indicates the type of signalling on the trunk, the called number MF start signal. A LEAS call cannot be properly traced without this parm.  
<billno> is the number to be billed (an information digit plus the calling digits). A LEAS call cannot be properly traced without this parameter.  
<bill\_mfst> indicates the type of signalling on the calling number trunk; a call involving LEAS cannot be properly traced without this parameter.

## Line TRAVERS

```
>TRAVER L <calling_dn> <called_dn> [T,NT,B]
>TRAVER L <ISDN_dn> <bc> [T,NT,B]
>TRAVER L <calling_dn> <called ISDN_dn> <bc> <bc_name>
[T,NT,B]
```

## Trunk TRAVER

```
>TRAVER TR <CLLI> <digits> [T,NT,B]
```

## Console TRAVER

```
>TRAVER C <console CLLI> <digits> [T,NT,B]
```

## Virtual Facility Groups TRAVERS

```
>TRAVER V <vfg> <digits> [T,NT,B]
>TRAVER L <calling_dn> <called_dn> [T,NT,B] RTEVFG ALL
```

## ISDN TRAVERS

Bearer Capability Routing example travers:

```
> traver l 4844015 94834035 bc 64kdata b      % for BC 64kdata calls
> traver l 4844016 94834036 bc 56kdata b      % for BC 56kdata calls
```

Some PRI routing examples: (PUBLIC call type is traver default)

```
> traver tr PRITEST1 n cdn e164 19192384567 b % NPI:E164, NSF:nil, call
type:PUBLIC
> traver tr PRITEST2 n cdn e164 2831199 prvt b % NPI:E164, NSF:PRVT, call
type:PriVaTe
> traver tr PRITEST3 n cdn pvt 095 tie b      % NPI:PVT, NSF:TIE, call
type:PriVaTe
```

**Note:** The type of number (TON) is in the "Called Party Number" and "Calling Party Number" information element. According to the Nortel PRI protocol specifications, when the NPI is "Private" the TON is "Subscriber." When the NPI is "E.164," the TON is based on the number of digits dialed as follows:

- less than 10 digits: TON is "Subscriber" (Local)
- exactly 10 digits: TON is "National" (NATIONAL)
- more than 10 digits: TON is "International" (INternational)

## Wireless LWW Traver

```
>traver mx moborig 6905 5415222 b      %%6905 see table MTXTRAV
                                         %%5415222 use QHLR command
```

## CLASS Quick References

(NTP 297-1421-503, *Subscriber Services Maintenance Guide*)  
(NTP 297-YYYY-350, *Translation Guides*)

**NOTE:** See page 100 for the DRAMREC Utility and subcommands that can be used to manage CLASS announcements on DRAMs and EDRAMs.

### REVLVER CI: Level Command

This is a datafill verification utility that simulates reverse translations from a specified origination to a specified destination.

**Note:** If no netname is specified, then the default of public is used.

#### REVLVER Command and Variables:

```
>REVLVER <SUB> {AR <DN> STRING
                        <DIGITS> STRING
                        <TRACE> {T,
                                NT,
                                B}
                        [<NETNAME> STRING]
                        [<COMPARE> STRING],
ACB <DN> STRING
    <DIGITS> STRING
    <TRACE> {T,
            NT,
            B}
    [<COMPARE> STRING],
DDN <DN> STRING
    <DIGITS> STRING
    <TRACE> {T,
            NT,
            B}
    [<NETNAME> STRING]
    [<INTL> STRING],
R <DIGITS> STRING
  <RXLANAME> STRING,
RLT <DN> STRING
```

#### REVLVER Example:

```
>REVLVER AR 6750009 9196752034 B
TABLE IBNLINES
  HOST 00 0 02 17 0 DT STN IBN 6750009 EBS01 0 0 360 (ACB) (AR)$
TABLE CUSTNTWK
  EBS01 PUBLIC 24 (PUBLIC MDCAR 10) (CLID OFFNET)
TABLE DNREVLXLA
  MDCAR 919 919 (LOCAL 3 9 N)
TABLE DNREGION
  LOCAL 919675 919675 (Digits used to call 9196752034 from 6750009)
```

### CNAMDVER CI: Level Command

This command allows us to check the name and the permanent privacy status associated with the name at the SCP database without making an actual call.

```
>CNAMDVER <Calling Number (10 digits)> STRING
          <Calling Number Presentation (0-allowed, 1-restricted)>
          {0 TO 1} [<Timeout (in seconds)> {0 TO 255}]
```

### QSL CI: Level Command

The CI level command QSL provides detailed lists for each Screening List Editing (SLE) feature on a specified line. The line can be specified by either DN or LEN. One or all features can be specified. When parameter ALL is selected, information is given in FULL format; when one feature is specified, the subscriber can select FULL or HEX format.

```
>QSL <dn or len> <SLE feature name or ALL> <FULL or HEX>
```

### TESTAME CI: Level Command

Test Analog Display Services Interface (ADSI) support command.

```
>TESTAME <Application> <Function> <Directory Number>
```

### MAKERES Utility

This command converts POTS lines to RES lines over a given range of LENs. Subcommands are **CONVERT**, **DELOPT**, **COPY**, & **CHECKCM**.

**CLASS commands continue on the next page.**

**CLASS commands continue.**

### **CLOG Utility and Subcommands**

This command displays the contents of a call logging subscriber's incoming callers list for a given DN. Subcommands are **STATUS**, **RESET**, **DEQ**, and **QUEUE**.

**>CLOG**

**CLOG:**

**<subcommand> <requestee dn>**

### **QBCLID CI: Level Command**

This command displays every line in the office that belongs to a BCLID group.

### **QCM CI: Level Command**

This command displays the contents of CLASS incoming and outgoing call memory.

**>QCM <directory number> or <line equipment number> <F or H>**

F = formatted or H = hex

### **SERVORD CNAMDACG Command**

This SERVORD command displays the internally stored list of active CNAMDACG six-digit acg code controls, including associated gap interval, duration interval, and time remaining for the code control.

### **SERVORD CHL Command**

SERVORD command used to change SLE list information.

## **CLASS References**

### **CLASS related OM Groups:**

## Table Editor Commands

(NTP 297-1001-360, Basic Translations Tools Guide)

**Note:** In addition to the Table Editor commands below, see the **FINDTAB**, **FINDREF**, **SHOWUSES**, and **SHOWUSERS** commands under “DMS CI: Level Commands” within this QRG.

- >HELP** use **HELP <command>** to get command description.
- >ABORT** used to cancel a command or input.
- >REPlace** used to replace a specified tuple with a new tuple; user is prompted for field values or field values may be specified (i.e., **REP <field 1> <field 2> <field 3>**).
- >ADD** adds tuple(s) to a table.
- >DELeTe** deletes a tuple from a table.
- >CHAngE** changes the value of existing field data for a tuple.
- >CHECK** displays next **<COUNT>** tuples or **ALL** tuples
- >SUBtable** enters subtable. Parameter not required if only one subtable.
- >RETurn** exits back from a subtable in a previous level.
- >OVerride** **CAUTION:** This command cancels the system prompt when a “NO JF AVAILABLE” and/or “MACHINES OUT OF SYNC” condition exists.
- >VERIFY** **CAUTION:** This command turns on/off the system prompt for verification and confirmation when altering table data.
- >COUNT** without parameters displays the number of tuples in a table.
- >COUNT <parameters>** count number based upon the following parms:
  - &** = And      **EQ** = Equal to      **GT** = Greater than
  - GE** = Greater than or equal to      **NE** = Not equal to
  - LE** = Less than or equal to      **LT** = Less than
- EX: **>TABLE LINEATTR**
- >COUNT (PRTNM EQ POTS)**
- Note:** Counts the tuples with a pretranslator name equal to POTS.
- >FORMAT PACK** defines the format to be printed/displayed at 130 lines per character—ignores CUSTFLDS table.
- >FORMAT UNPACK** defines the format to be printed/displayed at 70 lines per character as defined in CUSTFLDS table.
- >LIST** displays tuple(s) within a table; to LIST examples, enter:
  - >LIST <number of tuples to list>** or **>LIST ALL**
  - >LIST <condition>** %see count parameters
- >HEADING** displays heading line without a tuple display.
- >DOWN** moves cursor down specified number of tuples in the table.
- >NEXT** positions to next tuple in table but does not display it.
- >UP** moves cursor up the specified number of tuples in the table.
- >PREV** positions to the previous tuple but does not display it.
- >POSition** positions the cursor at a specified tuple in the table.
- >DISPlay** displays the tuple entry for the current tuple.
- >LOCate** locates tuple by field(s) but does not display (see DISPlay).
- >RANge** displays the table heading field(s) by number and/or name plus parameter type(s) with a sample of valid inputs.
- >INForm** displays the current table name.
- >TOP** positions on the first tuple in the table and displays it.
- >FIRST** positions to first tuple in table but does not display it.
- >BOTtom** positions on the last tuple in the table and displays it.
- >LAST** positions on the last tuple in the table but does not display it.
- >LEAVE** exits current table (or number of levels specified, i.e., ALL).
- >POF** enters the Pending Order (PO) subsystem (see following).

## Pending Order Subsystem

(NTP 297-1001-360, Basic Translations Tools Guide)

The commands available in the Pending Order (PO) subsystem include:

- >ACTIVATE** activates POs.
- >CREATE** enters the file name of any previously produced DMO file in the PO subsystem.
- >DELETE** use to delete the POF and SFDEV file.
- >DISPLAY** Use the DISPLAY command to display the contents of all or specified POs in the PO subsystem by either the due date or sort option, which uses the parameters TIME and POF.
- >HELP <cmd\_name>** Use HELP command to display a brief functional description of desired PO subsystem command.
- >LEAVE** leave the Pending Order Subsystem.

### Other Supporting Commands:

- >DUMPTAB** used to move table(s) into SFDEV for manipulation by user.
- >DMOPRO** activates/applies the SFDEV file to switch translations.
- >DMOVER** verifies the DUMPTAB SFDEV file and checks it for errors.
- >INPUT** replaces table tuples by looking for (a) key field(s) match.
- >PUT** add or replace tuples in a table if there is no matching key field or fields already in the table. It will replace a tuple if it finds a matching key field or fields.

## DLOG Commands

(NTP 297-YYYY-545 or NTP 297-YYYY-350 — PCL NTPs)

**Note:** DLOG (Disk LOG) utility can be used to retrieve logs.

- >**DLOG** enters DLOG utility      >**QUIT** exits DLOG utility.
- >**EXCLUDEALL** removes all logs, except PROTOLOGS from the set of logs to be formatted. %% start out by excluding all logs or it will dump out too many logs in the out file. See the EXCLUDEPROTO subcommand.
- >**INCLUDEALL** resets the set of logs to format to all logs except PROTOLOGS. See INCLUDEPROTO subcommand.
- >**EXCLUDE** accepts logs, except PROTOLOGS, to EXCLUDE from format executed by FORMAT subcommand. See the EXCLUDEPROTO subcommand.
- >**INCLUDE <logs>** accepts logs, except PROTOLOGS, to INCLUDE in format executed by FORMAT subcommand. (i.e., >**INCLUDE ISDN PM** or >**INCLUDE PM 189**) See INCLUDEPROTO subcommand.
- >**INCLUDEPROTO & EXCLUDEPROTO** commands removes or excludes all PROTOLOGS (TRAP, SWER, INIT, etc.) from the FORMAT subcommand execution.
- >**STATUS** displays the logs and PROTOLOGS INCLUDED/EXCLUDED, earliest valid start time and previous use information.
- >**FORMAT** accepts parameters for date/time range and “tofile” such as SFDEV, or “to terminal” to appear on screen.
- >**FORMATFILE** accepts filename of unformatted DLOG file to format.
- >**LISTFILES** displays the raw DLOG files recorded in the internal table with their start times and end times.
- >**PRINT <formatted filename>** print a copy of “tofile” in FORMAT.

## Post-Release Software Manager (PRSM) Quick References

(NTP 297-8991-540, *Post-Release Software Manager (PRSM) Ref. Guide*)

(NTP 297-8991-541, *PRSM Basic Commands, Syntax, and Examples (with PATCHER Command Comparison)*)

(NTP 297-8991-542, *PRSM Quick Reference Guide*)

### Post-Release Software Updates (PRSU) Statuses

**Note:** Patches are called PRSUs.

PRSM assigns a status to each PRSU on every DEST (destination). There are five different PRSU statuses.

- NV - Needs Validating**—indicates a PRSU needs validating in the DEST.
- VA - Validated for Application**—indicates PRSU can apply in the DEST.
- A - Applied**—indicates the PRSU is currently applied in the DEST.
- R - Removed**—indicates the PRSU has been removed from the DEST.
- NN - Not Needed**—indicates the PRSU is not needed in a DEST.

**Note:** A valid SPM non-permanent PRSU will have an NN status against an SPMLOAD destination with the same loadname.

### PRSU EXTENSIONS Using the Format 'AAANNTaa'

AAANN = baseid, AAA=alpha, NN=numeric

T = Processor Type:	B - BRISC	C - SUPERNODE
	P - POWERPC	I - ISN
	X - XPM	S - SPM

aa = Patch Release      aa = alphanumeric)

### Which PRSU files to keep/erase

CM, XACM and ISN (Intelligent Service Node) PRSU files, once applied, are not required in order to remove the PRSU from the device. All of these device types are capable of being imaged manually or automatically with all the patches applied so re-applying PRSUs after reloading is not required. Therefore, these files can be erased after being imaged to clean up disk space and also reduce the time taken by the nightly file audit. The one exception to this is ISN PRSUs during an office upgrade. The ISN DESTs are loaded with the new release load and patched before the XACM or CM is upgraded. It is recommended to keep these ISN PRSU files on disk until after the XACM or CM has been upgraded to the new load and the new PRSM has validated the PRSU files. The files can then be removed since the new PRSM will now have captured the information needed from the PRSU files. If retaining the ISN PRSU files is desired, it is recommended that the files be placed in a volume not datafilled in table PADNDEV.

**Continues on the next page.**

XPM and SPM PRSU files need to be kept on disk for as long as the PRSU is at applied status. This is because the PRSU file is always required in order to remove the PRSU from a DEST, and to automatically re-apply the PRSU following a reload or RTS of the device. Any applied XPM or SPM PRSU will have a file alarm raised if PRSM is unable to locate the PRSU file. If the applied XPM or SPM PRSU file is moved, it is recommended that the PRSU be validated following it being moved so the alarm will not be raised.

### Missing PRSU Files

For situations where the current PRSM discovers PRSUs that have been applied by another instance of PRSM (for example an LIU7 patched image from another switch loaded into the LIU7), it is important that PRSM validate the PRSU files. PRSUs in this situation can display “???” for the category field. If this situation is encountered, retrieve a copy of the PRSU file and validate the PRSU in one of the DESTs that shows a category of “???”. PRSM will then take the information from the PRSU file and place it in the PRSM database and the category will change to what it is supposed to be.

**Note:** The above procedure can be avoided if all of the PRSU files are located, placed in the users search patch, and a dbaudit is performed following loading of the DEST with the patched image. The dbaudit will find the PRSU files and immediately populate the PRSM database with the missing information. Dbaudit is only capable of doing this on the first attempt. If there are category “???” present in the PRSM database, then it is too late for the DBAUDIT command to correct the situation. Validating with the PRSU file is the only way to get the category to the correct value.

### OBSolete/OBsolete Emergency (OBS/OBE) PRSUs at VA status

An OBS or OBE PRSU can be found at VA status. This is normal and not a cause for concern. When a PRSU changes category to OBS or OBE, PRSM needs to be informed. This occurs when a file with a file name of <PRSUID>\$DF is downloaded and validated. This file is just the administration section of the patch and is erased after validation automatically. If the PRSU has already been removed when this occurs, the patch transitions from R to VA, the category goes from what it was (General (GEN) for example) to OBS or OBE, and AUTO APPLY (AUTOAPP) goes to N. *The only way to get the OBS/OBE PRSU back to R at this point is to apply it and then remove it — which is NOT RECOMMENDED.* The process requires that the OBS/OBE PRSU file be removed from the site after removal from all DESTs in the office so an accidental apply cannot occur.

**Note:** For XPM PRSUs the category will not change to OBS or OBE since the only two categories allowed for XPM PRSUs are SouRCe (SRC) and MANual (MAN). However, the AUTOAPP field will be N following validation of the obsolete \$DF for XPM PRSUs.

### SPM loadfile destinations

When an SPM loadfile is datafilled in table PMLOADS, a destination is added to the PRSM database with the type of SPMLOAD. The SPM permanent PRSUs associated with the SPMLOAD are placed in the PRSM database during a dbaudit of the SPMLOAD. These PRSUs are contained within the load file and cannot be removed from the SPMLOAD DEST (hence the designation permanent).

The DBAUDIT command can be issued manually following adding of the loadfile to PMLOADS, but this is not required since the nightly status audit will perform a dbaudit on all SPMLOAD DESTs in the office.

An SPM loadfile which contains non-permanent (and thus removable) PRSUs is called a Pre-Patched Spectrum Load (PPSL). The filename of a PPSL has 2 characters (a letter followed by a number) appended to the 14 character milestone file name. The DESTID in PRSM will only refer to the 14 character loadfilename for both milestone and PPSL files.

To determine what non-permanent PRSUs are resident in a PPSL, the SPMLFINFO command can be used. For a PPSL there is an additional permanent PRSU which contains a list of the resident non-permanent PRSUs in its description text. The naming convention of this permanent PRSU starts with “SPPSL” followed by the 7 character loadname of the given SPM load. A space separated list of removable PRSUs contained within the load will be displayed in the description section of this PRSU. An example command line would look like:

**>spmlfinfo cem16cm\_010064a2 qprsu SPPSLCEM16CM**

It is recommended that the PRSU files associated with the contained removable PRSUs be located and validated before the PPSL is datafilled in table PMLOADS, but validation can be done after. Note that a validation of the given SPM PRSU file must be performed and the file must be available in order to remove the PRSU.

**Note:** A PPSL is the same as the milestone load with the patches already applied. It behaves the same as the milestone load with the patches applied via PRSM. Therefore, there is no reason (under normal circumstances) to upgrade from a milestone load to the PPSL version. Simply datafill the PPSL in PMLOADS to be prepared for any future reload from disk (manual or system).

**PRSM Quick References continue on the next page.**

## PRSM Basic Commands, Syntax, and Examples (Reference NTP 297-8991-541)

PRSM Command with Syntax	PRSM Examples	Example Description
<b>APPLY</b> APPLY <prsu_set_def> [<IN dest_set_def>]	1. APPLY scb05ib5 2. APPLY xsb00x05 3. APPLY xsb00x05 IN dtc 0 4. APPLY 'scb05ib5   jpp28cb5   xsb00x05	1. Applies an ISN PRSM in all applicable DESTs. 2. Applies an XPM PRSM in all applicable DESTs. 3. Applies an XPM PRSM in both units of DTC 0. 4. Applies three PRSUs with one command.
<b>VALIDATE</b> VALIDATE <prsu_set_def> [<IN dest_set_def>] [<NODB>]	1. VALIDATE dmn01ib5 2. VALIDATE xmn01x05 IN ltc 0 0 3. VALIDATE 'prsus where status = nv	1. Validates an ISN PRSU against all DESTs. 2. Validates an XPM PRSU in LTC 0 unit 0. 3. Validates all PRSUs with a status of NV.
<b>DISADMIN</b> DISADMIN <prsu_set_def>	1. DISADMIN dmn01ib5 2. DISADMIN 'scb05ib5   jpp28cb5   xsb00x05	1. Displays information on an ISN PRSU. 2. Displays information on three PRSUs.
<b>SELECT</b> SELECT <fields> FROM PRSUSET <prsu_set_def> SELECT <fields> FROM DESTSET <dest_set_def> SELECT <seldef_name>	1. SELECT prsuid status FROM PRSUSET prsus + 'where status = r on rcc 4 0 2. SELECT prsuid appdate destid FROM + PRSUSET 'prsus where appdate < 19960101 3. SELECT informlist 4. SELECT alldests 5. SELECT prsuid status category destid FROM + DESTSET DESTS 'where destid = dtc	1. Generates a report on the removed PRSUs in RCC 4 unit 0. 2. Generates a report on all PRSUs applied before January 1, 1996. 3. Generates a report on all CM, ISN, and XPM PRSUs. 4. Generates a report on all DEST information. 5. Generates a report with the specified fields on PRSUs in all DTCs.
<b>REPORT</b> REPORT PRSU <PRSU name> REPORT DEST <destid> REPORT DATE <yyymmdd> REPORT DATE <yyymmdd> REPORT MODULE <module name> REPORT DEPEND <PRSU name>	1. REPORT PRSU jpp28cb5 2. REPORT PRSU jpp 3. REPORT DEST ms 0 4. REPORT DATE 970310 REPORT DATE 19970310 5. REPORT MODULE Instart 6. REPORT DEPEND map08cr9	1. Outputs information on an individual PRSU. 2. Outputs information on all PRSUs with initials JPP. 3. Outputs information on DEST MS 0. 4. Outputs information on all PRSUs applied on or after March 10, 1997. 5. Outputs information on all PRSUs applied to a specific module. 6. Outputs information on all PRSUs that depend on a specific PRSU.
<b>DBAUDIT</b> DBAUDIT [<dest_set_def>]	1. DBAUDIT 2. DBAUDIT rcc	1. Compares all destination databases with PRSM database and updates discrepancies. 2. Database audit all RCCs in the office.
<b>ISTBAUDIT</b> ISTBAUDIT [<dest_set_def>]	1. ISTBAUDIT spm 2. ISTBAUDIT spm 5 cem 1 3. ISTBAUDIT ltc 8	1. Audits all SPM dests and applies or removes PRSUs to each device as required. 2. Audits SPM 5 CEM 1 and applies or removes PRSUs to it as required 3. Audits the active and inactive sides of LTC 8 and applies or removes PRSUs
<b>ASSIGN</b> ASSIGN <field_name> <field_value> IN <prsm_set_def>	1. ASSIGN active y IN PRSUSET scb00cb5 2. ASSIGN active n IN PRSUSET scb00cb5	1. Activates an activatable PRSU. 2. Deactivates an activatable PRSU.
<b>REMOVE</b> REMOVE <prsu_set_def> [<IN dest_set_def>]	1. REMOVE xsb00x05 2. REMOVE scb05ib5 IN ms 0 3. REMOVE 'prsus where category = dbg	1. Removes an XPM PRSU from all XPMs. 2. Removes an ISN PRSU from MS 0. 3. Removes all debug PRSUs.
<b>ASSIGN</b> ASSIGN <field_name> <field_value> IN <prsm_set_def>	1. ASSIGN upgrade _ld eli06bh IN DESTSET ltc 0 0 2. ASSIGN aor n IN PRSUSET xzs69x06	1. Used to change loadname during XPM upgrade on LTC 0 unit 0 to ELI06BH. 2. Apply on reload field changed to "N". PRSU will not apply after reloading.

### **Patching After Loading (PAL)**

Following a reload of an XPM device, PAL is invoked. The patches to be applied are chosen by the status of the Apply On Reload (AOR) flag. If the AOR flag is set to Y for any XPM DEST with the given loadname in the office, then the PRSU will be reapplied following the reload. If the AOR flag is set to N for all XPM DESTs with the given loadname, then the PRSU will not be re-applied. Anytime a PRSU is applied to an XPM device, PRSM automatically sets the AOR flag to Y for that PRSU on that DEST. Conversely, anytime a PRSU is removed from an XPM device, PRSM automatically sets the AOR flag to N for that PRSU on that DEST. The AOR flag can also be set manually using the ASSIGN command. For example, if one wanted to soak a PRSU in one DEST and did not want it to be re-applied following a reload, just set AOR to N for the entire office:

**>assign aor n in prsuset abc04x17 on xpm**

PRSU abc04x17 will not be re-applied to any device following a reload.

### **SPM Patching After Return To Service (SPARTS)**

Whenever an SPM destination is brought into service, the SPM maintenance software sends a request to PRSM to execute SPARTS. SPARTS will compare the patch content in the running device with the patch content associated with the given loadname and remove/apply patches to bring the device up to date patch-wise if required. What PRSUs are removed/applied is based upon the AOR flag just like PAL in XPMs. If the AOR flag is set to Y for any SPM DEST with the given loadname in the office, then the PRSU will be re-applied following the RTS if required. If the AOR flag is set to N for all SPM DESTs with the given loadname, then the PRSU will not be re-applied and in fact will be removed if found applied. PRSM similarly automatically sets the AOR flag to Y/N for a given PRSU on a given device upon application/removal just like in the XPM case.

The steps SPARTS performs are the same as the steps performed by the ISTBAUDIT command on an SPM device:

1. Query the SPM device whether or not a reload has occurred. If a reload has occurred, then continue on to the next step. If not, then inform SPM OAMP software that the patchfail is cleared and exit.
2. Run a dbaudit on the specified destinations to sync the destinations with the PRSM database.
3. Remove any extra PRSUs applied to the specified destinations as determined by the AOR flag (see above). This situation may occur with a Pre-patched SPM load (PPSL) that contained an unwanted PRSU or a device reloading from a stale flash image.  
**Note:** There is a time delay following removal (or application) of a patch to an SPM device before the patched image is copied from RAM memory to flash memory. If an SPM device reloads from flash memory during this time delay, then a patch that was recently removed could show up as applied. This is an example of a stale flash image.
4. Apply any missing PRSUs to the specified destinations as determined by the AOR flag (see above).
5. Inform SPM OAMP software about the status of the patchfail alarm and exit. If the above 2 steps completed successfully, then patchfail is cleared, and if not, then patchfail is failed for the given SPM device. An SPM301 log is output to show the status of the patchfail alarm.  
**Note:** Following any SPARTS failure (patches unable to be applied, PRSM busy etc.) SPARTS will reattempt multiple times after the failure at approximately 30 minute intervals.

The technique used in PAL for XPMs can be applied to SPMs to control re-applying or removing a PRSU following an RTS, namely setting the AOR flag to N for all SPM devices via the ASSIGN command:

**>assign aor n in prsuset def09s0p on spm**

PRSU def09s0p will now not be re-applied on any device following an RTS and removed on any DEST that it is found applied to.

Other ways to control SPARTS (these do not work for PAL) is to place a PRSU onhold or hold an SPM DEST:

**>assign onhold y in prsuset def09s0p**

The status of PRSU def09s0p will now be frozen and SPARTS will not be able to re-apply it or remove it from any device.

**>assign hold y in destset spm 3 cem 1**

The patch content of spm 3 cem 1 will now be frozen and SPARTS will not be able to apply or remove any PRSUs from the DEST.

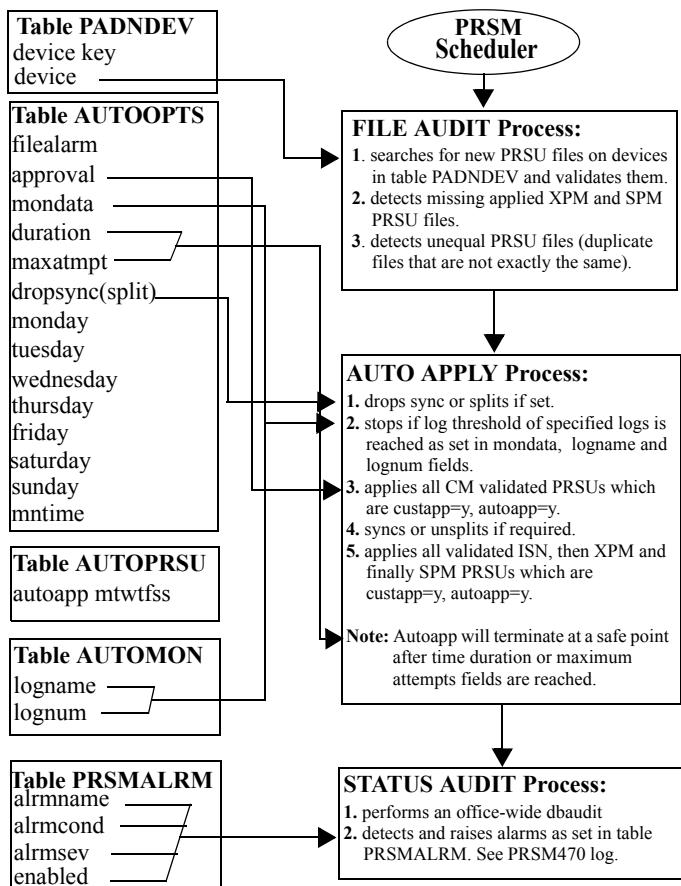

### **AUTOPROC command**

Use the AUTOPROC command to query the status of any or all of the PRSM automated processes discussed on the following page. It can also be used to START, STOP or DELAY any of the automated processes. Type "prsm;help commands autoproc" for more information.

## Summary of PRSM Auto Processes

PRSM auto processes are controlled by the PRSM scheduler. Everyday at the day of the week times set in table AUTOOPTS it executes the File Audit, Autoapp and the Status Audit. The Auto Apply process is the only optional process and can be controlled via table AUTOPRSU to set which days of the week it runs. Other fields in table AUTOOPTS (mondata, duration, maxatmpt and dropsync(split for XACore)) are used to control other attributes. The approval field is used to set the custapp default for new PRSU files. MNTIME is a field calculated and written by the system which estimates the next time autoapp will start.

## Automatic Image Dump

**Note:** Automatic image (AUTOIMAGE) allows for image dumps to be taken automatically for DMS-100F SuperNode switches.

## Autodump Commands

- >AUTODUMP <subcommands> has the following subcommands:
- >HISTORY displays the history of the last scheduled image.
  - >STATUS displays info on last dump taken and ON/OFF status.
  - >ON/OFF turns scheduled image ON or OFF.
  - >MANUAL starts an image dump on command.
  - >RETAIN change the primary load route updating.
- >STOPDUMP used to stop a scheduled image already in progress.

## AUTOIMAGE Tables

Table IMAGEDEV defines the image storage file storage devices used in the automatic image dump process. Each tuple in this table consists of 2 fields, VOLNAME and ACTIVE. This table has a maximum size of 4 corresponding to the 4 load routes.

Table IMAGESCHED is used to track and schedule the automatic image dump process. Each tuple in this table consists of four fields: DAY, DUMPHOUR, DUMPMIN, and ACTIVE. The table has a maximum size of 7 tuples corresponding to the seven days of the week.

### Notes:

1. If any tuples are not datafilled, the auto-image will not run.
2. If more than one volume is defined, then the next image occurs on the next available volume. If current volume is the last one, auto-image will rotate to the top of the table and use the volume defined in the first tuple.
3. If a tuple is datafilled in either table but the ACTIVE field is set to "N", the auto-image will not run on that day nor use the oldest volume, depending on the table.
4. Some offices may need to increase the size of their disk volumes to accommodate two images.

## Calculating Node and Terminal Numbers

**Note:** To verify results enter: >DISPCALL;DISPTID <node #> <TID>

### DNs, LENs, Trunks:

Use CONVERT command in PMIST

>CONVERT DN <directory #>

>CONVERT LEN <LEN #>

>CONVERT TRK <CLLI> <Ckt. #>

### MPC:

>XPMIST

>NodeNO MPC\_NODE MPC<MPC # from Table MPC>

Returns node #. To XPMIST, include TID 0 (mtc. chnl.) & TID 1 (term.#).

### IOC 1X67 Card:

>MAPCI;MTC;IOD;IOC <IOC #>;Card <card #>;QUERYTTY <ckt #>

Returns node #. To XPMIST, include TID 0 (mtc. chl.) & TID 1 (term. #).

### Attendant Console:

>AC <console CLLI> TIDS

Shows the DMODEM attached.

### DTC:

>PM;Post DTC <DTC #>;QueryPM

Provides node number.

[(<span> \* 32) + <ckt #> + 1]

Provides terminal number.

### DCM:

>PM;Post DCM <DCM #>;QueryPM

Provides node number.

(See chart below for terminal number)

		DCM SPANS				
		0	1	2	3	4
C I R C U I T S	1	1	31	61	91	2
	2	32	62	92	3	33

### TOPS IV/MP DMODEM:

>MAPCI;MTC;TRKS;TTP;Post G TOPSPOS DATA <position #>

Provides associated DMODEM.

>Post G DMODEM <DMODEM #>

This shows MTM # (add one to the ckt number to get terminal number).

>PM;Post MTM <MTM #>;QueryPM

Provides node number.

### TOPS IV/MP Positions:

>MAPCI;MTC;TRKS;TTP;POST G TOPSPOS <Pos. #>

### TOPS MPX Position:

>Table TOPSPOS;POS <pos #>

Provides TPC number ("63").

TABLE: TOPSPOS

POS VCCKT VCPD CARD DATAPATH POSAREA NO GRP CODE

-----  
100 TMS 0 0 1 NPDGRP DS1SIG TMS MP ASCII 63 0 OPR 2 ALL ALL

>MAPCI;MTC;PM;Post TPC <TPC #>; QueryPM Provides node number and MP number; [<MP #> + 1] — gives terminal number.

### ISDN Sets:

>QDN <directory number>

Provides LTID.

>QLT <LTID>

Provides node and terminal number.

(If QLT only returns a LEN, QLEN will give node and terminal number).

## Ringling Quick References

(NTP 297-1001-131, Ringling System)

(NTP 297-1001-592, Peripheral Maintenance Guide)

### Informational Notes for Ringling:

- Calls in ringling state are dropped when a warm SWACT occurs.
- Ringling is provided to all lines in the LCE frame by RG0 and RG1.
- Normally, RG0 supplies ringling to the even-numbered LCM.
- Normally, RG1 supplies ringling to the odd-numbered LCM.
- The LCM is capable of switching RGs when an RG or LD fault occurs.
- A single RG can supply ringling to all LDs in the LCE frame.
- The ANI/COIN circuit in RG0 serves unit 0 of both LCMs.
- The ANI/COIN circuit in RG1 serves unit 1 of both LCMs.
- An ANI/COIN failure in either circuit causes both LCMs to enter takeover mode. In takeover, the remaining ANI/COIN circuit is capable of serving both LCMs in the LCE frame.
- Reloading LCMs or performing a SWACT on the C-Side PM does not correct problems associated with ringling.
- Troubleshooting guidelines for ringling problems can be found in Chapter 31 of NTP 297-1001-592, *Peripheral Maintenance Guide*.
- Guidelines for changing ringling data in table LCMINV can be found in Chapter 24 of NTP 297-1001-592, *Peripheral Maintenance Guide*.
- See “LM/RLM Ringling” in this QRG for a table on “Line Class Codes by Card Type and Ring Code” and reference to table LMRNG.

### RA/RB Fuse Block Reference for Ringling Check

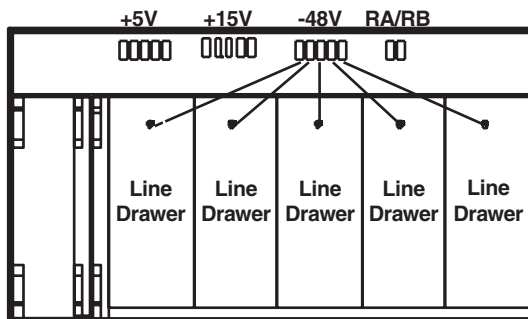

### Cross Reference of LCMs and Drawers to RA/RB Fuses

**Note:** See LCE Frame in this QRG for location of LSGs and drawers.

Shelf location	04	21	38	55
LCM number	0	0	1	1
LCM Unit	0	1	0	1
Odd LSGs	RB	RA	RB	RA
Even LSGs	RA	RB	RA	RB

### Line Drawers and Associated Fuses

### BICRELAY Testing Note:

The BICRELAY Testing feature should be set up for testing only if party lines are assigned on NT6X17 line cards, or if any NT6X19 message waiting cards are used. Reference the LCMINV table and the BICTST field where the test is set to “Y” or “N”. See the OFCENG table parameter ALLOW\_RINGING\_ON\_TIP\_SIDE. Parameter BICRELAY\_XLCM\_TEST\_SCHEDULE is preset.

## Trunk Group Types Quick References

(NTP 297-YYYY-350, Translation Guides)

AI	Automatic Intercept System (AIS)
AN	Automatic Number Announcement
ANI	Automatic Number Identification
AOSS	Auxiliary Operator Services System (AOSS) Trunk Group
AOSSARU	AOSS External Audio Response Unit (ARU)
ATC	Access Tandem to Carrier (Originating from SC,IT,TOPS and Terminating to SC and IT trunk group types
A5	Two-way or Outgoing from Local to North Electric AMR5
CA	Siemens ADDS Come Again Signalling for 1+, 0+, 0- calls
CELL	Cellular (Bellcore type 2A interconnect to CMC switch)
DA	Directory Assistance Charging
DS0	Digital Signal Level 0 (Transmission Link from SSP to STP)
ES	Emergency Service Bureau
E911	Enhanced 911 Emergency Service
GERIC	Incoming 1TR7 ISUP for Germany Network field trial
GEROG	Outgoing 1TR7 ISUP for Germany Network field trial
GER2W	Two-way 1TR7 ISUP for Germany Network field trial
GW	International Gateway Trunk Groups
IBNT2, TI	Integrated Business Network (IBN) 2-way, Incoming, and
TO	Outgoing Trunk Groups
IET	Inter-Exchange Tandem Trunk Group that us SRMF signalling
INT101	International 101 test line for a DMS Gateway Office
IR	Intercept, Information, or Repair with no outpulsing
IS	Tandem Switching — no digits incoming — route upon seizure
IT	Intertoll Trunk Group
ITL2	International 102 test trunk
ITOPS	International TOPS
LOOPA1	Loop-Around Test Line (NT2X75AA) and A-law
	Loop-Around (NT2X75BA) Port 1
LOOPA2	Loop-Around Test Line (NT2X75AA) and A-law
	Loop-Around (NT2X75BA) Port 2
LPBK	Loopback Trunk
LP4W	Four-Wire Digital Loopback for ISUP Trunks in a DMS-300
MAINT	MAINTENANCE AND TEST TRUNK GROUPS:
DCLTONE	Dialable Cable Locator Tone (NT2X90 type pack)
	DTU Digital Test Unit (NT4X23AA)
ESADGTR	Emergency Stand-Alone Digital Receiver (NT2X48AB)
	HSET Position Headset (NT2X72, NT2X88AA or NT5X30AA)
JACK	Position Jack (Local = NT1X54AA, Toll = NT2X72 type)
	LTU Line Test Unit (NT2X10 and NT2X11 type circuit packs)
MONTALK	Monitor and Talk for LTU (NT2X90 type circuit pack)
	MTU Metallic Test Unit (Domestic = NT2X11; Intl = NT4X79)
	TTT Trunk Test Transmission (NT1X90 and NT2X96 type packs)
SPARExxx	Spare Trunk Groups
OCKT	Open Circuit Test Trunk (NT2X71AA)
SCKT	Short Circuit Test Trunk (NT2X71AA)
MTR	International with Metering on Trunk Groups
NFA	Network Facility Access
NU	Nailed-Up Connection
OC	Outgoing and Two-way from Local Office to Toll CAMA
OI	Incoming Operator Verification
OOC	Overseas Operator Center
OP	Outgoing or 2-way from Local & Toll Offices to TOPS/TSPS
OPR	International with Operator
OS	Toll Completing Joint Hold
PET	PCS 1900 Equal Access Trunk
PRA	Primary Rate Access
PRIVLN	Gateway Private Line
PX	DID and DOD or both with a Digital PBX
P2	DID and DOD or both with a PBX
RC	Recording Completing to a 3CL switchboard
RONI	Remote Operator Number Identified (ONI) Trunk Group
ROTL	Remote Office Test Line
SC	Incoming and Two-way CAMA
SOCKT	Transmission Tests
SPC	Semi-Permanent for International Offices
TD	Test Desk
TDDO	Two-Stage Direct Dial Overseas
TI,TO,T2	Incoming, Outgoing, and 2-way End Office
TL	CCIS Transmission Link
TOPS	TOPS Trunk Group
TOPSARU	TOPS External Audio Response Unit
TOPSVL	TOPS Voice Link
TPS101	International 101 Test Line
TTL2	102 Test used for Carrier Milliwatt supply and Balance Test
T101	Incoming and Outgoing Trunk Group for 101 Test Line
T105	105 Test Line
UT	Utility Telemetry Trunk Group
VR	Verification Trunk
X75	X.75 Trunk Group for connection to a DMS Packet Handler
ZI	Tandem 0+ or 0- to TOPS

## ISDN Quick References

(NTP 297-2401-501, ISDN BRI Maintenance Guide)

**Note:** See ISDN BRI Troubleshooting for PM180 and PM189 logs and ISDN Q931 Procedures for Traces on BRI and PRI in this QRG.

**Note:** See “TRAVER Commands” within this QRG for ISDN TRAVER information and examples.

### ISDN Query Commands

- >**QLT** The QLT command queries a logical terminal.
- >**QDCH** The QDCH command displays D-channel handler (DCH) connections or ISDN service group (ISG) information. The following connection types are supported:
- LTID - specifies the number of LTIDs on a DCH.
  - BRA - specifies connection info. for BRA channels.
  - Bd - specifies Bd channels connection information.
- >**QBB** The QBB command displays all relevant information associated with ISDN B-channel connections.
- >**QLOOP** An LTPISDN level command that displays all LTIDs, DNs, and TELs associated with a posted ISDN line. For B-channel packet terminals, the specific B channel is displayed rather than the TEL.
- >**QCOUNTS** The QCOUNTS command is used to display and reset Layer 2 and Layer 3 protocol and protocol abnormality counts for a particular X.25 LTID or X.75 interface. The command provides an instantaneous snap-shot of protocol performance associated with a logical terminal, X.75 trunk, or specific XSG.
- >**QIT** The QIT command displays packet provisioning information for terminals on the DPN packet handler (LTIDs in PHINFO). QIT is the primary command for packet-switched service with the DPN PH. Use the QLT command for circuit-switched service.
- >**QPHF** The QPHF command displays information about XSGs, channels, DNs, PVCs, and X.75 links.
- >**QSCONN** The QSCONN command displays information on special connections for ISDN XPMs. With the DMS packet handler, QSCONN can also be used to identify special connections associated with a specific XSG, and to display all special connections through the network.
- >**QX75** The QX75 command displays information for the specified XSG that is associated with the X75 special connections to the DMS packet handler.

### ISDN OM Groups

- BCAPCG provides registers to count the number of unsuccessful call attempts for IBN and ISDN lines due to bearer capability incompatibility for a particular customer group.
- BCAPOF same as OM group above, except counts for the whole office. It also measures synonym directory number activity.
- ISGBRA provides registers to count the number of frames transmitted & received, number of frames discarded, and number of frames with CRC errors on a BRI DCH channel basis.
- ISGBD provides registers to count the number of frames transmitted & received, number of frames discarded, and number of frames with CRC errors for Bd channels on a per-channel basis. Useful with Packet Service.
- ISGCPU provides registers to measure the ISG's CPU occupancy on a per-DCH basis.
- ISGOVLD provides registers to measure the degree to which an ISG is overloaded on a per-DCH basis.
- CPICG provides registers to count call progress activity events.
- LMD can be very useful in finding out whether an ISDN PM is under provisioned with DS30-A links to the LCME. Recommend using ORIGBLK and TERMBLK OM registers.
- XPMLMK records one-way and two-way link blockage and usage for all XPMs with switched lines. Use PSLBLK and CSLBLK.

### ISDN Office Engineering (OFCENG) Table Parameters

#### Used by Bearer Capability Routing:

NUM\_RC\_EXT\_BLKs  
DEFAULT\_BEARER\_CAPABILITY Recommend set to SPEECH.  
BC\_CHECKING\_SCOPE

#### Used by Flexible Calling:

MAX\_NO\_OF\_3\_PORTS\_IN\_CHAIN  
MAX\_NO\_MEDIUM\_FTR\_DATA\_BLKs

#### Other OFCENG Table ISDN related Parameters:

ISDN\_DPN\_PH\_GENERIC  
ISDN\_NET\_1A\_INTERWORKING

**ISDN parameters continue on the next page.**

## ISDN parameters continue.

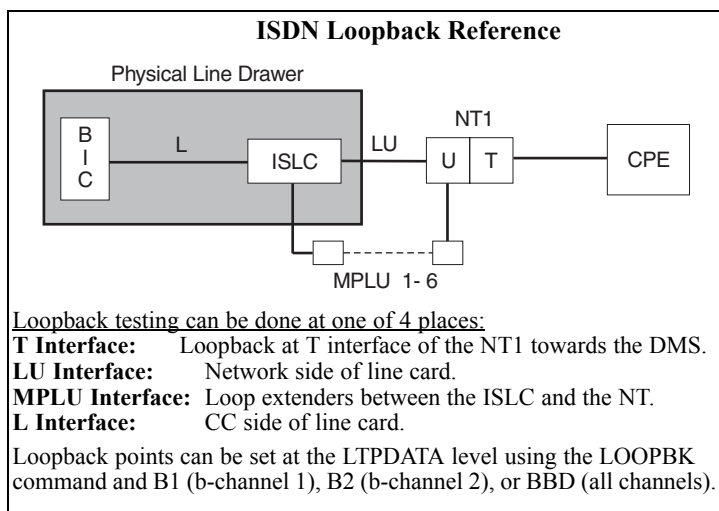

ISGBDOM\_BLKSIZE  
LAYER2\_PEGS\_THRESHOLD\_LEVEL  
LCDI\_SYNC\_BURST  
LCDI\_SYNC\_DELAY  
PHINFO\_AUDIT\_TIME  
T108ISDN\_TIMEOUT\_IN\_MINUTES

### OFCOPT Table ISDN related Parameters:

ISDN\_INFO\_EXT\_REC  
MAX\_BRA\_LINES  
MAX\_PRI\_LINKS

### OFCVAR Table ISDN related Parameters:

QISDN\_LOSS\_OF\_SYNC\_WORD\_ALARM  
QISDN\_LOSS\_OF\_SIG\_DGASP\_ALARM  
QISDN\_NT1\_TEST\_MODE\_ALARM  
QISDN\_T\_SYNC\_LOST\_ALARM  
QISDN\_PERFORMANCE\_MON\_ALARM  
ISDN\_LOSS\_OF\_SIG\_N0\_DGASP\_ALARM

### Configuring a BRAFS ISDN set with SPID

The Service Profile Identifier (SPID) is a number which associates a terminal to its subscribed services. A SPID must be datafilled in the physical terminal for Layer 3 ISDN connectivity. For National ISDN-1 (NI-1), a 2-digit user-definable number terminal ID (TID) must be included in the SPID configuration. The TID is not datafilled in the DMS-100.

**Protocol Version Control 1 SPID** = NPA + 7-digit DN + spid-suffix (if datafilled in the switch)

**Protocol Version Control 2 SPID** = NPA + 7-digit DN + spid-suffix (if datafilled in the switch) + TID

**spid-suffix** = one to two digit identifier for EKTS-based services, e.g. MADN; MUST match spid-suffix datafilled in the switch.

**Note:** A spid-suffix is not required for non-EKTS ISDN sets.

### Reserving a Spare DCH

Nortel recommends reserving one D-channel handler (DCH) per XPM as a hot spare. For example if you have two DCHs in table DCHINV, only datafill one ISG in table ISGDEF. The second DCH becomes a hot spare.

#### Table DCHINV:

DCHNO	PMTYPE	PMNO	DCHPEC	LOAD	PORT
2	LTC	3	BX02BA	EDH05BC	17
3	LTC	3	BX02BA	EDH05BC	19

#### Table ISGDEF:

ISGNO PMTYPE PMNO SERVICE CHNLTAB  
1 LTC 3 (BRA) (PD) \$ (0 RESERVED) (1 BRA) (2 BRA) (3 BRA) (4 BRA) (5 BRA) (6 BRA) (7 BRA) (8 BRA) (9 BRA) (10 BRA) (11 BRA) (12 BRA) (13 BRA) (14 BRA) (15 BRA) (16 BRA) (17 BRA) (18 BRA) (19 BRA) (20 BRA) (21 BRA) (22 BRA) (23 BRA) (24 BRA) (25 BRA) (26 BRA) (27 BRA) (28 BD) (29 BD) (30 BD) (31 BD) \$

**Note:** Bd (D-channel packet service) channels start at DCH port 31 and are datafilled backwards: 31, 30, 29, etc. BRA channels are datafilled from DCH port 1 forward.

**ISDN continues on the next page.**

**ISDN continues.**

### **PRI Trunk AMI vs. B8ZS Capability Datafill**

In this example, trunk FRS (DTCI 0, span 16) is datafilled for SF (Super-Frame) and ZCS (AMI) capability. This trunk allows 56Kbps transmission speed. Trunk PRAWBA (DTCI 0, span 0) is datafilled for ESF (Extended SuperFrame) B8ZS signalling and uses the card NT6X50AB. This datafill allows 64K clear- channel signalling capability for trunk PRAWBA.

#### **Table TRKMEM:**

CLLI EXTRKNM SGRP MEMVAR

**FRS 1 0 DTCI 0 16 1**

**PRAWBA 1 0 DTCI 0 0 1**

#### **Table LTCPSINV:**

**DTCI FRS 255 255 DS1 NT6X50AA MU\_LAW SF ZCS BPV NILDL N 250 1000 50 50  
150 1000 3 6 864 100 17 511 4 255**

**DTCI ESF 255 255 DS1 NT6X50AB MU\_LAW ESF B8ZS BPV NILDL N 250 1000 50 50  
150 1000 3 6 864 100 17 511 4 255**

### **Assignment of P-Side Links to ISDN Peripherals**

For DS1/DCH interface card port assignments, a maximum of 10 cards can be placed in the LGC/LTC. The port assignment begins with PORT 0 and increases sequentially.

The DS30A ports are assigned starting at the highest port number not used by the DCH and decreases sequentially.

The DCH cards (NORTEL recommends leaving one DCH as a spare pack) are datafilled starting at PORT 19 and decrease with the odd-numbered ports.

#### **Table LTCPSINV:**

LTCNAME PSLNKTAB

**LTC 3 N (0 DS1 64K N) (1 DS1 DEFAULT N) (2 NILTYPE) (3NILTYPE)  
(4 NILTYPE) (5 NILTYPE) (6 DS30A) (7 DS30A) (8 DS30A) (9 DS30A)  
(10 DS1PRA 64K N 0 NIL) (11 DS1PRA 64K N 0 NIL) (12 DS30A) (13 DS30A)  
(14 DS30A) (15 DS30A) (16 DS30A) (17 DCH) (18 DS30A) (19 DCH) \$**

### **PRI Datafill of Interface IDentifier (IID)**

To bring a new PRI trunk into service, especially if this trunk interfaces an SL-1 PBX, follow the following guidelines in the corresponding XPM entry in table LTCPSINV:

- The span of the PRIMARY DCH must have an IID of "0".
- The span of the BACKUP DCH must have an IID of "1".
- For any additional spans in the trunk group:
  - For an MSL-100, if a backup DCH is not datafilled, the IID of "1" should not be used.
  - The IID's of the additional spans should ascend sequentially, though not necessarily consecutively.

#### **TABLE LTCPSINV:**

LTCNAME PSLNKTAB

**DTCI 0 N (0 DS1PRA ESF N 0 NIL) (1 DS1PRA ESF N 1 NIL)  
(2 DS1PRA ESF N 2 NIL) (3 DS1PRA ESF N 3 NIL)  
(4 DS1PRA ESF N 0 NIL) (5 DS1PRA ESF N 0 NIL)

### AIN RESPONSE TRAVER Examples

Analyze Route Response (AR) with Called Party Number (CDN):

>traver l 6783422 n cdn na 6196783420 ainres r01 ar b

**Note:** na = Nature of Number

AR with CDN and Carrier information/Transit Network Selection (TNS):

>traver l 6783422 n cdn na 2016783422 tns na cic 222 ainres r01 ar b

>traver tr tasdc7t2 n cdn na 2016783422 tns na unk 222 ainres r01 ar b

**Note:** We use 'unk' for most trunk originators and 'cic' for line originators, IBN trunk originators, and PRI trunk originators.

Continue Response (CONT):

>traver l 6783422 96783420 ainres r01 cont b

AR with CDN, TNS, and operator information (OSA):

>traver l 6783422 n cdn na 2016783422 tns na cic 222 osa puba ainres r01 ar b

**Note:** puba = Operator System Access.

Forward Call (FC) with CDN:

>traver l 6783419 n cdn na 6196783421 ainres r01 rc b

**Note:** Originator for TRAVER is the agent with TERMATTEMPT trigger.

### AINTRACE Command

To run AINTRACE type:

>AINTRACE

>SELECT <parameter>

This command selects a terminal for tracing.

Parameters are:

- AC - specify the Attendant Console CLLI for the terminal
- TID - specify a terminal ID for the terminal
- LTID - specify the Logical Terminal ID for the terminal
- DN - specify the directory number for the terminal
- LEN - specify the line equipment number for the terminal
- TRK - specify the trunk CLLI for the terminal

>START

"Make test call"

>STOP

>BACKALL (displays data)

### Message Types

E1 - Unidirectional (Error)

E2 - Query with Permission

E4 - Response

E5 - Conversation with Permission

E6 - Abort

# Local Number Portability (LNP) Quick References

(NTP 297-8981-021, LRN - LNP Service Implementation Guide)

**LNP Tables:** TOFCNAME, HOMELRN, FNPA7DIG, TRIGDIG, TRIGGRP, OFCVAR, LNPOPTS, LNPCODE  
LNPRTE (see patches LNP01, LNP02, and LNP03)  
VII06RTE (see patches VII05 and VII06)  
ARSSTS (see patches LNP30, LNP31, and LNP32)

**LOGS:** LNP (also see AIN LOGS)

**OM Groups:** LNP (also see AIN OM Groups)

## QLRN Command:

>qlrn 8197251111

Query sent: 1999/12/31 11:59:59.571 FRI.

Valid QLRN response received.

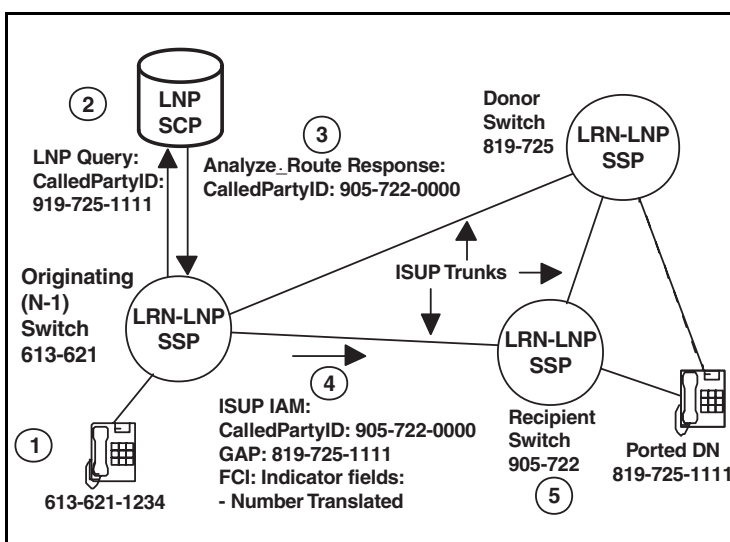

Routing number: 9057220000.

CALLING DN: 6136210000. Office:TASCAPTIVE\_P.

Elapsed Time (mm:ss:mS): 0:0:5.

## Call to Ported DN

**Note:** TRAVER examples below support this diagram.

## LNP TRAVER Examples

Processing Analyze\_Route from LNP SCP (see #3 from diagram above):

-CalledPartyID from response = LRN = 905-722-0000

-dialed DN = 819-725-1111

>traver l 6211234 n cdn na 9057220000 ainres r01 lnpar 8197251111 b

Processing Analyze\_Route from LNP SCP:

-CalledPartyID from response = dialed DN = 4164671001

>traver l 6255000 n cdn na 4164671001 ainres r01 lnpar n b

Incoming LNP call to a DN which has ported to this switch (see #5 from diagram above):

-incoming ISUP

-LNP query occurred on a previous switch

-LRN=905-722-0000

-GAP=819-725-1111

>traver tr isupitic 9057220000 tcni 8197251111 b

Incoming LNP call to a non-portable DN on this switch:

-incoming ISUP

-LNP query occurred on a previous switch

-dialed DN = 6136631001

>traver tr isupitic 6136631001 tcni n b

## ACD-MIS Quick References

### Documentation:

NTP 297-2041-500, *ACD Maintenance Guide*

NTP 297-2041-011, *ACD Planning and Engineering Guide*

NTP 297-2041-350, *ACD Translations Guide*

NT NIS-Q209-2, *ACD MIS Interface Specifications*, Version 9.1

### Base ACD Tables:

ACDGRP, ACDRTE, ACDSGRP, ACDMISPL, ACDMISSP,  
ACDLOGIN, DNROUTE, DNATTRS, MPC, MPCLINK.

**Note:** See NTP 297-YYYY-350, *Translations Guide—Volume 3* for a detailed list of ACD tables.

**LOGS:** ACD, IOD, MPC, NOP, RO, AUD545, DIFL151,  
LINE205, LMAN, RMAN, MIS, SLNK, MSRT, TCAP

**OM Groups:** ACDMISPL, ACDGRP, EXT, FCS, FTQR,  
NACDGRP1, NACDGRP2, MPCLINK2,  
MPCLINK3, ROAPPL, ROMISC,  
VFGIWUSE

**Note:** See NTP 297-2041-500, *ACD Maintenance Guide* for a detailed list of ACD related LOGS and ACD OM groups and their registers.

### ACDRTD Real Time Display Command

From the CI level, the ACDRTD command will dump an ACD Real Time report to a specified device. For example, to generate a report every 20 seconds for all ACD groups:

>ACDRTD STARTDEV <device name> INTERVAL 20 ALL

Sample output:

TIME OF DAY	ACDGRP	PRIMEDN	CQCCW	MAN	BSY	IDL	NR	MSB
98/11/02 17:21:12	ACDGRP1	4437104	8 34	36	32	0	4	6
98/11/02 17:21:13	ACDGRP2	4433334	0 0	0	0	0	0	4

This report gives the following information for ACDGRP1:

- eight calls in queue
- next call to be answered has been waiting 34 seconds
- 36 agents currently logged in
- 32 agents active on ACD calls
- no idle agents
- four agents logged in but unavailable for ACD calls
- six agents currently in Make Set Busy mode

To stop the report, type:

>ACDRTD STOPDEV

### ACD Commands

A CI level command that allows the user to display general information and current status of all or specific ACD pools.

#### ACDQSTAT Command:

>ACDQSTAT <ACD group>

PRIME	DN	CALLS	AGNTS	WAIT
8566666	0	0	0	

#### ACDDEBUG Command:

Non-resident tool used to format and display real-time status of ACD agents, groups, and queues. See ACDDEBUG under Tier II Support Tools.

#### ACDSHOW Commands:

- >HELP displays available commands.
- >QUIT quits from ACDSHOW environment.
- >ACDDNS displays list of directory numbers.
- >ADMINGROUP displays admin groups and assoc. senior supervisors.
- >AGTPOS displays list of agent positions.
- >AUDIOGROUP displays name of audio group used to give recorded message to callers.
- >CLRROUTE displays the clearing route to which queued ACD calls are optionally routed while the specified ACD group is in the night service mode. The route can be displayed for all or specified ACD groups.
- >COUNTS displays current statistics of ACD group(s).
- >GROUPINFO displays ACD group information.

ACD-MIS continue on the next page.

## ACD-MIS continues.

> <b>GROUPNAME</b>	displays grp name, DN type, & priority for given DN.
> <b>LOGINID</b>	displays information relating to a particular login id.
> <b>MODE</b>	sets default display mode (brief/full).
> <b>NSROUTE</b>	displays nightservice route(s).
> <b>OVFLROUTE</b>	displays overflow route(s).
> <b>PASSWORD</b>	displays password of login identifications.
> <b>STATUS</b>	displays current status of ACD group(s).
> <b>SUPERVISOR</b>	displays a list of ACD supervisors.
> <b>TABENTRY</b>	displays routing information.
> <b>THRESHOLD</b>	displays threshold limits.
> <b>THROUTE</b>	displays threshold route(s).
> <b>VALIDAUDIO</b>	displays valid audio groups.
> <b>VALIDROUTES</b>	displays valid routes for groups.
> <b>NSAUDGRP</b>	disps's name of audio grp used for night service annnc.
> <b>FIAUDGRP</b>	display name of audio grp used for forced INC annnc.
> <b>FOAUDGRP</b>	display name of audio grp used for forced OG annnc.

## ACD OM Groups

ACDGRP	Registers ACD traffic.
EXT	Registers Extension Block use.
FTRQ	Registers Feature Queue Block use.
NACDGRP1	Registers Immediate & Time Delayed Overflow Traffic.
NACDGRP2	Registers TCAP message traffic.

## LOADMGMT III Commands

**Note:** The ACDSHOW command must be entered before entering LOADMGMT. The following list contains all the available load management commands. Not all of the commands are available with only the ACD - Load Management III feature package. Other feature packages may be required.

> <b>ADD ACDDISP</b>	associates a new name to an ACDDN datafilled in table DNATTRS.
> <b>CHANGE ACDDISP</b>	alters the display message of the ACD called name/called number that appears on the agent's telephone set.
> <b>CHANGE ACDDNPRI</b>	alters the priority of the ACDDN assigned to an ACD group.
> <b>CHANGE ACTIVATE</b>	enables a supervisor/administrator to activate anddeactivate a single login ID or a range of loginIDs. This command canbe entered from a MAP position or from an ACDMIS. This command isapplicable only to login IDs stored in table ACDENLOG.
> <b>CHANGE AUDIO</b>	alters the recorded announcement presented when callers join the incoming call queue for an ACD group by referencing one of the audio groups in table AUDIO.
> <b>CHANGE CIFROUTE</b>	alters the route calls take when the <b>Interflow</b> key is activated.
> <b>CHANGE CLRROUTE</b>	alters the clearing route to which queued ACD calls are optionally routed while specified ACD group is in the night service mode.
> <b>CHANGE CPKRTMR</b>	alters the call park recall timer value for an ACD group. The recall timer is used to recall a parked call that is not answered within a specified time.
> <b>CHANGE CTQSIZE</b>	alters the number of calls that can be queued in the call transfer queue.
> <b>CHANGE CTRTMR</b>	alters the call transfer recall timer for an ACD group. The call transfer recall timer is used to recall a transferred call that is not answered within a specified time.
> <b>CHANGE DEFLOB</b>	alters default line of business code for ACD grp.
> <b>CHANGE FIAUDGRP</b>	changes the audio group to be used for all incoming calls that are presented to an agent or queued in the incoming call queue.
> <b>CHANGE FOAUDGRP</b>	changes audio group to be used for all calls that are rerouted due to overflow condition.
> <b>CHANGE MAXCQSIZE</b>	alters the maximum number of calls that can be queued in the incoming call queue for an ACD group.
> <b>CHANGE MAXVQSIZE</b>	alters the maximum size of the overflow queue for an ACD group.

**LOADMGMT commands continue on the next page.**

## LOADMGMT commands continue.

>CHANGE MAXWAIT	alters the maximum time a call can wait in an incoming call queue before being presented to an agent position.
>CHANGE MSQSTYPE	changes the type of multistage queue status(MSQS) display. The MSQS display types are WAIT (for the wait time of the call at the head of the incoming call queue) and CALLQ (for the size of the incoming call queue).
>CHANGE NSAUDGRP	alters the audio group of the announcement to which incoming ACD calls are given prior to being rerouted to the night service route.
>CHANGE NSROUTE	alters the route to which calls for an inactive ACD group are directed. Calls can be routed to the following destinations: <ul style="list-style-type: none"><li>• another ACD group</li><li>• a Uniform Call Distribution (UCD) group</li><li>• a station within the switch</li><li>• an outgoing trunk group</li><li>• a recorded announcement</li></ul>
>CHANGE OFLTYPE	changes the use of time delay overflow to priority 0 calls only or to all priority calls. This command also determines when the time delay overflow timer starts.
>CHANGE ORGANN	changes the announcement heard by callers following overflow treatment to or from the original ACD group.
>CHANGE OVFLROUTE	alters the list of routes (ACD groups) to which overflow calls for an ACD group can be routed. Routes can be adjusted as follows: <ul style="list-style-type: none"><li>• replace one group with a new group</li><li>• swap two groups within the list</li><li>• add a group</li><li>• delete a group</li></ul>
>CHANGE PAQSIZE	alters the personal agent queue size for an ACD agent.
>CHANGE PRIOPRO	alters the priority promotion time interval.
>CHANGE QTHRESHOLD	alters the MSQS thresholds that allow supervisors to monitor the statuses of incoming call queues.
>CHANGE RANTH	alters length of time a caller hears ringing before being presented with a recorded announcement.
>CHANGE RI	alters the resource index (RI) value of the destination ACD group if it is not a DMS switch.
>CHANGE SERVICE	alters the type of calls to be serviced first: incoming overflow, priority 0, or oldest.
>CHANGE THROUTE	alters the route to which calls for an ACD group are eventually directed if they cannot be queued.
>CHANGE TMDELOFL	alters time delay overflow time-out value.
>CHANGE TMDTHRTE	alters the time delay threshold route.
>CHANGE TMDTHTIME	alters the wait time for a call before it is sent to the time delay threshold route.
>CHANGE WRPTIME	alters the wrap-up time for an individual agent or an ACD group.
>DELETE ACDDISP	deletes the ACD group name associated with a DN in table DNATTRS.
>HELP	displays general information on the syntax of load management commands.
>QUIT	exits load management environment and returns the system to the ACDSHOW environment.
>REASSIGN (ACDDN)	reassigns an supplementary ACDDN to a new ACD group.
>REASSIGN (AGENT)	reassigns up to five agent positions to a specified subgroup or supervisor in the same ACD group or in another ACD group.
>SET PROMPT	determines whether the system prompts are displayed after each command entry.

## DMS-250 Quick References

(NTP 297-2621-851, UCS DMS-250 Customer Data Schema Ref. Manual)  
(NTP 297-2621-860, UCS DMS-250 CSP Translations Reference Manual)  
(NTP 297-2621-814, UCS DMS-250 Operational Measurements Ref. Man.)  
(NTP 297-2621-819, UCS DMS-250 Commands Reference Manual)

### Trunk Group Types

DAL - Direct Access Line (PBX)  
EANT - Equal Access Network Trunk (Feature Group D)  
EDAL - Electronic Tandem network Dedicated Access Line  
IMT - Inter-Machine Trks (Connect DMS-500 to other DMS 250/500)  
ONAL - Off-Network Access Line (Feature Group A)  
ONAT - Off-Network Access Trunk (Feature Group B and C)  
PRA250 - Primary Rate Interface (ISDN)

### DMS-250 Tables

ANISCRNU, ANISCUSP, ACSCRN2, AUTHDIN, AUTHCODU, COSS-CRN, MULTIPIN, MULTICOS, PARTOSTS, PARTRANO, PATRRAN3, PARTRANS, STSTOPAR, STSTRANO, STSTRAN3, STSRANS, TRKGRP1, TRKCOS, UNRESDAT, UNRESDAY, UNRESTIM

### QACCT Commands

The Query Account (QACCT) command manages information located in the account code screening (ACSCRN2) table. QACCT replaces the ACDQUERY command.

>QACCT HELP <topic>  
>QACCT IDX <index number>  
>QACCT DUMP <with entries or datafilled only>  
>QACCT LIST <index number>  
>QACCT COPY <from index to index>  
>QACCT DELETE <index number with entries prompt>  
>QACCT FIND <account code digits>

### AUTHTEST Command

The ACCTTEST (ACCT Code Test) command performs the following:

- \* validates the following account code types:
    - authcode (AUTHACCT)
    - authcode and a speed number (AUTHSNAC)
    - automatic number identification (ANI)
    - travel card number (TCN)
  - \* translates an authcode-associated private speed number (AUTHSPEE) to the destination number stored in the service control point (SCP)
- >ACCTTEST AUTHACCT <adin authcode auth\_acct timeout>  
>ACCTTEST AUTHSPEE <adin authcode speed\_no timeout>  
>ACCTTEST AUTHSNAC <adin authcode speed\_no authacct timeout>  
>ACCTTEST ANI <ani\_no ani\_acct timeout>  
>ACCTTEST TCN <tcn\_no tcn\_acct timeout>

### Travel Card Number Test (TCNTEST) Command

The Travel Card Number Test (TCNTEST) command verifies the integrity of the travel card number (TCN) subsystem by validating calling card numbers located at remote database location(s).

Restrictions:

- Each of the TCN subsystems must be in service.
- Remote database must be operational.
- Number of simultaneous users for the TCNTEST command is limited to the number of users specified by office parameter TESTSS\_MAX\_USERS (table OFCVAR).

Datafill must be located in the following tables:

- C7GTT
- C7GTTYE
- C7LKSET
- C7LINK
- C7LOCSSN
- C7NETWRK
- C7RTESET

DMS-250 quick references continue on next page.

# CC MIS Quick References

## CC MIS Remote Login

1. Dialup via modem (VT220 terminal emulation)
2. At the login prompt type: "maint"
3. At the password prompt type: "password" (must be obtained from the end user)
4. At this point you will be placed in the maintenance menu.
5. From this menu you are able to perform various system functions and observe logs.
6. Examples of menu functions:

### Run State Utilities

Update Switch Configuration (download ACD info. from switch)  
Partition Startup and Shutdown  
Shutdown (Start) the CC MIS System  
Power Down

### Backup and Restore Utilities

Backup  
Restore

### Diagnostics

Logs  
Reset modem port  
X.25 diagnostics  
View system monitor

### Configuration

System configuration  
Switch link configuration  
Partition configuration

## CC MIS Documentation

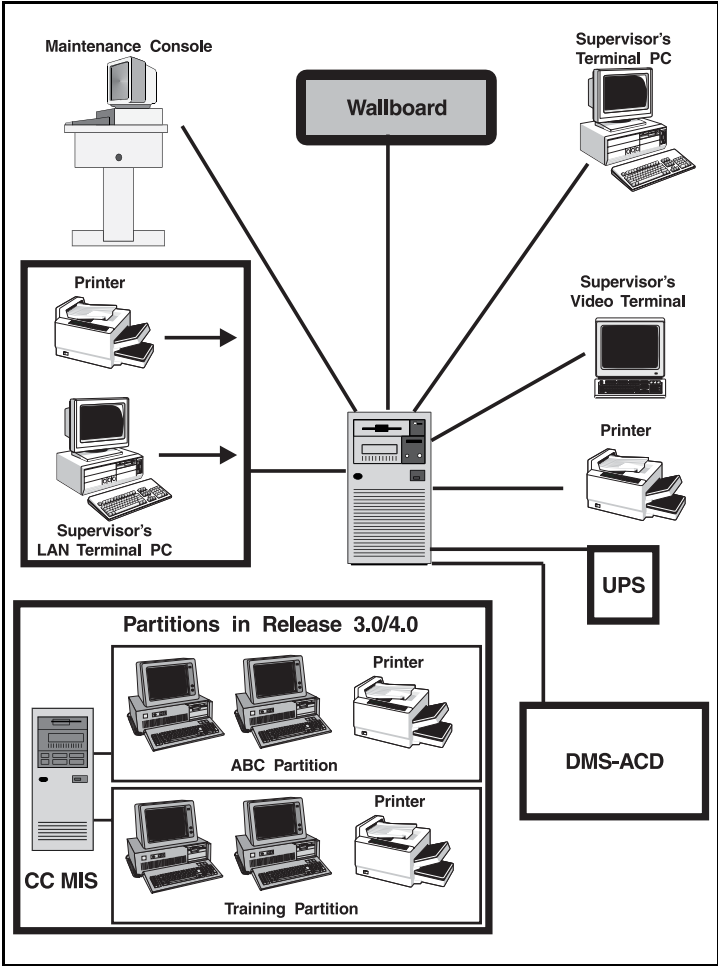

NTP 297-2671-050, *CC MIS Supervisor's Quick Reference Guide*  
NTP 297-2671-150, *CC MIS System Description*  
NTP 297-2671-175, *CC MIS Getting Started Guide*  
NTP 297-2671-211, *CC MIS Release Notes*  
NTP 297-2671-340, *CC MIS Supervisor's Guide*  
NTP 297-2671-345, *CC MIS System Administrator User's Guide*  
NTP 297-2671-545, *CC MIS Maintenance and Administration Guide*

## CC MIS System Reports

The CC MIS System Reports correspond to the system administration data built through the Parameter Administration menu. These reports are not customizable and do not require the definition of report parameters to determine the data to extract from the database. The reports are available through the System Reports menu.

Report	Description
Configuration	Contains configuration data for all positions, groups, and ACD parameters as received from the ACD switch in the download information.
Supervisor	List profile information for all supervisors.
Privilege Level	Contains privilege level information which has been entered through Parameter Administration, Privilege Level Definition.
Scope	Contains scope information which has been entered through Parm. Adm., Scope Definition.
Shift	Contains shift information which has been entered through Parm. Adm., Times Frames Def..
Period	Contains period information which has been entered through Parm. Adm., Times Frames Def..
Threshold	Lists the thresholds defined in the database.
ACD Group	List the ACD groups defined in the database that have been entered through Parameter Administration, ACD Group Definition
ACD-DN	Contains ACD-DN information which has been entered through Parm. Adm., ACD-DN Def..
Alarm Definition	Lists all alarm definitions that have been defined through the Alarm Definition mode.
Agent	Lists agents defined in the database.
Logical Group	Lists the groups sorted by the logical group.
LOB Code	Lists the LOB (line of business) codes defined in the database
Schedule Definition	Lists the schedules defined in the database.
Walkaway Code	Lists the walkaway codes defined in the database.

# CC MIS Hardware Block Diagram

Link Requirements when Switch & Host are co-located less than 100 ca. ft.

If the switch and the Motorola 8420 are not co-located, one of two options is required:

- Option 1 requires two XX Kbyte/s Channel Service Unit (CSU) connections to a T1 channel.

- Option 2 requires two Data Service Units (DSU) or two V.35 modems set to XX Kbyte/s and attached to a conditioned leased line.

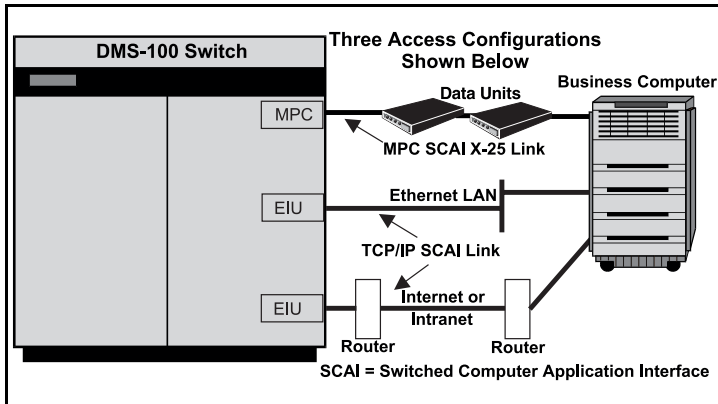

## CompuCALL Quick References

CompuCALL is the Nortel product name for Switch-to-Computer Application Interface (SCAI). CompuCALL is the interactive link between a DMS-100 and the customer's general purpose business computer making it possible for a company to coordinate database information with incoming and outgoing calls. Uses for CompuCALL include telemarketing, order entry, message desk, help desk, and emergency services. It provides such service functions as:

- coordinated voice and data
- call routing
- third party call control
- resource status
- third party agent control

### CompuCALL Hardware Diagram

**Note:** MPC = NT1X89 Multi-Protocol Controller Card located on the IOC shelf

**Note:** EIU = Ethernet Interface Unit. See EIU in this QRG.

### CompuCALL References

#### CompuCALL Tables:

MPC; MPCLINK; SCAICOMS; BGDATA; SCAIGRP; SCAISSRV; SCAIPROF; CUSTNTWK; and table ACDGRP (option SCAIREDIR) if "Call Redirection" is used.

**CompuCALL LOGS:** SCAI and MPC

#### CompuCALL OM Groups:

SCAISERV, SCAISRV2, SCAITRAN, MPCBASE, MPCLINK2, MPCLINK3, and MPCFASTA

#### CompuCALL Documentation:

NTP NIS-Q218 *CompuCALL Interface Specification*

NTP 297-YYYY-350, *Translation Guides*

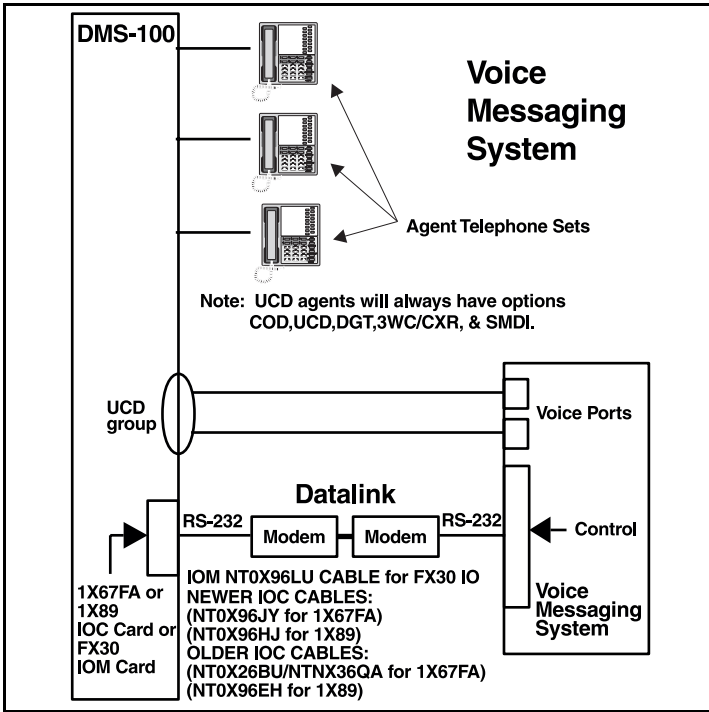

NTP 297-YYYY-550, *Maintenance Guide*

NTP 297-YYYY-544, *Trouble Locating and Clearing*

NTP 297-YYYY-545, *Recovery Procedures*

NTP 297-YYYY-814, *Operational Measurement Reference Guide*

## SMDI Quick References

### Commands to bring link down, BSY/RTS card, & restore link:

**Note:** The BSY/RTS of the SMDI link at the IOC level will automatically perform the following commands:

```
>LNKUTIL
>SMDILNK
>SMDIDISC <vmail device name>
>DEVSTOP <vmail device name> SMDIDATA
>DEVDISC <vmail device name> KILL
>MAPCI;MTC;IOD;IOC <ioc>; CARD <SMDI card>
```

**Note:** IOC and CARD information can be found in table TERMDEV.

```
>BSY 0; RTS 0
>DEVCON <vmail device name>
>DEVSTART <vmail device name> SMDIDATA
>SMDICON <vmail device name>
>LNKSTAT ALL
```

**Note:** Should show transferring after entering this command.

```
>SMDISTAT ALL
```

**Note:** Should show routing.

**The DMS accepts two kinds of incoming messages from the voice mailbox:**

1. Message to activate the MWT indicator:  
OP: MWI (SP) nnnnnnn! (D)
2. Message to deactivate the MWT indicator:  
RMV: MWI (SP) nnnnnnn! (D)

**The DMS sends two groups of outgoing messages to the voice mailbox:**

1. Call Detail Messages:  
(CR) (LF) MDqqqmmmmannnnnnnn (SP) yyyyyyy (SP) (CR) (LF) (Y)  
(CR) (LF) MDqqqmmmmannnnnnnn (SP) (SP) (CR) (LF) (Y)  
(CR) (LF) MDqqqmmmma (SP) yyyyyyy (SP)(CR)(LF)(Y)
2. MWT Change Failure Messages:  
(CR) (LF) MWInnnnnnn (SP) INV (CR) (LF) (DL) (DL) (Y)  
(CR) (LF) MWInnnnnnn (SP) BLK (CR) (LF) (DL) (DL) (Y)

where —

(SP) = space (CR) = carriage return  
 (D) = <ctrl>D (end of transmission)  
 (LF) = line feed (DL) = delete character (ASCII value FF)  
 (Y) = <ctrl>Y qq = message desk number (001 - 063)  
 mmm = msg desk terminal or line number (0001 - 2047)  
 nnnnnnn = forwarding from station number (7 or 10 digits)  
 yyyyyyy = calling station number (7 or 10 digits)  
 a = type of call: D = direct calls A = forward all calls,  
 B = forward bsy calls N = forward no ans calls

### To view incoming & outgoing messages (1X67FA)

```
>RECORD START FROM <vmail devicename>
>RECORD START FROM <vmail devicename>
```

### To view incoming & outgoing messages (1X89 MPC Card)

XPMIST the MPC link or use the MONMPC CI: level command (see the next page for MONMPC command).

**SMDI continues on the next page.**

**SMDI continues.**

### Message Waiting Utility Commands:

- >MWQ activates the message waiting query utility.
- >HELP MWQ displays the subcommands and their descriptions.
- >STATUS <dn> display messages waiting for DN with MWT/EMW option.
- >RESET <dn> clears messages for DN with MWT or EMW option.
- >DEQ <dn> <L,M,C> dequeues the requestor from the requestee.
- >QUEUE <dn> <L,M,C> <opt> queue the requestor from the requestee.

#### Process States for SMDI:

- >QUERY PROCESS SMDIHT 'queued on event'
- >QUERY PROCESS SMDIOG 'queued on flag' (1 per 1X67)
- >QUERY PROCESS SMDIINC 'queued on mailbox' (1 per 1X67)
- >QUERY PROCESS SLMPGCOGT 'queued on flag' (1 per 1X89)
- >QUERY PROCESS SMDINMPC 'queued on flag' (1 if using 1X89)
- >QUERY PROCESS SMDIAUDP 'queued on time'

#### Should show

The following command may be helpful for reviving MPC processes:

- >MAPCI;MTC;IOD;IOC x;CARD y;REVIVE ALL %%x = IOC # y = CARD #

The following command provides all the lines assigned to a UCD group from line number 1 (LINE\_NO: 1) and up:

- >SMDIDISP LINE\_TABLE GROUP 0 %%0 is first entry in table UCDGRP that has the ucd\_smdi option

### UCDQUERY Utility

- >UCDQUERY activates the UCDQUERY utility.
- >QUIT quits from the UCDQUERY environment.
- >HELP displays UCDQUERY commands.
- >SETGROUP sets the global group parameter.
- >CLEARGROUP clears the global group parameter.
- >SHOWGROUP displays the global group parameter.
- >QUERY displays the UCD data structures.
- >UCDDNS displays list of UCD DNSs.

#### Example of QUERY:

```
>QUERY RUNNINGTOTALS GROUP COVM
UCD RUNNING TOTALS FOR UCD GROUP 1 ("COVM"):
Total UCD Agents Enqueued:          48
Total UCD Agents in BUSY queue:      0
Total UCD Agents in IDLE queue:      48
Total Incoming Calls:                0
    IS EMPTY.
Total P0 Call Queue Size              0
    IS EMPTY.
Total P1 Call Queue Size              0
    IS EMPTY.
Total P2 Call Queue Size              0
    IS EMPTY.
Total P3 Call Queue Size              0
    IS EMPTY
```

#### Example of UCDDNS Command:

```
>UCDDNS GROUP COVM
UCD Directory Numbers For UCD Group COVM
Primary UCDDN:      619 675 4555
Call Priority:      0
```

### MONMPC CI: Level Commands

- >QUIT quits MONMPC level.
- >MPCSTART starts recording MPC messages onto a device.
- >MPCSTOP stops recording MPC messages onto a device.
- >MPCPRINT parses the files and displays to terminal.
- >STARTMSGs starts monitoring for a specified MPC.
- >STOPMSGs stops monitoring for a specified MPC.
- >DISPLAY displays captured MPC messages to the user.
- >ZAPDATA clears the MPC message table.
- >QUERY displays current MONMOCCI status information.
- >FORMAT determines how captured data will be displayed.
- >DEALLOC halts message capturing & deallocates MONMPC memory.
- >CAPTURE initiates capturing of MPC messages from started MPC.

#### Example of MONMPC:

```
>MPCSTART <mpc #> <device> %% fname will be RECFILE
Make test calls then: >MPCSTOP <mpc # or all>
                     >MPCPRINT <filename>
```

### SMDI References

**Tables:** TERMDEV, SLLNKDEV, UCDGRP, and DNROUTE. Also, see tables MPC & MPCLINK if using 1X89 MPC card instead of 1X67FA card.

**OMs:** SLLNK & SLLNKINC

**Eng. Parameters:** AUXCP\_CPU\_SHARE (1X89),  
CFGDA\_SEND\_PILOT\_DN\_TO\_SMDI\_ISUP (CCM04),  
FTRQ2WPERMS, FTRQ8WPERMS

# Centrex IP Client Manager Quick References

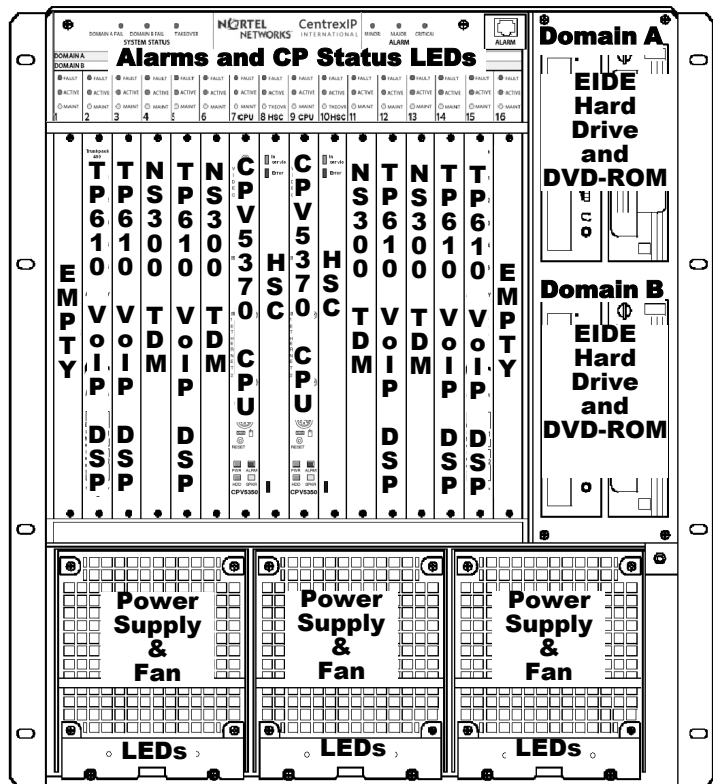

**Important Note:** Due to ongoing changes with this products hardware and provisioning recommendations, use the following only as a reference.

## PTE2000 Centrex IP Frame

## Centrex IP Gateway MCG CPX8216T Chassis

**Note:** Chassis provisioned for TDM maximum deployment.

**MCG** — Motorola Computer Group

**HSC** — Hot Swap Controller

## NS300 — Brooktrout **Net**access TDM Access Card (E1/T1)

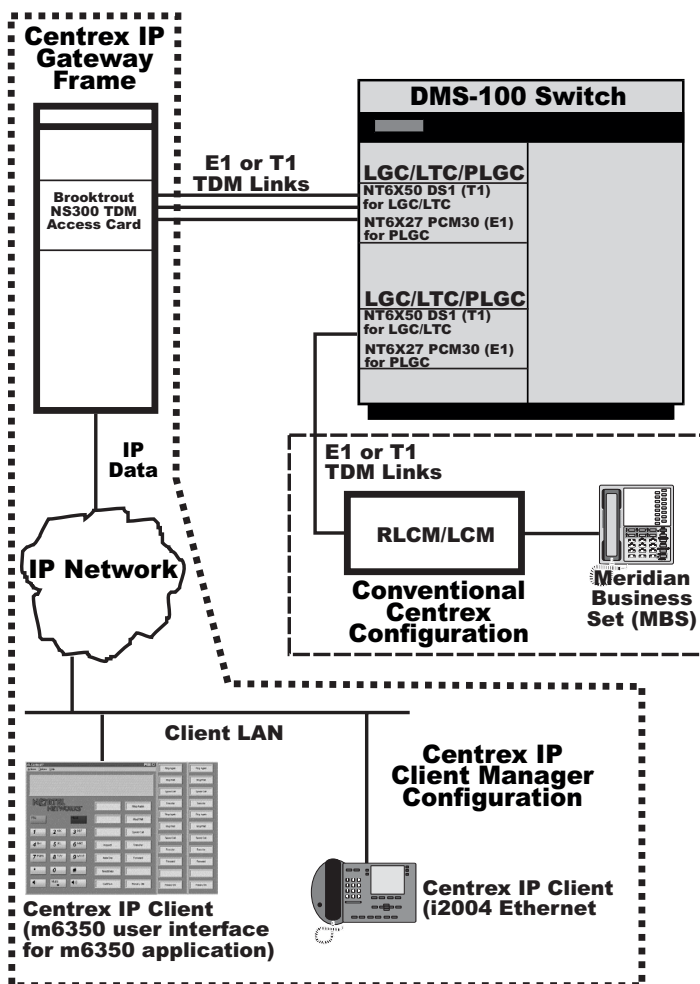

## TP610 — AudioCoded TP-610 Voice over IP (VoIP) DSP

## CPV5370 — Motorola CPV5370 CompactPCI host-slot CPU

**CPN5365** — Motorola CPN5365 CompactPCI compliant non-system CPU

**Note:** For detailed information on the Motorola MCG CPX8216T Chassis and the components within the chassis, go to [www.motorola.com](http://www.motorola.com), [www.brooktrout.com](http://www.brooktrout.com), and [www.audiocodes.com](http://www.audiocodes.com).

## Centrex IP and Conventional Centrex Configuration

### Centrex IP Client Manager Documentation References

- *DMS-MMP Base Product Description*
- NTP-297-5551-300, *Centrex IP Client Manager Administration Guide*
- NTP-297-5551-900, *m6350 Installation Guide*
- NTP-297-5551-901, *m6350 TAPI Service Provider Installation and Troubleshooting Guide*
- NTP-297-5551-920, *i2004 Installation Guide and User Manual*
- NTP-297-5551-100, *Centrex IP Client Manager Network Eng. Guide*

### Event Logs

Besides the existing DMS logs related to RLCM, the Gateway software generates Windows NT event logs for various cases such as E1/T1 software faults, DSP faults, client session events, and initialization logs. Audits of user login successes or failures are also generated as event logs. Logs can be reviewed remotely on the Administration LAN from within the web-based Element Manager interface or by running the Windows NT event viewer.

#### There are five categories of logs:

- **Error.** Error logs indicate a critical event, where the Gateway is in a critical condition, such as failure to initialize hardware, or out of memory.
- **Warning.** Warning logs indicate a non-critical event, and are usually generated after a logic error has been detected in the software and recovery action has been taken.
- **Informational.** Informational logs provide information about the state of the Gateway.
- **Success audit.** Success audit logs provide details of successful logins. A success audit event is generated when the user has successfully logged in. Failure audit. Failure audit logs provide details of failed login attempts. A failure audit event is generated if:
  - A user has tried to log in to a currently running session.
  - A user has provided incorrect login information.
  - A user has exceeded the maximum number of failed login attempts (datafillable at the gateway).

# Attendant Console Quick References

## Posting Consoles and associated lines

>MAPCI;MTC;LNS;LTP;Level IBNCON

>Select C <console CLI>

(Shows DMODEM attached; BSY, DIAG, & RTS from here)

>MAPCI;IBNMEAS;ACMON;Select C <console cli>

(Best place to observe console. See Table FNMAP for console CLIs).

## AC Command (@ CI: level)

>HELP AC will give optional parameters for using the command.

Example: >AC <console CLI> DISPL LAMPS

## MT Command (@ CI: level)

Shows keyhits from console via dmodem to CC.

>MT <operation> {START, DISPL, STOP, RESET}

<console number> {From IBNCON level of MAP}

## QQ Command (@ CI: level)

Used to query the incoming call queues for ICIs and subgroups.

>QQ <customer-name> STRING <subgroup#:> {0-7} <option:>  
{CALLQ, ICIQ [<icicode:> {0-254}]}

## Trouble Key Assignment

1. Add a trouble key in table FNMAP:

TABLE: FNMAP

CONSNCSU41 SPECL TRBL

2. Add trouble codes in Table TRBLCODE:

CODE	MESSAGE	ALARM
2	TRUNK_TROUBLE	MJ
3	KEY_TROUBLE	MJ
7	CNF_DIS	CONSMINR
24	BOMB_THREAT_CALL	CR

3. Accessing the trouble key:

- a. Press TROUBLE key\*. The TROUBLE lamp goes on and the display prompts for the trouble code  
*Display:* TROUBLE: INPUT
- b. Enter the appropriate two-digit numeric code. (If you are not sure of the correct trouble code for your situation press \* or # to activate query mode; the display will show all codes and descriptions.)  
*Display:* <Code Description>
- c. Press TROUBLE key. The TROUBLE lamp goes off and a trouble report (IBN109 log & alarm) is generated to maintenance personnel. The IBN109 log identifies the parties involved in the call, the console, and other information on the state of the active loop at the time the problem occurred.

**\*Note:** To cancel the feature, press RELEASE DEST key prior to step c.

## XPMIST the Attendant Console

To XPMIST the console, use the node and terminal number of the DMO-DEM. Information on breaking down Attendant Console XPMIST can be found in module *ACUTIL*.

## Table References:

CUSTCONS	lists customer groups' consoles.
SUBGRP	lists DN to reach consoles ext.
ATTCONS	lists console names and LENS.
CONF3PR	contains the 3-port conference circuits.
DMODEM	contains the Dmodem cards.
FNMAP	datafill for all console keys.
ICIDATA	lists console ICI keys.
TRBLCODE	trouble code messages.
WCKCODES	lists data for wild keys.
SVRCKT	contains NT3X68AB DTMF Senders.
ACEES	AC End-to-End Signalling Feature.

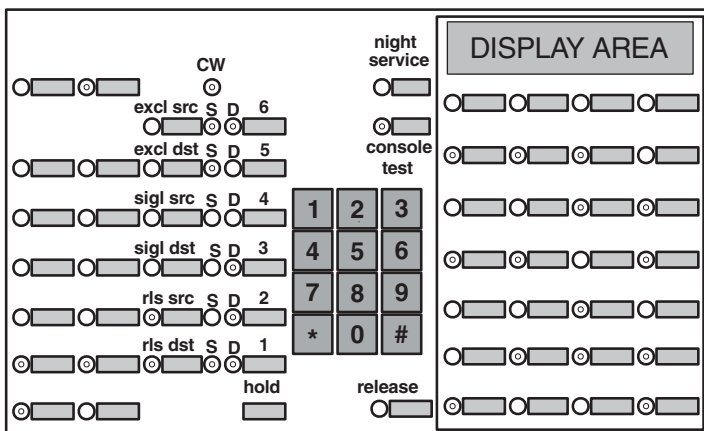

## Documentation:

NTP 297-2031-100, *MDC Services Attendant Console OA & M*  
NTP 297-YYYY-350, *Translations Guides*

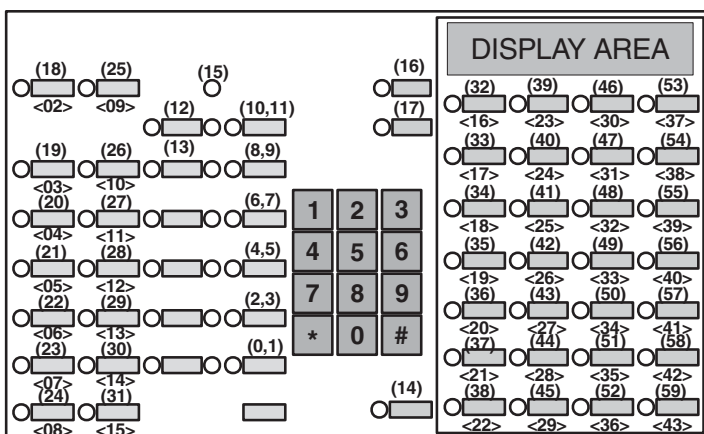

**LOGS:** IBN, PM, TRK

**OMs:** ACSYSTR, ACRTS, ACTRBL, ACTAKEDN, IBNAC,  
IBNSGLDN

## Attendant Console Lamp Keyboard Layout

## Attendant Console Lamp to Physical Key Mapping

(XX) Represents the external lamp number.

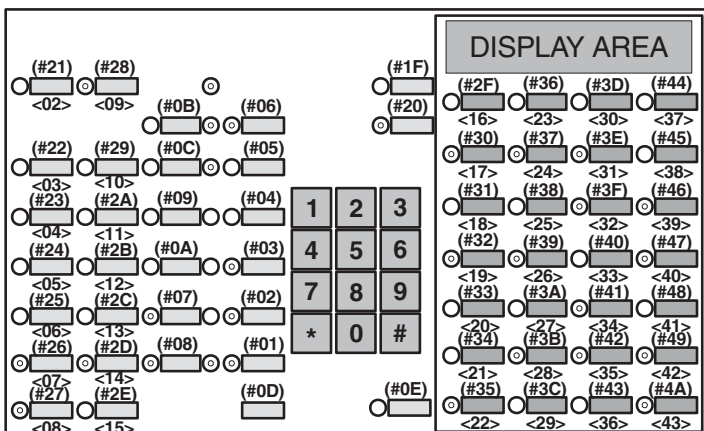

<YY> Represents the physical key number (found in table FNMAP).

### To calculate the PMIST lamp and group number

Lamp # = External lamp # MOD 16

Group # = External lamp # / 16

## Attendant Console Internal to Physical Key Mapping

(#XX) Represents the internal key number (seen in PMIST).

<YY> Represents the physical key number (found in table FNMAP).

# CCS7 Quick References

(NTP 297-YYYY-350, Translations Guides)

## CCS7 Terminology

**Associated Route** — Direct route between signalling points; route where DPC of routeset equals DPC of linkset.

**Connectionless** — Signalling type for all signalling that is not associated with set-up or take-down (E800 database query, maintenance, etc.)

**Connection-Oriented** — Signalling type used for setup and take-down of calls (i.e. ISUP).

**Link** — Communication channel between two adjacent signalling points.

**Linkset** — A group of signalling links connecting two signalling points.

**Point Code** — Every node in the network has its own unique point code used to direct messages. Nine digit point code format equals: <network #> <cluster #> <member #>

**OPC** (Origination Point Code)

**DPC** (Destination Point Code)

**Quasi-associated** — Indirect signalling route through an STP.

**Route** — A signalling path in the signalling network; this path may consist of one or more linksets to a destination.

**Routeset** — A logical grouping of routes towards a destination.

**SCP** — Service Control Point provides network access to transaction services (database queries).

**SP** — Signalling Point is a node in the network that provides trunk signalling only.

**SSP** — Service Switching Point is a node in the network that originates and terminates CCS7 messages (connectionless & connection-oriented).

**SL** — Signalling Links interconnect adjacent nodes in the network:

**A-link** access links connect SPs, SSPs, and SCPs to STPs.

**B-link** bridge links connect mated STP pairs to other mated STP pairs.

**C-link** cross links connect two STPs creating mated a pair.

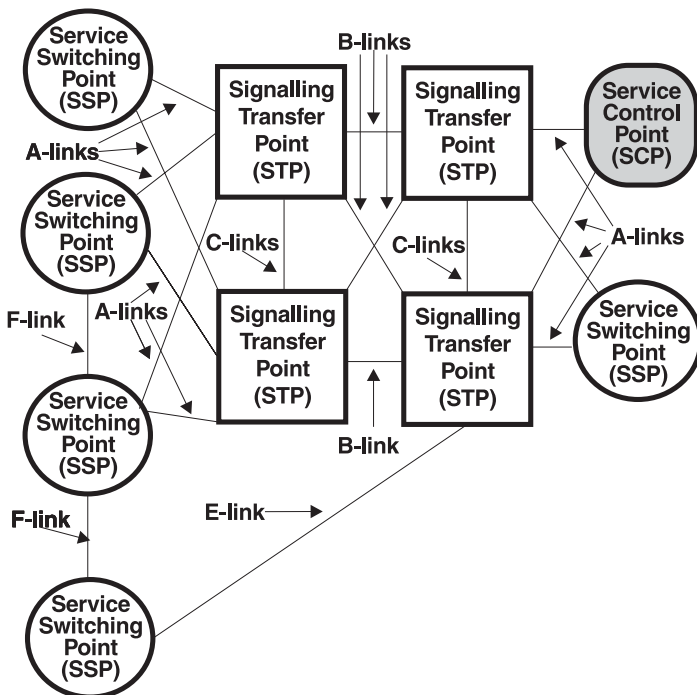

**D-link** diagonal links connect STP quads in different regions (primary to secondary STPs).

**E-link** extended links connect an SPs, SSPs, or SCPs to an STP in a different region.

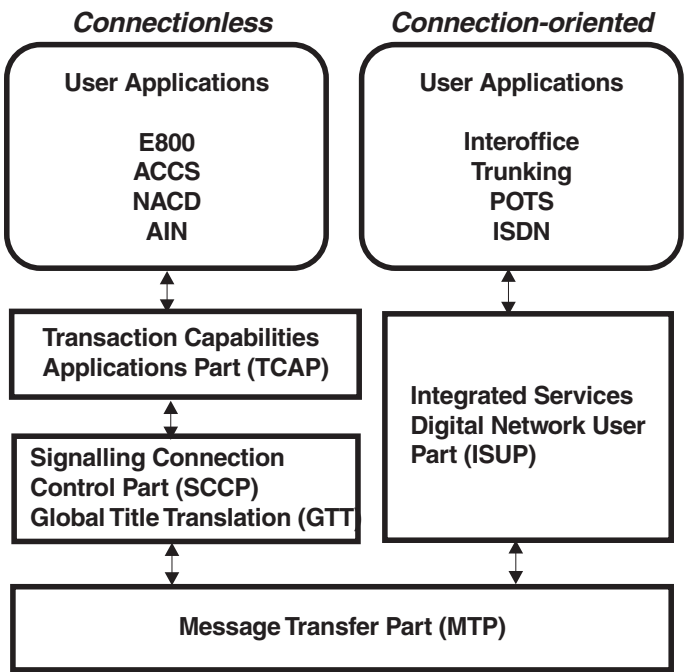

**F-link** fully associated links interconnect SPs, SSPs, and SCPs using associated signalling.

**STP** — The STP (Signal Transfer Point) is a node in the network that route messages between network nodes using signalling links; STPs do not originate or terminate CCS7 messages other than network management messages.

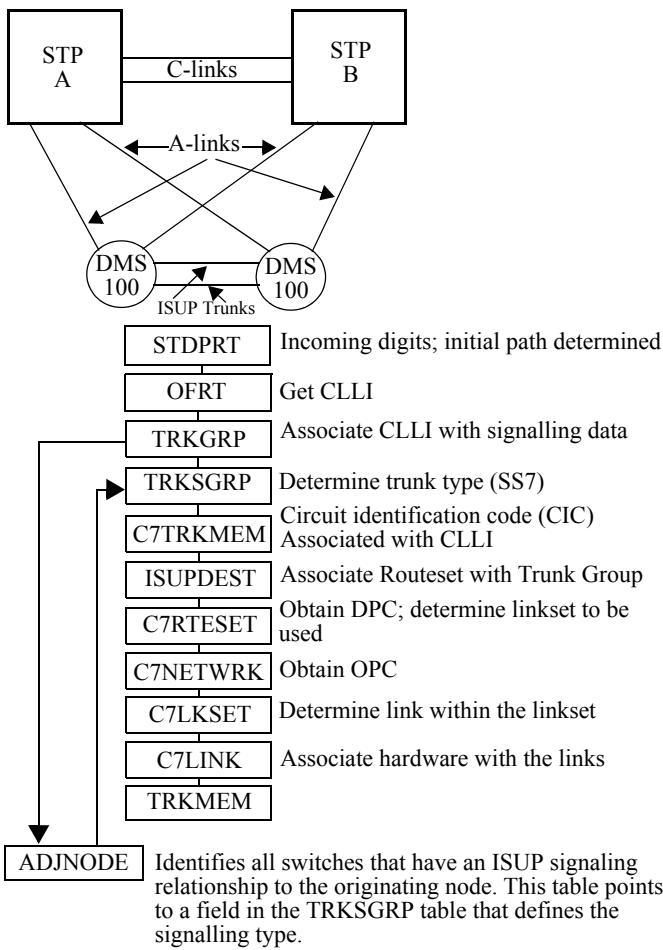

## CCS7 Linksets

CCS7 Protocol Components

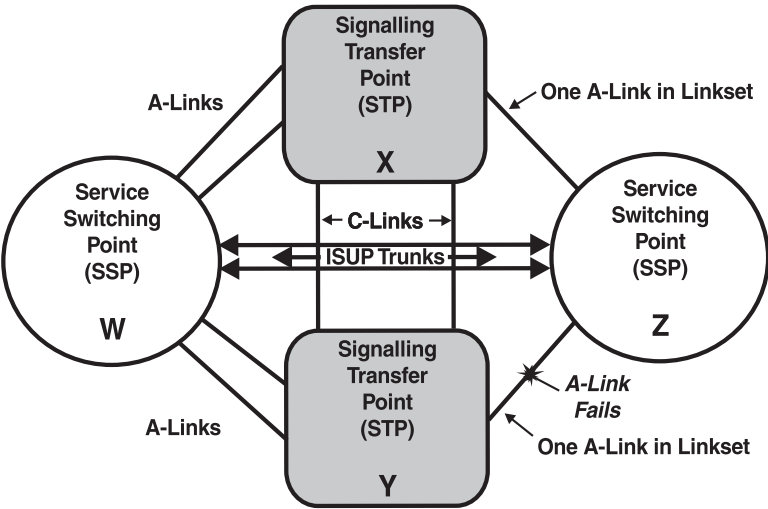

ISUP Trunk Selection

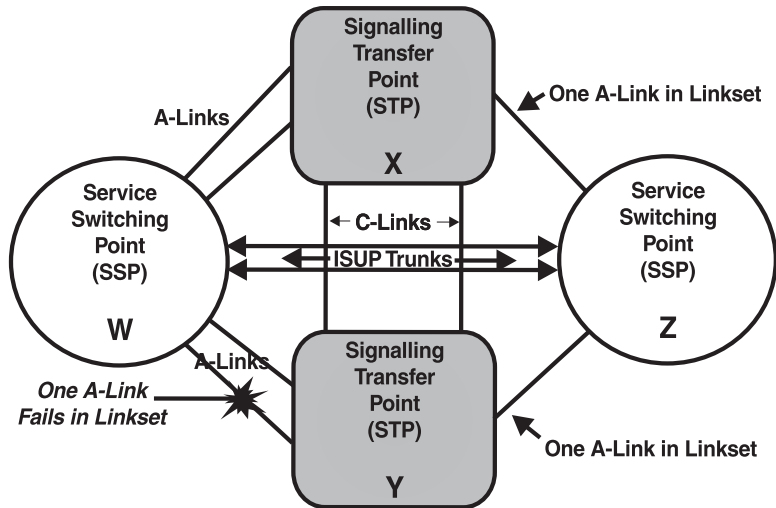

Note: You can use the C7RENAME command to change the name of: Linkset, Routeset, or a Network.

CCS7 Fault scenario—between STP “Y” and SSP “Z”—concerns a single link failure in a linkset with one “A” link.

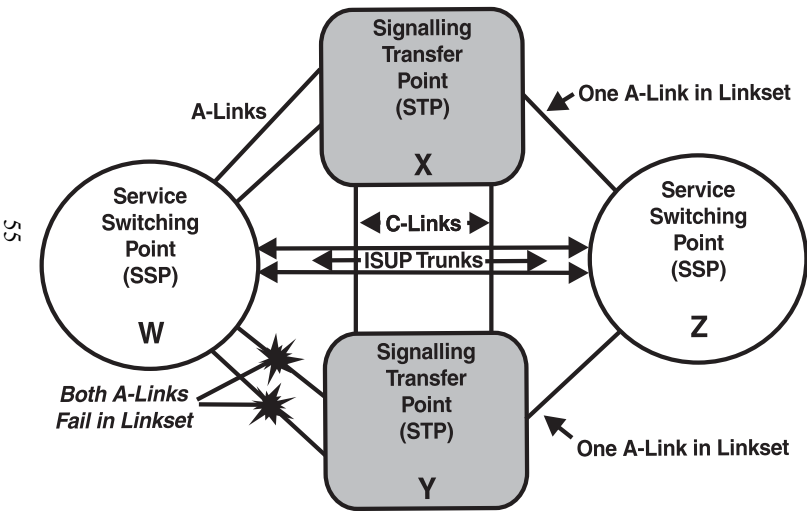

EVENT	ACTIVITY AT NODE W AND X	ACTIVITY AT NODE Y AND Z
1		The single A link between SSP “Z” and STP “Y” fails—only one link in linkset
2	<b>Alarms/Logs:</b> ** CCS167 Route Restricted <b>Note:</b> CCS167 Route Restricted alarm and log notification are sent to every SS7 NODE when a linkset fails and causes a route restriction.	<b>Alarms/Logs:</b> ** CCS101 Link failure * CCS164 Link unavailable ** CCS175 Routeset restricted ** CCS167 Route restricted Possible PM/C7UP Logs, CCS198 SLMPR
3		All SS7 messaging diverted to links X/Z. Estimate link X/Z occupancy using C7LKSET command QUERYTRF.
4	<b>Action:</b> Network status information only, since no other alarms or logs are available concerning specific links	Action at nodes Y or Z control office prime and control center:  Follow detailed DMS-100 CCS alarm clearing procedures in current NTP 297-YYYY-543.
5	<b>Recovery Logs:</b> CCS166 Route allowed	<b>Recovery Logs:</b> CCS102 Link Sync CCS163 Link available CCS155 Routeset available CCS166 Route allowed PM Logs

CCS7 Fault scenario—between STP “Y” and SSP “W”—concerns a single link failure in a linkset with two “A” links.

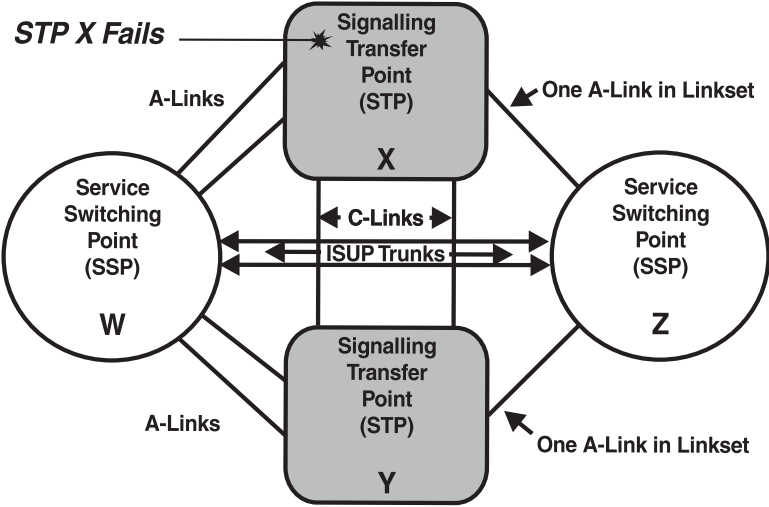

EVENT	ACTIVITY AT NODE W AND Y	ACTIVITY AT NODE X AND Z
1	One link fails in Linkset W/Y	
2	<b>Alarms/Logs:</b> * CCS101 Link failure * CCS164 Link unavailable Possible PM, C7UP Logs & CCS198 SLMPR	<b>Alarms/Logs:</b> Normally no logs or alarms are provided with this scenario.
3	All SS7 messaging diverted to links W/X. Estimate link W/X occupancy using C7LKSET command QUERYTRF.	
4	Action at nodes Y or Z control office prime and control center: Follow detailed DMS-100 CCS alarm clearing procedures in current NTP 297-YYYY-543.	<b>Action:</b> Network status information only, since no other alarms or logs are available concerning specific links.
5	<b>Recovery Logs:</b> CCS102 Link Sync CCS102 Link Sync CCS163 Link available CCS163 Link available CCS155 Routeset available CCS166 Route allowed PM Logs	<b>Recovery Logs:</b> CCS166 Route allowed

**CCS7 Fault scenario—between STP “Y” and SSP “W”—concerns both links failing in a linkset with two “A” links.**

EVENT	ACTIVITY AT NODE W AND Y	ACTIVITY AT NODE X AND Z
1	Two links fails in Linkset W/Y	
2	<b>Alarms/Logs:</b> <ul style="list-style-type: none"> <li>* CCS101 Link failure</li> <li>* CCS101 Link failure</li> <li>* CCS164 Link unavailable</li> <li>* CCS164 Link unavailable</li> <li>** CCS175 Routeset restricted</li> <li>** CCS167 Route restricted</li> </ul> Possible PM, C7UP Logs & CCS198 SLMPR	<b>Alarms/Logs:</b> <ul style="list-style-type: none"> <li>** CCS167 Route restricted.</li> </ul> <b>Note:</b> CCS167 Route restricted alarm and log notification are sent to every SS7 NODE when a linkset fails and causes a route restriction.
3	All SS7 messaging diverted to links W/X. Estimate link W/X occupancy using C7LKSET command QUERYTRF.	
4	Action at nodes Y or Z control office prime and control center:  Follow detailed DMS-100 CCS alarm clearing procedures in current NTP 297-YYYY-543.	<b>Action:</b>  Network status information only, since no other alarms or logs are available concerning specific links.
5	<b>Recovery Logs:</b> <ul style="list-style-type: none"> <li>CCS102 Link Sync (one of the links)</li> <li>CCS102 Link Sync (another link)</li> <li>CCS163 Link available (one of the links)</li> <li>CCS163 Link available (another link)</li> </ul>	<b>Recovery Logs:</b> <ul style="list-style-type: none"> <li>CCS155 Routeset available</li> <li>CCS166 Route allowed</li> <li>PM Logs</li> </ul>

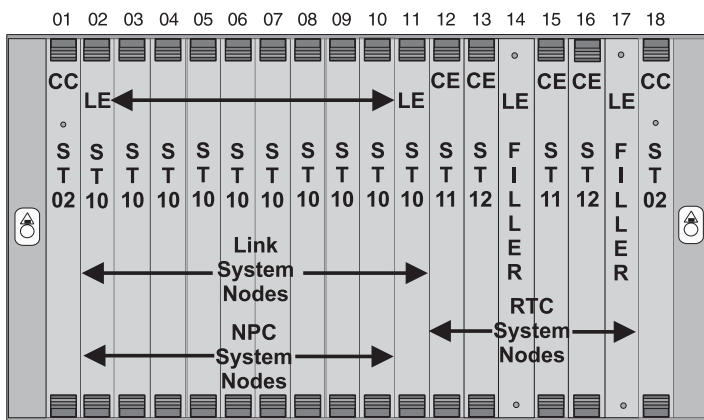

CCS7 Fault scenario— STP “X”—concerns a single STP failure.

EVENT	ACTIVITY AT NODE W AND Y	ACTIVITY AT NODE X AND Z
1		STP “X” fails.
2	<b>Alarms/Logs:</b> * CCS101 Link failure * CCS164 Link unavailable (log reports to every link to failed STP X) ** CCS175 Routeset restricted ** CCS168 Route prohibited *** CCS154 Routeset unavailable ** CCS167 Route restricted Possible PM, C7UP Logs & CCS198 SLMPR	<b>Alarms/Logs:</b> ** CCS167 Route restricted. <b>Note:</b> CCS167 Route restricted alarm and log notification are sent to every SS7 NODE when a linkset fails and causes a route restriction.
3	All SS7 messaging diverted to STP “Y”	
4	<b>Action:</b> Ensure A links to the working STP (Y) are not manual busy.	<b>Action:</b> Serious situation, network could be in jeopardy if other STP fails. Top priority to restore STP “X” and restore service. Use the following documents to clear alarms: DMS-100 CCS alarm clearing procedures..... 297-YYYY-543 DMS SN STP Alarm Performance Monitoring Procedures .....297-8101-543
5	<b>Recovery Logs:</b> CCS102 Link Sync CCS102 Link Sync CCS163 Link available CCS163 Link available CCS155 Routeset available CCS166 Route allowed PM Logs	<b>Recovery Logs:</b> CCS166 Route allowed

# Broadband STP Quick References

## Broadband STP Control CAM Shelf Front

## Broadband STP Control CAM Rear Shelf with Number Portability Controller (NPC) Mission Cards in slots 2 - 5

**Note:** Slots 13 & 14 and 16 & 17 may be Double-slot SCSI Disk cards.

**OAM& P Workstation — NTST30**  
**Remote Access Server — NTST32**  
**10Base-T/10Base-2 Ethernet Hub — NTST31**

## CAM Shelf Component PECs

- NTST00 — Control or extension CAM shelf
- NTST01 — Fan Unit
- NTST02 — Single or dual-shelf CAM Controller (CC) Mission Card
- NTST07 — OC-3 Transition Module (TM)
- NTST08 — DS0A Transition Module (TM)
- NTST09 — Power/SCSI/Ethernet (PSE) Transition Module (TM)
- NTST10 — Link Engine (LE) Mission Card
- NTST11 — Single or dual-shelf Real-time Controller (RTC) Mission CP
- NTST12 — Single or two-slot SCSI Disk Card
- NTST13 — Filler Card NTST34 — 19-inch Frame NTST35 — Air Filter
- NTST58 — V.35 Transition Module (TM)

STP Broadband Quick References continue on next page.

## Broadband STP OAM&P Workstation and Network Equipment Configuration Table

Item	Sample	Customer Defined
<b>Workstation Network Configuration (TCP/IP Properties):</b>		
IP Address (Workstation-1)	192.168.1.50	
Subnet Mask	255.255.255.0	
Gateway (Remote Access Server)	192.168.1.1	
<b>Remote Access Server (RAS) Configuration Options:</b>		
<b>RAS General:</b>		
Name	FIELD	FIELD
Password	SERVICE	SERVICE
<b>RAS IP General:</b>		
Rem. Access Svr (RAS) IP Address	192.168.1.1	
Subnet Mask	255.255.255.0	
Default Router (Same as RAS)	192.168.1.1	
<b>RAS IP Addresses (If using PPP connections):</b>		
Port 1	192.168.1.101	
Port 2	192.168.1.102	
<b>Optional LAN Printer:</b>		
IP Address	192.168.1.20	
Subnet Mask	255.255.255.0	
IP Gateway (Same as RAS)	192.168.1.1	
<b>Real Time Controller (RTC) IP Addresses</b>		
RTC NODE 12	192.168.1.12	
RTC NODE 15	192.168.1.15	
<b>RTC Ethernet ID Hardware Addresses (*Samples are examples):</b>		
Slot 12	11:22:33:44:55:66*	
Slot 15	11:22:33:44:55:67*	
Spare	11:22:33:44:55:68*	
<b>BOOTP Server Network Configuration:</b>		
Network Address: (Subnet)	192.168.1.0	
Default Gateway: (Same as RAS)	192.168.1.1	
Subnet Mask	255.255.255.0	
<b>ICCM Addresses</b>		
ICCM 01 Address	10.0.0.1	10.0.0.1
ICCM 02 Address	10.0.0.2	10.0.0.2
ICCM Subnet Mask	255.0.0.0	255.0.0.0
Default Gateway	192.168.1.1	
Ethernet Subnet Mask	255.255.255.0	
ICCM 01 Ethernet IP Address	192.168.1	
ICCM 02 Ethernet IP Address	192.168.2	

### CAM Shelf LED State Notes

**Note:** Filler cards do not have active LEDs.

**Note:** Unlit LED(s) on the front shelf do *not* always indicate a problem.

- SCSI Disk cards always display a dark LED on the front CAM shelf.
- Real-time Controller (RTC), CAM Controller (CC), or Application System Nodes LED are *not* lit when in the off-line state.
- Card guides contain Filler Cards.
- Card guides contain SCSI Disk Cards

**Note:** Other than the cards above, a dark LED indicate the card is not functioning properly.

**Note:** Flashing green LED(s) indicate the associated card(s) are operational, but are not currently available for use.

**Note:** Flashing green LED(s) on the front of a CAM shelf indicate that the associated mission cards are enabled, but locked.

## Circuit Pack Descriptions

**Note:** The following circuit pack descriptions are for most of the packs shown within the various hardware shelves in this QRG.

**NTAX78AB or BA** — The Enhanced time switch (ETS) card is functionally equivalent to the NT6X44CA time switch card. As of NA003, the NTAX78 replaces the NT6X44 that will implement DTA for ESMU or SMA. As of NA004, SMA interfacing TR-303 compliant terminals require the NTAX78 card. The ETS card is required to perform ISDN DTA functions on an ESMU or any subtending RCU ISDN lines.

**NTBX01AB** — This enhanced ISDN card is a redesign of the ISDN signaling pre-processor (ISP) card. Memory size and processor speed have been increased to meet changing system requirements. The card provides interfaces both to the signaling processor (SP) and to the speech bus. It terminates a single messaging link for each D-channel handler (DCH) and processes layer-3 information. Signaling information that is extracted by the DCH is sent to the master processor (MP) by way of the enhanced ISDN signaling pre-processor (EISP).

**NTBX02** — The D-channel handler card is the main interface to all D-channels through the speech bus. The DCH sets up communication with an ISDN terminal on request from the terminal or the line group controller (LGC) master processor (MP). NTBX02BA is an enhanced DCH card.

**NTBX34** — This LCME Processor card is responsible for processing associated with scanning the line cards for calls, setting up call connections through the digroup controller card (NTBX35) and DMS-X messaging with the Host. This card also carries out background tasks for diagnostics. It is also located in the SRU.

**NTBX35** — The LCME Digroup Controller card provides time switching for external and internal channel assignments, and provides digital loop around paths. It also interface with the Link Control Card (LCC) and the Line Drawers. It is also located in the SRU.

**NTBX36** — This is the Bus Interface Card (BIC) for ISDN LCME and is located in the Line Drawer.

**NTBX72** — The ISDN enhanced LCME battery and ringing router card monitors the current of various ANI/COIN inputs selected by a multiplexer (MUX) circuit.

**NTDX15AA** — This +/-5V power converter provides a regulated and protected nominal output of +5.15 V and -5.2 V. The maximum current available on the positive output is determined by the negative output load. At no load, up to 69 Amps can be drawn from the positive rail; at -10 A, up to 55 Amps can be drawn from the positive rail. This pack supports the following products: high-speed interface (HSI); network programming platform (NPP); channel frame processor (CFP). It can be used in the SNSE CM/SLM shelf.

**NTDX15AB** is the global +/-5V power converter.

**NTDX16AA** — The +5V dual power converter can provide full redundancy for an LPP/LIS shelf. If one NTDX16 power converter fails, or requires power-down or replacement, the other NTDX16 power converter supplies power for the entire LPP or LIS shelf.

**NTDX91** — A dual power converter used in the file processor (FP) storage device shelf.

**NTEX17** — The AA card is a 1 Meg Modem line card that provides for data networking as well as a POTS interface. The CA and DA cards are xDSL line cards that provide full voice service and high-speed data communications in the 1-Meg Modem Service. The DA is used for the RLCM and STAR remotes and works only with the NTEX54CA DBIC card.

**NTEX20** — The intra F-bus terminator PBs (NTEX20AA and NTEX20BA) provide intrashelf F-bus termination. NTEX20AA provides intrashelf termination for F-bus (A) 0 signals. NTEX20BA provides intrashelf termination for F-bus (B) 1 signals.

**NTEX22** — The integrated processor & F-bus interface card (IPF) provides a LIU7 link general processor, a dual F-bus interface capability, and is used for LIUs, EIUs, FRIUs, and NUIs. It replaces the NT9X13CA link general processor and the NT9X75AA F-bus to F-bus interface. In regard to the LIU7, the NTEX22BA card is optional in North America, but is required in the United Kingdom. The NTEX22BA is functionally identical to the NTEX22AA, except that the BA card has 8 Mbytes of DRAM. The AA card is no longer supported. The upgrade NTEX22BB is functionally identical to the NTEX22AA and BA cards except that the BB card supports 32-bit asynchronous P-bus slaves and spared peripherals. The NTEX22CA is a 32MB LIU7 Integrated Processor that provides 2.5 to 2.7 times the capacity of the 8MB LIU7. The FA version is a 128MB card.

**NTEX25** — The NTEX25AA network interface unit (NIU) channel bus controller (CBC) card in the link peripheral processor (LPP) allows direct network connection to the LPP. The NTEX25AA takes channels from the network and transmits them to the application specific units (ASU) over the C-bus, and takes channels from the ASUs via the C-bus and transmits them to both planes of the network. The NIU is a hot standby. Unit 0 uses the NTEX25AA, which interfaces to C-bus 0 and Unit 1 uses the NTEX25BA, which interfaces to C-bus 1.

**NTEX26** — The NTEX26AA link interface unit (LIU) channel-bus interface (CBI) circuit pack is used in the CCS7 LIU (LIU7) within a link peripheral processor (LPP) equipped for channelized access. The NTEX26AA is located behind the NT9X76AA signaling terminal (ST) in an LIU7.

**NTEX28** — The NTEX28AA network interface unit (NIU) DS30 link interface Paddle Board (LPB) is used in the link peripheral processor (LPP) for channel access. The card is a 4-port DS30 link interface board that provides DS30 links between the peripheral side (P-side) of the network and channel bus controllers (CBC) in an application-specific unit (ASU) shelf.

**NTEX30** — The NTEX30AA T1 analog paddle board (T1PB) is the printed circuit pack (PCP) within the frame relay interface unit (FRIU) that provides the interface between the NTEX31AA frame relay access processor (FRAP) and the physical T1 transmission medium. T1PB is also used with NTEX31BA-based FRIUs.

**NTEX31** — The frame relay access processor (FRAP) is the main processor for the frame relay interface unit (FRIU).

**NTEX54** — An enhanced data bus interface card (DBIC) required in LCM drawers that provide Ethernet 1 Meg Modem Service. The DBIC separates the voice and data traffic. The card multiplexes the voice traffic to standard DS-30A interfaces to the existing circuit switched voice network. The card multiplexes the data traffic to one 10BaseT Ethernet connection to the transport network. **NTEX54BAAB, BAAC, and BAAD are for Phase 2B.**

**NTFX09** — The NTFX09AA network channel bus (C-bus) interface Paddle Board (CIP) is used in the X.25/X.75 link interface unit (XLIU). The CIP is one of three circuit packs that form the XLIU. The CIP connects to the backplane C-bus to provide the high-level data link control (HDLC) frame processor (HFP) with channelized data. When combined with software, the XLIU hardware implements the DMS-100 packet handler (DMSPH).

**NTFX10** — The NTFX10AA high-level data link control (HDLC) frame processor (HFP) circuit pack is used in the X.25/X.75 link interface unit (XLIU). The HFP is one of three circuit packs that together form the XLIU. When combined with software, the XLIU hardware implements the DMS-100 packet handler (DMS-PH). By provisioning the LIU shelf with a network interface unit (NIU) pair, each XLIU will have logical access to both the message switch frame bus (F-bus) and the network channel bus (C-bus).

**NTFX30** — The IOM controller card (NTFX30), located in slot 3 of the ISM shelf, contains hardware and firmware to support 16 general purpose ports. The ports include the RS-232C, V.35, current loop and PERTEC. The hardware and firmware also support two DS-30 links to the message switch (MS) and two optional external SCSI devices on the storage media card. The NTFX30 controls the entire operation of the IOM.

**NTFX31** — The IOM Paddle Board (NTFX31) contains the power feed circuits. The Paddle Board contains a maximum of 16 smart connectors and circuits. The Paddle Board implements a local loopback for diagnostic purposes. The Paddle Board is at the rear of the ISM shelf backplane at the slot 3 position.

**NTFX32** — The storage media card (NTFX32AA) occupies slot 4 of the ISM shelf. This card has slots for plug-in digital audio tape (DAT) (NTFX32CA) and disk drive unit (DDU) (NTFX32BA) plug-in units.

**NTFX42** — The ISM processor card ISM processor circuit card is designed to be functionally compatible with the existing TM/MTM service circuit cards. It provides a combined functionality of the NT0X70, NT3X45, NT2X53, and NT2X59 controller cards.

**NTFX43** — The ISM DC converter card provides regulated and protected power supplies required by the ISM shelf. The converted voltages are +5 V, +12 V, +25 V, and -15 V (dc).

**NTFX44** — The improved loop test accessory (ILTA) card is provisionable in the ISM shelf and is designed to be used with some external test units like the Mod 3703 LTC or Teradyne's 4-Tel Colt. It connects to up to four NT2X90 IC/OG test trunks. See the ISM shelf and the NTFX44/NT2X90 assignments within this QRG.

**NTGX04** — The NTG04AA Bus Terminal Transition Module Paddle Board and the NTGX04BA Bus Extender Transition Module Paddle Board can be found in the rear of the MSM shelves.

**NTGX05** — NTGX05AA 68-kbyte memory card is part of the DMS Mail Service Peripheral Module. It provides the processing environment for the common system program, for example, directory and message transfer agent. The 68Kbyte card supports two RS-232C Electronic Industries Assoc. communication ports.

**NTGX06** — The NTG06AA 68K Transition Module Paddle Board can be found in the rear of the MSM shelves.

**NTGX07** — The NTG07AA Modem Transition Module Paddle Board can be found in the rear of the MSM shelves.

**NTGX08** — The NTGX08AA T1 Main card terminates 4 spans and is located on the electronics shelves of the MSM.

**NTGX09** — The NTG08AA T1 Transition Module Paddle Board can be found in the rear of the MSM shelves.

**NTGX10** — The NTGX10AA Bus Controller Main card provides system clocks and acts as the bus master for the MSM.

**NTGX11** — The NTGX11AA Bus Controller Transition Module Paddle Board can be found in the rear of the MSM shelves.

**NTGX12** — The NTGX12AA VP12 voice channel cards on an MSM provide a maximum of 24 channels for each SPN, or 12 channels for each voice processor card. The cards provide the channels for a maximum of four SPNs to an NTGX0201 electronics shelf.

**NTGX13** — This is a 600MB disk card that can be used in a MSM.

**NTGX14** — The NTGX14AA is a 1200MB disk card and the NTGX14BA is a dual 1200MB disk card used in a MSM.

**NTGX15** — The NTGX15AA Disk Tape Module Assembly is used in the primary disk shelf of the MSM.

**NTLX02** — The processor element (PE) provides XA-Core with a computing device that has fault detection and a spare PE. AA through AC is a PPC604 256MB processor and the AD is a MPC7401 512MB processor.

**NTLX03** — The input/output processor (IOP) for the XA-Core comes in two versions: the NTLX03AA one-slot IOP for CMIC and RTIF packets and the NTLX03BA two-slot IOP for the 4MB disk drive packet and DAT tape drive packet.

**NTLX05** — The OC-3 two-port IF packet provides the CMIC interconnect between the Message Switch and XA-Core.

**NTLX06** — Disk drive packet for XA-Core (AA = 4GB; AB = 8.7GB).

**NTLX07** — This is the digital audio tape (DAT) tape drive packet.

**NTLX08** — This is the RS232/RS422 remote terminal IF (RTIF).

**NTLX09** — This is the Ethernet remote terminal IF (RTIF).

**NTLX12** — The shelf interface module (SIM) provides the power for the XA-Core. The packs are located on the back shelf.

**NTLX44** — The Sync resource module (RM) provides the timing source for the building internal timing source (BITS).

**NTLX14** — This shared memory (SM) card provides the XA-Core with a memory device for data store. The AA version is 128MB; BA is 256MB; the CA is 384MB; and the DA is 512MB.

**NTLX61** — This shelf interface module (SIM) is the DC power conditioner for SPM NTLX51AA dual-shelf assembly.

**NTLX63** — The common equipment module (CEM), located in the SPM, provides centralized resources—bandwidth allocation, communication/messaging, computing platform, synchronization, etc.

**NTLX65** — The digital signal processor (DSP) resource module (RM) provides digital signal processing services for the SPM.

**NTLX66** — The voice signal processor (VSP) resource module (RM) provides resources for call processing such as echo cancellation for the SPM.

**NTLX71** — This OC-3 interface module is a synchronous optical network (SONET) OC-3 trunk interface for the SPM. It allows the SPM to terminate SONET OC-3 transmission systems carrying DS3, asynchronous VT1.5, and byte-synchronous VT1.5 payloads.

**NTL73** — The asynchronous transfer mode (ATM) resource module (RM) provides ATM digital signal processing services for the SPM.

**NTLX74** — The synchronous transport signal (STS) resource module (RM) provides synchronous transport signal-level one (STS-1) digital signal processing services for the SPM.

**NTLX82** — This common equipment module (CEM), located in the SPM, is an enhanced replacement for the NTLX63AA CEM.

**NTMX72** — A power converter provides +5 V, +12 V, -12 V power for the RCC2 and GPP CPM shelves. The NTMX72AA pack has test points, a reset switch, and power fail LED while the NTMX73AB has only a fail and active LED.

**NTMX73** — This pulse code modulation (PCM) signaling pack controls all low-level PCM and DS1 signaling tasks, and it generates the system clock. The PCM and DS1 signaling tasks include link maintenance, receiving and sending derived data link (DDL), and receiving and sending ABCD bits. It supports DS1 and PCM30 trunks on both the core side (C-side) and the peripheral side (P-side). This pack replaces the 6X28, 6X41, 6X44, and 6X86 packs, either partially or totally.

**NTMX74** — The principal function of this DS30 interface pack is to convert data that come from the matrix in DS60 format into balanced DS30A format, and to convert balanced DS30A signals into DS60 format for the matrix. See the RCC2 shelf in this QRG.

**NTMX75** — This enhanced matrix pack performs all speech channel switching functions for the RCC2 and GPP CPM shelves. Those functions include: providing digital connections between all C- and P-side channels, moving ABCD bits from the DS1 ports to the SIGP pack, supporting the parallel buses for service circuits, selecting C-side input and output links and channels, and selecting P-side link connections. The DA pack version is needed for the 16 to 20 C-side DS1 upgrade for the RCC2.

**NTMX76** — This message and tone generator card provides DMSX and HDLC messaging capability, and tone generation for DMS-100

XMS-based peripheral modules. It is a hybrid of features in the NT6X69 & NT6X42, with added logic for extra features. The AB version is required if the RSC-S will also support Spontaneous Call Waiting Display (SCWID) based on an Analog Display Services Interface (ADSI) service. The AB version is also required in the LTC or LGC that supports the Star Remote. The AD version is used in the TOPS Voice over IP Gateway peripheral.

**NTMX77AA** — The unified processor card replaced the NT6X45, NT6X46, and the NT6X47 cards with the XPM PLUS Upgrade. The NTMX77AA is a 68020-based unified processor (UP) CP. The NTMX77AA is the main processing unit in the central processor and memory (CPM) shelf. It controls all the service packs, and the trunks and lines, and communicates with the central control.

**NTMX79** — This DS30 extender pack transfers signals between the main RCC2-EXT shelf and the packs placed in the extension shelf of the RCC2 and GPP CPM extension shelf, and provides +5 V and +12 V or -12 V of power.

**NTMX81** — This dual DS1 packet pack's main function is to provide an interface between two physical DS1 links, and to perform low-level DS1 signaling and speech interface functions. The BA version smaller packet is needed for the 16 to 20 C-side DS1 RCC2 upgrade (see the RCC2 shelf hardware in this QRG).

**NTMX87** — The quad frame carrier card provides a DS1 interface between the SMA2 shelf and the RDT, and the RCC2 and the RSC. It also supports the GPP CPM for PCM30. The NTMX87 is a normal sized circuit card that contains four slots (0-3) in its faceplate. Smaller-sized circuit cards known as dual DS1 NTMX81 or PCM30 NMTX82 packets are inserted into these slots to supply the NTMX87AA with its functional identity. Each NTMX87 holds a maximum of four dual DS1 or PCM30 packets. Each packet has two ports for a total of 8 ports per card. The BA version is needed for the 16 to 20 C-side DS1 RCC2 upgrade.

**NTSX05** — A new revolution XPM Processor with 64 MB of DRAM that replaces the NTMX77 Unified Processor. It is ten times faster. It is equipped with NTSX06BA 60 MB or NTSX06CA 120MB Packet Cards, or NTSX06AA Filler Packs when not equipped. It also features an Ethernet connection through the backplane for linkage to IP networking equipment.

**NT0X67** — This IOC terminator card contains terminating resistors for the IOCs parallel data bus.

**NT0X70** — This processor card is used in the TM, MTM, DRAM, and the STM. It performs or controls all of the operations accomplished by the components of the STM. It also store the load and includes circuits that generate the clock signal, check parity, and perform synchronization. The NT0X70BA is the international card.

**NT1X55** — The disk drive controller card, located on the IOC shelf, contains the logic to provide an interface to one DDU, always on port 0 at the MAP display. It physically connects 2 control cables using ports 2 and 3. Ports 0 and 1 are always unequipped. Because a DMS office requires at least two DDUs, at least two NT1X55s are required. They are housed in IOE frame 0 and IOE frame 1 respectively, within slot 4. The SCSI DDU (NT1X55FA), also referred to as an IOC DDU, is a disk drive mounted directly on the IOC card. It replaces the disk drive controller NT1X55DA card and associated DDU in the DDU shelf. The NT0X44BB card is the international version of the DDU.

**NT1X62** — The I/O message processor card, located on the IOC shelf, contains a microprocessor capable of connecting serial message links to the message switch, and a parallel data bus to the individual device controller cards. The NT1X62 controls the overall operation of the IOC. The NT1X62CB functions the same as the existing NT1X62CA; however to increase robustness, it contains a new DS30 interface using a customized N03 integrated circuit (IC) device, and a modified 00B reset circuitry.

**NT1X67** — The terminal controller card, located in the IOC shelf, contains the logic to provide an interface for any combination of four VDUs, printers (read-only or keyboard send-receive), or modems. The number of NT1X67s required depends on the number of console devices equipped in the DMS switch.

**NT1X68** — The magnetic tape controller card contains the logic to provide an interface for one MTD, always on port 0 at the MAP display. It connects a read cable, a write cable, and a control cable, using ports 1, 2 and 3 respectively. Port 0 is always unequipped.

**NT1X75** — The DRAM controller card, located on the DRAM shelf, controls reception and transmission of messages to the DMS-core. It must always be located in slot 5, and assigned card number 0 and trunk module circuit number 0. The card can address up to 1 Mbyte of speech memory (which is equivalent to eight virtual cards: 8 x 128 Kbyte) representing about 254 s of speech. It can be configured to function as either a 16-, 24-, or 30-speech channel interface by means of switches. The switches provide the option of using the specified blocks of channels for uses other than DRAM.

**NT1X80** — The enhanced digital recorded announcement machine card (EDRAM) provides voice messages to the user. The NT1X80AA provides 4.3 minutes of announcement time and 30 announcement channels. The NT1X80AA is positioned as a peripheral module (PM) to the DMS (a dig-

ital trunk module (DTM). The card is located in a provisional trunk slot of the maintenance trunk module (MTM), the services trunk module (STM), or the integrated services module (ISM). The card has its own DS30 link and is connected to the network by means of a direct cable.

**NT1X89** — The multi-protocol controller (MPC) card, located on the IOC shelf, allows data communications between a DMS-100 switch and an external computer (for example, between a central office [(CO)] billing computer and a DMS-100 switch). The NT1X89 protocol software is downloaded from the DMS-100 CPU. The NT1X89BB card can be used for data communications that exceed 9600 bps.

**NT2X05AC** — The line module (LM) power pack with improved grounding card provides a regulated 24-V dc power supply and operates as a ringing generator in LMs and remote line modules (RLM) in DMS-100 equipment.

**NT2X06** — A power converter (5V/40 A) card, located in the MTM and RMM shelves, receives a nominal -48V input and converts it to a regulated 5-V output. The card monitors the output and shuts down the converter if the output exceeds a recommended threshold. If the converter is used with a frame supervisory panel (FSP), the shutdown continues until the RESET button on the converter faceplate is pushed.

**NT2X07** — A power converter (+5V/+12V 40 A) card, located in the DCM and JNET shelves (NT0X48AG Frame, receives a nominal -48V input and converts it to a regulated +5V/+12V output.

**NT2X09** — The 5V 40Amp power converter produces five outputs (-5V, -15V, +5V, +12V, and +24V dc). This pack is used in the TM, MTM, DRAM, STM, and RMM modules.

**NT2X21** — Terminal address interface and tone generator card is located in the LM or RLM. The tone generator section contains the audible tones encoded digitally in a ROM. Tones are applied as required via the R-MUX, under control of the Signaling Processor.

**NT2X22** — The connection memory and transmit multiplexer card is located in the LM or RLM. In addition to the 20 terminal transmit digroups, a maintenance input (looparound) from the Receive MUX, and tone generator input, are also applied to the input of the Transmit MUX. Four of these input signals are connected at any channel time, under Connection Memory control, to four “transmit” network digroups.

**NT2X23** — The receive multiplexer card is located in the LM or RLM. Under control of the Connection Memory, four of the “receive” network digroup inputs are selected every channel time, and connected to four of the 20 terminal receive digroups (TRD 0 through 19). The Receive MUX has an additional maintenance digroup output which can be connected to the Transmit MUX maintenance digroup input for looparound.

**NT2X24** — The signalling processor (SP) card, located in the LM or RLM, is the interface between the Master Processor and the control circuits in the line side of the LM. Through the SP, the line circuits, ringing multiplexers, programmable ringing generators and the activity circuit are controlled, and their status is reported.

**NT2X25** — The signalling processor interface provides an interface between the Signaling Processor, the Receive & Transmit MUX and the Connection Memory. Handles insertion and extraction of signalling information into and from the terminal digroups.

**NT2X26AA** — Master processor for the LM is a microprocessor unit with 48 Kbytes of dynamic RAM and 2 Kbytes of EPROM.

**NT2X26AB** — Master processor for the RLM.

**NT2X27AA-AF** — Various ringing generators.

**NT2X32** — This DCM processor card contains a microprocessor, up to 3K of RAM, and a 2K PROM controls the operation of the circuit cards in the DCM-B shelf by interpreting and acting on commands received from the DMS control module (CM) and responding to line changes detected by the supervision and signaling circuit cards. The processor, which communicates with the other circuit cards in the control section over the processor bus, includes interrupt capabilities and features single-line, per-card enable signals. Parity over data is used for detecting memory faults.

**NT2X33** — This card acts as a message processor card in the LM or as a control card for DCMs. In the LM, it is the interface between the Master Processor and the message channel to the CC. For the DCM, the control circuit card contains ROM-controlled message-handling circuits that work with the CM. It comprises a message buffer, reset-message detection-code firmware, and a sanity timer that is responsible for DCM sanity. It also includes a phase-locked loop (PLL) that extracts the 10.24-MHz clock signal from the network speech data. The NT2X33AE is used in ENET applications and is backward compatible with the NT2X33AB, which is used in older J-Net applications.

**NT2X34** — This card acts as a PP message processor in the LM and as a supervision card in the DCM. For the LM, it does not communicate with the CC, but with hierarchically equal units (i.e: the PP in other peripheral modules). The LM PPMP communicates with the Master Processor through a 1.5 Kbyte section of RAM, an interrupt line, and a first-in, first-out (FIFO) memory which stores causes of interrupts. For the DCM,

the supervision circuit card includes a hard-wired sequencer that exchanges channel supervisory messages with the network and parity-detection circuits that check incoming speech signals; the circuits are shared by all 120 speech channels. The circuit card also includes a processor bus interface with interrupt capabilities.

**NT2X35** — This DCM interface (DS1 line) circuit card contains the DS1 transmit and receive interface circuits. The circuit card sends alarm, error, and administration data to the signaling circuit card over the maintenance bus. It also includes a number of maintenance features such as local alarm input, remote alarm, slips, bipolar violation outputs, slip buffer phase monitoring outputs for office synchronization, and card-present output. The DCM interface also incorporates looparound for the DS1 circuits.

**NT2X36** — The network interface (NI) card is located in the LM or the DCM. Up to four speech links (0 - 3) from the network (receive) enter the LM at the Network Interface card. In this card, signals on the speech links are converted from diphasic serial format to unipolar serial data, and the clock and frame pulses are extracted. The DCM NI card contains eight biphasic modulators, one for both planes of the four DS30 ports. The circuit card includes parity generation for signals sent to the network as well as maintenance looparound circuits for the eight speech bits.

**NT2X37** — This tone circuit card in the DCM contains a digital tone generator and a channel memory, controls tone insertion and looparound. The tone circuit card generates dial tone, alternative dial tone, audible ring, and multifrequency (MF) signaling signals.

**NT2X38** — This DCM signalling card contains circuits that extract the A/B signaling bits from the DS1 data streams received from the DCM interface (DS1 line) circuit cards. A filter eliminates the effects of contact bounce and carrier hits, and a ROM-controlled scanner monitors buffers and reports changes in received A/B bits. Buffers and timers are used to produce output pulses and to insert A/B bits onto the speech bus, and provides line-monitoring and maintenance circuits for all DCM IF (DS1 line) circuit cards.

**NT2X45** — The trunk module (TM) interface card is used in the TM, MTM, DRAM, and OAU shelves. The TM interface card serves as the network interface for both planes of the network. In addition to providing two 2-way interfaces for the two transmission paths from both network planes, it contains message registers, bit and channel timing circuits, parity-checking circuits, and circuits that reformat data.

**NT2X48** — A digital 4-channel dual-tone multifrequency (DTMF) or digitone (DGT) receiver. NT2X48AA = DTMF; NT2X48AB = DGT; NT2X48BB = ESA DGT; NT2X48CA = A-law DTMF receiver (international—Turkey); NT2X48CB = DTMF for British Telecom; NT2X48CC = A-law DTMF for U.K.

**NT2X53** — The trunk module (TM) control card is used in the TM MTM, DRAM, and OAU shelves. This card includes message registers as well as bit and channel timing, parity-checking, and data-reformatting circuit. This circuit includes three controllers that handle trunk, network, and integrity messages, and it generates enabling signals for the 30 individual trunk interfaces.

**NT2X59** — The A-law TM CODEC with BT tones card is used in the TM, MTM, RMM, DRAM, and OAU shelves. The card codes pulse amplitude modulation (PAM) signals into PCM and decodes PCM signals into PAM signals. The card also produces PCM tones for signaling and supervision purposes. The NT2X59EA is the DMS-250 CODEC.

**NT2X70** — A dc-to-dc regulated power converter card. It works from a -48V dc input and supplies voltages of +5V, -5V, +12V, and -12V, each with a common ground. Some features include fixed current limiting, over-voltage/under-voltage shutdown, an interlock (to ensure that 5V is present before +12V) and dc isolation between input and output. An on-off-reset switch (Converter Fail) LED is provided to operate in conjunction with a frame supervisory panel (FSP) power control and alarm circuit.

**CAUTION:** When replacing a NT2X70AF Power Converter, follow the replacement procedures within the NTP.

**NT2X90** — An incoming/outgoing (IC/OG) test trunk card that provides and interface between a TM, MTM, ISM, or RMM and test facilities such as the #14LTD, #3LTD, CALRS, and MLT. It provides access to subscriber lines through the metallic test access (MTA) network and is also used for incoming operator verification. The NT2X90AD version includes all the “AC” version capabilities in addition to “on-hook dc signature,” “bypass initiate signal detector,” and “ring ground signal detector” capabilities.

**NT3X09** — The Metallic Test Access (MTA) card provides 8 by 8 two wire metallic matrix for cross connection between the test equipment, test card, line and line card.

**NT3X17** — This **incoming** crosspoint card, used in the NT0X48 Junctioned Network. The eight outputs from IF-0 and IF-1, each representing 32 channels of serial data, enter the incoming formatter and are converted to 32 sets of parallel data words, 10-bits per word, having 8 words per set.

**NT3X18** — This **outgoing** crosspoint card, used in the NT0X48 J-Net, converts incoming parallel speech and signalling data to serial.

**NT3X19** — This speech interface card, used in the NT0X48 Junctored Network, contains decoders and buffers for the incoming circuits, and buffers and encoders for the outgoing circuits. The decoders can accommodate four 32-channel ports (0-3) of incoming serial PCM at 2.56Mb/s, therefore, for the 64-port NM, 16 speech IF cards are required (designated IF-0 through IF-15).

**NT3X20** — This MD'd test card, used in the NT0X48 J-Net, inserts & detects test codes and provides an active bus termination.

**NT3X21** — This MD'd bus card, used in the NT0X48 Junctored Network, provides an interface/termination for cables from other shelves, and regenerates clock and sync pulses and multiplexes data streams.

**NT3X22AA/AB** — This I/O card, used in the NT0X48 Junctored Network, interfaces the transmission of signaling and control messages to and from the CMC in the CCC or the MS in the DMS-SuperNode, and the two processors in the NMC. The AA card is for the NT40 and the AB for the SuperNode.

**NT3X23AA/AD** — This MD'd processor card, used in the NT0X48 Junctored Network, handles all messages from the CMC or the MS, and is referred to as the C-side processor. The AA card is for the NT40 and the AD for the SuperNode.

**NT3X24** — This MD'd clock card, used in the NT0X48 Junctored Network, provides timing & sync signals to the processor cards.

**NT3X47** — The HDLC message processor, located in the RLM, is the interface between the Master Processor and the message channel to the CC in the host office. In addition, it handles the reception and transmission of PP to PP messages between the RLM and other connected PM via the host office DCM-R. These tasks are performed by a processor section and a controller (HDLC) section. Also included are timing and control circuits which provide synchronization between the RLM circuits (2.56 MHz) and the clock signal extracted from the DS1 links (1.544 MHz).

**NT3X48** — The DS1 interface card is located in the RLM. One or two cards, depending on the number of DS1 or MRLM links required (2 links per card). Each card provides two ports to the DS1 or MRLM links.

**NT3X49** — This is an optional extension memory card for the RLM. It provides extra memory capability for the Master Processor when the ESA option is in use.

**NT3X70** — This crosspoint card, used in the NT5X13 Junctored Network, contains the TS for 512 channels (one quarter) of one side of an NM. Speech data enters the XPT card in parallel format on a 10-bit wide bus carrying 512 channels. Since the format is parallel, the ports are separated in time, not in space. The data on this bus is written into the DM of the first-stage TS. The data in the DM is subsequently distributed to its own second-stage TS and to those on its three mate XPT cards through the inter-switch link buses.

**NT3X71** — This test code card, used in the NT5X13 Junctored Network, interfaces with a network control processor card (NT3X74) to allow the insertion and extraction of test code (TC).

**NT3X72** — This speech interface card, used in the NT5X13 Junctored Network, provides eight bi-directional, 2.56 Mb/s serial port interfaces on shelf 18. Each card interface contains decoders and data alignment buffers for the incoming circuits, and encoders and buffers for the outgoing circuits.

**NT3X73** — This serial-to-parallel (SP) formatter card, used in the NT5X13 Junctored Network, converts the incoming serial data received from the speech interface cards to the parallel format required for the crosspoint cards. The SP formatter consists of four identical sections. Each section is responsible for converting 16 ports (8 pairs) of speech data into a 512-channel, 10-bit parallel bus. Thirty-two (4 sections X 8 pairs) dual-port (1-pair) serial data buses from eight serial interface cards are received by the four SP formatter sections. It outputs four 10-bit parallel buses, one to each of the four crosspoint cards which comprise one side of an NM.

**NT3X74AB** — This SuperNode network control processor card, used in the NT5X13 Junctored Network, handles message transfer between the CC and PM.

**NT3X75AA and AB** — This P-side processor card, used in the NT5X13 Junctored Network, handles message transfer between NM and PM via SP and PS formatters.

**NT3X75BA and BB** — This P-side processor card, used in the NT8X10 Junctored Network, handles message transfer between NM and PM via SP and PS formatters.

**NT3X76AC** — This SuperNode network clock card, used in the NT5X13 Junctored Network, interfaces the transmission of signaling and control messages to and from the computing module in the DMS-SuperNode, and the two processors in the NMC. It also generates a 10.24 Mhz clock pulse and a frame pulse (125us). The clock circuit periodically synchronizes itself with the frame pulse received from the incoming data from the computing module. These clock and frame pulses control timing within the NM and, through the interface cards, to the PM.

**NT3X86** — This parallel-to-serial (PS) card, used in the NT5X13 Junctored Network, converts parallel speech buses from the XPT cards to the

serial format required by the serial port IF cards. The PS formatter consists of four identical sections. Each section is responsible for converting a 512-channel 10-bit parallel bus into sixteen (8-pairs) serial buses. Four parallel buses are received by the PS formatter, one from each of the four XPT cards which comprise one side of an NM. It outputs thirty-two (4 sections x 8 pairs) dual port (1-pair) serial data buses to eight serial IF cards.

**NT4X65** — The trunk module (TM) combination control card combines the functions of the NT0X70 Processor Card, the NT2X45 Interface Card, and the NT2X53 Control Card. It is used in the TM, MTM, and the STM. It provides the high level control within the module. It controls signaling and supervision functions, network messaging to the host DMS, and processing of PCM data. This control card is an interface to analog and digital test trunks, service circuits, and alarm circuits.

**NT4X97 & NT4X98** — The NT4X98 metallic test unit (MTU) is a micro-processor-controlled test unit that is used for line card testing and subscriber loop diagnostics. The MTU consists of two cards: the NT4X97 MTU controller card, and the NT4X98AA MTU analog card. The NT4X98AA contains the measurement test head, and is directly controlled by the NT4X97 by way of a dedicated 22 conductor bus (MTU bus).

**NT6X05** — The NT6X05 Line Drawer provides signalling and voice interfaces between 64 two-wire line cards and the two LCA control complexes. It also controls the application of ringing. Each drawer contains a bus interface card (BIC). NT6X05EA is Line Drawer for 1-Meg Modem LCs.

**NT6X27** — The PCM30 interface card provides an interface between an NT6X02 common peripheral controller (CPC) and European-standard PCM30 trunk transmission equipment. The PCM30 interface card translates PCM voice signals and signaling data between two 32-channel, 2.048-Mbps external PCM 30 trunk circuits and one 64-channel, 5.12-Mbps duplicated port in the CPC.

**Note:** For further information on the following NT6X40 card link and port assignments, see the “XPM PACK RELATIONSHIP DIAGRAM” and the “XPM LINK CONFIGURATION DIAGRAM” within this QRG.

**NT6X40** (see previous note) — The DS30 network interface (NI) card, found in the DTC, LGC, LTC, SMA, SMU, SMR, LTCI/DTCI, TMS, and RCC shelves, is available in two versions: the NT6X40AB (NT6X40AA is MD'd) eight port card and the NT6X40AC 16 port card. The card provides a central-side (C-side) interface for DS30 links to the network. Each port of a DS30 NI card provides a two-way voice and data interface and contains a looparound circuit for fault isolation. **Note:** If equipped with SLC-96 6X85AA CPs, replace the 6X40AA/AB/AC with a 6X40BA in slot 22. If equipped with SLC-966X85AB CPs, then 6X40AA/AB/AC packs can be left in.

**NT6X40BA** — This DS30 network interface (NI) card, found in the C-side of the subscriber carrier module SLC-96 (SMS). The NT6X40BA provides four DS30 ports instead of the 16 provided by two NT6X40AB cards or 16 by one NT6X40AC card.

**NT6X40FA & FB** — Extended network (ENET) XPM DS512 link control card (one per unit/plane).

**NT6X40GA** — DS-512 link paddle board card connects 512 pulse code modulation circuits to ENET by means of a fiber optic cable.

**NT6X41** — The speech bus formatter card, found in the DTC, LGC, LTC, SMA, SMU, SMR, LTCI/DTCI, TMS, and RCC shelves, consists of two sections: the clock section and the formatting section. The clock section generates the 10.24-MHz shelf clock. The formatting section of the card provides parallel-to-serial conversion of the encoded voice signals received from the CSM interface card and destined for the C-side links. It also provides serial-to-parallel conversion of the encoded voice signals received from the C-side interface cards, network plane selection, parity error generation for test purposes, and T1 clock generation.

The NT6X41AB version is for use in Turkey.

**NT6X42** — The CSM card, found in the DTC, LGC, LTC, SMA, SMU, SMR, LTCI/DTCI, TMS, and RCC shelves, performs several functions. It extracts the CSM bit from the C-side channels, assembles the CSM for each channel, and inserts the CSM into the outgoing C-side bytes. The CSM CP also performs parity checking on all incoming bytes, as well as parity generation on all outgoing bytes.

**NT6X43** — The messaging interface card, an older messaging card found in the SMA, SMR, SMU, LTCI/DTCI, TMS, and RCC shelves, provides interface for the parallel speech bus and extracts control messages received on channel zero from the control module (CM).

**NT6X44** — The time switch TS, found in the DTC, LGC, LTC, SMA, SMU, SMR, LTCI/DTCI, TMS, and RCC shelves, card converts between the serial stream that is received from (or transmitted to) the DS30 interface card or DS1 interface card and the parallel stream that is used on the internal speech bus. When controlled by the SP, the TS also associates any of the DS30 interface cards and DS1 interface cards with any of the time slots on the parallel speech bus and transfers data between the associated channel and the time slot. NA6X44AA not acceptable for PCL loads. See the NTAX78 ETS card used for ISDN PRI and Digital Test Access.

**NT6X44EA** — The universal time switch card provides pulse code modu-

lation (PCM) conversions on a per channel basis, allowing compatibility between the North American and international DMS-100 switches. The universal time switch can perform nine different types of PCM conversions from central side (C-side) to peripheral side (P-side) and vice versa. The NT6X44EA can directly replace all current versions of the NT6X44 except the AC and CA versions.

**NT6X45** — Master processor has been replaced has been replaced with the NTMX77 Unified Processor (XPM PLUS).

**NT6X46** — Signalling processor memory has been replaced with the NTMX77 Unified Processor (XPM PLUS).

**NT6X47** — Master processor memory has been replaced with the NTMX77 Unified Processor (XPM PLUS).

**Note:** For further information on the NT6X48 card link and port assignments, see the “XPM PACK RELATIONSHIP DIAGRAM” and the “LTC/LGC shelf” hardware diagram within this QRG.

**NT6X48** (see previous note) — The DS30A interface card, located in the LGC, LTC, LTCI/DTCI, RCC, MSB7, and TPC contains ten separate ports. Each port provides a two-way voice and data interface and carries a 32-channel, 2.56-Mbps bit stream. Each DS30A port contains a loop-around circuit for fault isolation.

**Note:** For further information on the following NT6X50 card DIP switch settings, see the “DIP Switch Settings for the 6X50 & 6X85 DS1” within this QRG.

**NT6X50** (see previous note) — The DS1 card, found in the DTC, LGC, LTC, SMA, SMR, LTCI/DTCI, HIE, TMS, and RCC shelves, contains 2 DS1 ports. One to ten cards provisionable for each LTC module provides 2-way voice and data interface, looparound paths, Xmission of local alms, detection of remote alarms, and detection of error conditions such as loss of synchronization, bipolar errors, and slips. **Note:** It has been reported that 6X50AA cards below release #OU can cause slips. The NT6X50AB card is the DS1 Extended Super Frame (ESF) interface card. The NT6X50BA will be required for ISDN-3 applications. The NT6X50EC is used to provide near-end echo cancellation on one or more DS1 trunks.

**NT6X51** — The line concentrating module (LCM) processor controls the activity of the LCA and functions as the interface between the DS30A links and the digroup controller; preforms sanity checks, collects digits and messaging for up to 640 lines, monitors power and ringing functions, and recovers and generates clock signals. NT6X51AA = 64K Memory  
NT6X51AB/AC = 256K Memory

**NT6X52** — The digroup controller functions as an interface for up to three DS30A links and up to ten LCM drawers; supplies time switching for both external and internal channel assignments and provides the digital loop-around paths used for troubleshooting.

**NT6X53** — This power converter supplies +5V, -5V, +15V, -15V dc; includes relay circuits that apply the ringing, ANI, and coin voltages (which are generated by the ringing generators) to the line cards in the NT6X05 Line Drawers. Each power converter functions as a backup for the converter in the associated LCA.

**NT6X54** — The Bus Interface Card (BIC) is located in the Line Drawer. It provides Ethernet data functions when installed in a Line Drawer with a NTEX54 Data BIC (DBIC)—a subscriber is provided with data at 1 MBPS downstream and 128 Kbit/s upstream with POTS service.

**NT6X60** — This ringing generator contains two cards: the NT6X38 for ringing control and the NT6X37 for ringing amplification. Ringing signals originate in the NT6X38 and are amplified to the required output level by the NT6X37.

**NT6X65** — The CCIS terminal card, located in the MSB6 shelf and ST7G extension shelf, transmits and receives signaling data between a DMS switch and CCIS and CCITT6 transmission links.

**NT6X66** — The CCS7 terminal card, located within the MSB7 and ST7G shelves, transmits and receives signaling data over CCS7 transmission links, implements the CCS7 link protocol, and monitors signaling link performance. The NT6X66CA is a signaling terminal interface circuit pack used for digital private network signaling system (DPNSS) applications. NT6X66BA is used for a NTT-NCCI #7 signalling link.

**NT6X67** — This signalling terminal buffer card, located within the MSB6 and MSB7 shelves, generates and verifies parity on data transmitted between the MSB6 and the ST controller (STC).

**NT6X68** — The signaling terminal interface (STI) card, located within the MSB6, MSB7, and ST7G shelves, provides latches for address, data, and control lines to the STC for fault diagnosis and maintenance. Two STIs are provided for each of the two groups of ST cards. Each group is referred to as a signaling terminal group (STG). See the NT6X68 PEC code list within this QRG.

**NT6X69** — Common peripheral processor messaging protocol and tone card, found in the DTC, LGC, LTC, SMA, SMR, SMU, LTCI/DTCI, MSB7, TMS, and RCC shelves, provides interface for the parallel speech bus and extracts control messages received on channel zero from the control module (CM). See the PEC codes within this QRG for a list of the NT6X69 cards available.

**NT6X70** — The continuity tone detector card detects tones that are used in call processing to verify the continuity of the voice/data path between LTCs. It monitors and records the frequency and level of the tones. The continuity tone detector CP retains this data for use by the XPM processor CP in the LTC.

**NT6X72** — The remote formatter card is located in the RCC shelf. All RCC functional changes in adapting network side communication ports from DS30 to DS1 are made by replacing the NT6X41 speech bus formatter card.

**NT6X73** — The link control card (LCC), located within the RLCM/OPM/SRU Host Interface Equipment (HIE), provides an interface between eight ports from an RLCM LCA shelf and the DS1 links to the host. Also provides an interface between the ESA processor, if provisioned, and the LCM. The NT6X73BA card is the international version for the HIE and acts as the messaging interface and provides data rate conversion between the SCU, RMU, and the PCM30. It also acts as the clock source for the SRU.

**NT6X74** — The control circuit card, located within the RMM/RIM shelves, functions as the link between line control arrays (LCA) of the LCM and test trunks, service circuits, and RMM alarm circuits. It processes DMS-X messages, trunk messages, and PCM data.

**NT6X75** — The optional ESA clock and tone circuit card, located within the RLCM/OPM Host Interface Equipment (HIE) and RIM shelves, generates the clock signal for the LGC/DTC processor and the tones (dial, busy/reorder, receiver off hook, audible ringback, and electronic business set ring-down) needed for ESA operation.

**NT6X78** — The CLASS modem resource card, found in SCMs, provides various residential (RES) enhanced features and can be provisioned in slot 16 of the SMU shelf. The CMR card is required if the calling number delivery (CND) feature is being provisioned.

**NT6X80** — The pad/ring card, found in SCMs, generates ringing frequency instructions using PCM. The frequencies are switched by the TS card onto the DS1 channels which are associated with the subscriber loops that are to be rung.

**NT6X81** — The A/B interface card, found in SCMs, inserts and extracts A and B bits from the PCM stream. These per-channel signaling bits are used for ringing, hook status detection, and, in some instances, ANI and coin functions.

**Note:** For further information on the following NT6X85 card DIP switch settings, see the “DIP Switch Settings for the 6X50 & 6X85 DS1 Cards” within this QRG.

**NT6X85** (see previous note) — The SLC-96 DS1 interface card contains two DS1 ports. One to ten cards are provisionable for each SMS, SMS-R, or SMU module. The DS1 interface card operates in one of two modes: (1) DDL mode and (2) non-DDL mode. Each port provides a two-way voice, data, and signaling interface. The card provides looparound paths for each DS1 port to allow isolation of faults. It also provides transmission of local alarms and the detection of remote alarms as well as detection of error conditions such as loss of synchronization, bipolar error, and slip.

**NT6X86** — The A/B interface card, located in the SCMs, inserts and extracts A and B bits from the PCM stream. These per-channel signaling bits are used for ringing, hook status detection, and, in some instances, ANI and coin functions. NT6X86AB card is required for XPM PLUS upgrades.

**NT6X91** — The NT6X91 provides a mobile telephone exchange link between the CC and the corresponding peripheral unit.

**NT6X92** — The UTR is a 32-channel tone receiver, found in the DTC, LGC, LTC, SMA, SMR, SMU, LTCI/DTCI, MSB7, TMS, and RCC shelves, detects a variety of tones, including dual-tone multifrequency (DTMF) and multifrequency (MF). Tone samples are switched onto the parallel speech bus by the TS and are collected by the UTR at appropriate time slots. The UTR analyzes the samples and identifies tones. Results are sent to the XPM processor. NT6X92EA is the Global Tone Receiver.

**NT7X07** — The Internet Protocol (IP) Gateway (IPGW) card provides the bridge between the TDM(time division multiplex) network and the IP Unified Network. It converts voice data from the IP terminals to TDM voice data for the PSTN. Up to five of these cards can reside on an IP Ready LTCI XPM shelf for a total of 10 cards per two-shelf module. Each module has 480 channels (48 channels per card). See Centrix IP in this QRG.

**NT7X80** — The bus shorter card connects the FP bus, the MP bus, and the SP bus on 3 processor XPMs. The NT7X80AA is inserted in slots 13 and 17 of PDTCS and PLGCs as part of the upgrade to PDTCS+ and PLGC+.

**NT8X12** — This interface card, used in the NT8X10 Junctored Network, provides sixteen bi-directional, 2.56 Mb/s port interfaces for the DS-30 format of NMs or PMs and also provides the serial to parallel and parallel to serial formatter functions for interfacing with the NT8X13 crosspoint card. The card provides sixteen ports and in a set of four provides sixty-four ports per NM. The card also handles the insertion and extraction of test code (TC) from card NT8X14. The TC is inserted only on the port card in the speech channel immediately after the outgoing circuit. When the TC is inserted, the speech bus is disabled for involved port and channel.

**NT8X13** — This crosspoint card, used in the NT8X10 Junctored Network, contains the TS for 2048 input channels and 1024 output channels. Two pairs of cards are required, one pair for switching from the peripheral input channels to the junctor output channels on the A-side, and one pair for switching from the junctor input channels to the peripheral output channels on the B-side.

**NT8X14** — This test code card, used in the NT8X10 Junctored Network, interfaces the NM with the network control processor (NCP) card for the insertion and extraction of test code (TC) and for the testing of the digital pads. The TC is used by the CC or the computing module to check the continuity of a PCM path. If the TC card does not trace the expected test code, the location is read by the NCP and sent to the CC or the computing module. A card list of suspected faulty card(s) is displayed at the MAP.

**NT8X18AA** — DS30A C-side Interface Card, located in the SMS-R shelf, connects to the RSC.

**NT8X99** — The LCME Power converter circuit pack provides +5v dc to the NTB34 and the two NTB35s for its own LCM or the SRU of the SRU, and provides +15v dc to the Line Drawers and has the capability to power the mate LCM/SCU for power redundancy. This pack also contains the Ring, ANI and Coin detector/multiplexer circuit, and in addition, has isolating diodes for serving the Line Drawer voltage needs.

**NT9X10AA** — The 33-MHz 88100 BRISC CPU card, located in the SN Computing Module (CM) Processor shelf and the SNSE CM/SLM shelf, provides a stepped performance increase over the NT9X13 family of processors. This processor card can be replaced card-for-card with the NT9X13 DMS-core processor card, with the exception of a remote terminal interface (RTIF) board. The NT9X10AB BRISC CPU card is currently supported for use in the Series 60 CM. The NT9X10BA BRISC CPU card is currently supported for use in the Series 70 CM. It is based on the Motorola 88110 microprocessor, operated at 60 MHz. The NT9X10BA behaves as both CPU and memory card. It will contain 256Mbyte of general purpose (PS and DS) memory. It is used for Series 70 SN & SNSE applications.

**NT9X12** — The CPU port card, located in the SN Computing Module (CM) Processor, SLM, and the SNSE CM/SLM shelves, provides a high-bandwidth communications link between the CPU and message switch. The transport mediums can be either a DS512 fiber optic link, with a 40.96 Mbps capacity or DS30 transmission link, with a 2.084 Mbps capacity. A standard configuration consists of four port cards per system, with each half of the processor having two port cards in the card slots immediately adjacent to each processor. The NT9X12AC supersedes the NT9X12AB CPU port card. It adds parity and fault isolation capabilities to the transmit and receive buffers located on the card.

**NT9X13BB** — This DMS SuperNode processor card, located in the Computing Module (CM) Processor shelf, is a high-performance microcomputer board based on the Motorola MC68020 32-bit microprocessor. The NT9X13BC uses the E87 version of the 68020 rather than A70, and it uses the H42 version of the memory access unit. See the NT9X13MA card.

**NT9X13CA** — This CPU circuit card is a high-performance microcomputer board based on the Motorola MC68020 32-bit microprocessor. Its primary application is in signaling transfer point (STP) and enhanced network (ENET). It has the potential for other applications that are based on Supernode hardware.

**NT9X13DA/DB** — This CPU 20-MHz processor card, primarily located within the Message Switch (MS), is a high-performance microcomputer board based on the Motorola MC68020 32-bit microprocessor. It is intended for general purpose applications as well as special purpose applications such as the DMS SuperNode.

**NT9X13DC** — This CPU 20-MHz processor card is a high-performance microcomputer board based on the Motorola MC68020 32-bit microprocessor. It uses all 4 Mbytes of available memory.

**NT9X13DD and DG** — This CPU 20-MHz processor card performs special applications in the junctor network (JNET), enhanced network (ENET), single shelf link peripheral processor (SS LPP), and link interface module (LIM). The NT9X13DG is an upgrade.

**NT9X13FA** — This CPU 20-MHz processor card, located in the ENET shelf, is a high-performance microcomputer board based on the Motorola MC68020 32-bit microprocessor.

**NT9X13GA** — The DMS-core 33-MHz 68030 HPM-based CPU card high-performance module (HPM)-based CPU card that provides a real-time performance gain while supporting software compatibility. The processor card allows a direct card-for-card replacement with the NT9X13 DMS-core processor card.

**NT9X13HB** — The CPU (68030) 40-MHz processor card provides a real-time performance gain while supporting software compatibility. The processor card allows a direct card-for-card replacement with the existing NT9X13 DMS-core processor card.

**NT9X13KA** — This 20-MHz MC68020 CPU card, located in the ENET shelf, is a high-performance microcomputer card that is based on the Motorola MC68020 32-bit microprocessor.

**NT9X13LA** — The AP/FP 68030 HPM-based CPU card provides the processing capability for the application processor (AP) or the file processor (FP). The capability to run foreign (not switch) operating systems is provided by the 68030 CPU on the card.

**NT9X13MA or MB** — These 20-MHz 68020 CPU SuperNode SE core CM processor cards are high-performance microcomputer boards based on a 68020 32-bit microprocessor. The NT9X13MA and MB is a recycled board based on the NT9X13BC.

**NT9X13NA and NB** — The 16-MHz MC68020 CPU card, located on the SNSE message switch (MS) shelf. The NT9X13NA card is similar to the NT9X13Dx-series cards that are used for SN applications. It has 16 Mbyte of DRAM and is used for SNSE applications. The NT9X13NB is an upgrade from the NT9X13NA.

**NT9X13PA** — A SNSE ENET processor pack that is based upon the NT9X13FA ENET processor but has specific SNSE firmware added.

**NT9X14BB** — This 6-Mbyte memory board equipped with error checking and correction (ECC). It can be functionally divided into three separate 2-Mbyte memory modules. Each memory module is organized as a 2X40 array of 256X1 dynamic RAM (DRAM). Modules are further subdivided into banks of 1X40 DRAMs. The 40-bit memory width is composed of 32 data bits, 7 check bits, and 1 parity bit. The NT9X14BB supports all types of memory access. The synchronous memory bus should be used to access the memory, while the asynchronous peripheral bus should be used to read the (ID) PROM and to access the status registers. This board is not compatible with the address-bus (A-bus). The NT9X14DB is a 24-Mbyte memory card and the NT9X14EA is a 96-Mbyte card.

**NT9X15AA** — The mapper card is part of the message switch. The mapper circuit card changes addresses on the transaction bus (T-bus) from the logical node ID used by the software to the physical address used by the routing hardware.

**NT9X17AA** — This is a message switch four-port card that provides a data path for messaging between the message switch (MS) and four external links. It transfers messages between four links and the transaction bus (T-bus). The T-bus is a packet switch that can connect the links to any port on the MS, or to the message switch processor (MSP). The links can be one of two physical types: DS30 or DS512, and one of four logical types: DS30, DMSX, DMSY, or Framet. The NT9X17AA can also, through its on-card maintenance unit (CMU), be used to report the status of the links and link data transfers to the MSP. The NT9X17AC provides a data path for messaging between the message switch (MS) and four subrate (SR512) optical links. It is paired with the NT9X62BA paddle board to interface with the fiber link interface unit shelf (FLIS). The NT9X17BB = 32-port card; NT9X17CA = 128-port card; and the NT9X17DA = 64-port card.

**NT9X19AA & BA** — The AA is a circuit pack filler and the BA is a paddle board filler pack.

**NT9X20AA** — The DS512 paddle board is the fiber interface paddle board used for messaging links between the computing module (CM) and message switch (MS). The card interface on the backplane side is a shorting bus (S-bus), running at an average rate of no more than 4.088 Mwords per second.

**NT9X20BB** — The DS512 interface CM-MS EN-MS paddle board is a DMS-bus fiber interface paddle board used for messaging links between DMS-bus and the enhanced network (ENET). The card interface on the backplane side is a shorting bus (S-bus), running at an average rate of no more than 4.088 Mwords per second.

**NT9X21AA or AB** — The CM-bus terminator paddle board contains element identification (ID) PROM.

**NT9X22AA or CA** — The CM subsystem clock paddle board is used in the computing module (CM) of the DMS-core.

**NT9X23AA or BA** — The DS30 4-port paddle board provides an interface between a parallel 4.096-MHz backplane data bus and the twisted-pair transmission cables associated with four DS30 links. Secondary functions include transmitting out-of-band (OOB) data, receiving OOB, and providing a reference frame pulse extracted from the link. It is used in conjunction with the NT9X17 MS 4-port.

**NT9X25AA or BA** — The MS port expander paddle board connects the S-bus of slot N to the S-bus of slot N+1, with an NT9X25BA (MS port expander/terminator paddle board) terminating the chain. The NT9X25AA is used between an NT9X20BB and an NT9X25BA in the S-bus daisy chain. The NT9X25BA and NT9X25AA allows up to four NT9X17CAs to share a single NT9X20BB. The NT9X25BA is the final paddle board in the daisy chain, connecting the S-bus of slot N to the S-bus of slot N+1. NT9X25BA also contains an identification (ID) PROM so that the system can identify the card.

**NT9X26AA/AB or CA** — The remote terminal interface (RTIF) card monitors and controls the DMS-100 SuperNode. It operates in a monitoring mode when the SuperNode equipment is functioning properly. When the equipment fails, a technician uses the remote system to restore service. The remote system connects to the master DMS-Core, which reboots the DMS-bus.

**NT9X26DA, DB, or DC** — This reduced instruction set computer (BRISC) remote terminal interface (RTIF) paddle board incorporates the features of all existing RTIF cards. It also provides CPU firmware (CPUFW) PROM residence for the NT9X10AA and the NT9X13MA CPU cards. This card provides a reset system for monitoring and controlling the subsystems of the DMS-100 SuperNode and related subsystems. The NT9X26DC is available to support mixed memory configuration available in NA004.

**NT9X26EA** — A BRISC RTIF paddle board that contains firmware to support the NT9X10AB BRISC CPU card on Series 60 SN and SNSE switches or the NT9X10BA BRISC CPU card on Series 70 SN and SNSE switches.

**NT9X27AA & BA** — The CM bus extender paddle board extends the peripheral bus (P-bus) from the NT9X06AA (computing module (CM) processor shelf), used for housing CPU and memory, to the NT9X07AA (CM extension shelf), used for housing the system load unit (SLU). An NT9X27BA card (CM extension shelf bus extender) installed in the extension shelf receives the signals from the NT9X27AA and buffers them onto the extension shelf backplane. Two NT9X27AAs are required on a CM processor shelf for each installed extension shelf.

**NT9X30AA** — This is a dc-to-dc +5V 86-A power converter.

**NT9X30AB** — A global dc-to-dc +5V 86-A power converter.

**NT9X31AA** — This is a dc-to-dc -5V 20-A power converter.

**NT9X31AB** — A global dc-to-dc -5V 20-A power converter.

**NT9X32** — The DMS-bus load paddle board, located in the SN message switch shelf, is designed for the DMS-bus environment. The card ensures a consistent load distribution on the main clock and frame pulse signals driving the shelf, independent of card population or shelf type (master or extension). This results in a significant improvement in signal edge integrity, noise margin, and duty cycle on these key signals.

**NT9X35BA or CA** — The Enhanced Network (ENET) 128K crosspoint card performs the nonblocking switching function.

**NT9X36BA** — The ENET message clock card provides two DS512 message links between the ENET shelf processor and the message switch. It also provides the clocks and timing signals required by the shelf. The card and its associated paddle board NT9X40BA (ENET+ quad fiber paddle board) provide two DS512 communication links between the ENET shelf and the duplicated message switches (one link per plane).

**NT9X40BA** — The ENET+ quad fiber paddle board is used to receive, transmit, and repeat four DS512 fiber links.

**NT9X40BB** is an enhanced version of the BA card and utilizes the latest version of the DS512 treatment receiver controller (DTRC).

**NT9X40DA** — This ENET paddle board uses four hard-clad silica (HCS) fibers operating at 650 nm wavelength to provide 2048 channels to the ENET XPT cards. The SPM IF to ENET uses this card.

**NT9X41BA** — The 16-port DS30 paddle board links DS30 peripherals to the enhanced network through twisted-pair copper cables.

**NT9X44AD** — This is the SLM III Unit (CM load greater than 350 MB). The SLM-III's 1-gig drive, which replaces the SLM II 600-megabyte disk drive, NT9X44AB which is MD'd. The NT9X44AC 1A SLM is also MD. The NT9X44AA, AB, and AC SLM are at end-of-life (EOL) on 5/02.

**NT9X45BA** — This three-DS512 link and 16-DS30 port paddle board, located within the SNSE ENET shelf, is a combination ENET paddle board equivalent to three quarters of the functionality of NT9X40BA, plus the full capacity of NT9X41BA.

**NT9X46AA** — This parallel computing module (CM) port interface paddle board operates as a pair with one paddle board mounted behind an NT9X12 CPU port card and the other mounted behind an NT9X4402 system load module (SLM) controller. An interconnect cable joins the two paddle boards.

**NT9X47AA** — This +12V power converter provides power to the NT9X44 system load module (SLM). The card interfaces with DMS-100 alarm circuits using the NT9X03 frame supervisory panel (FSP). The NT9X47AB is the 60V input global version.

**NT9X49BA** — This message switch (MS) transaction bus (T-bus) terminator card's primary function is to provide bus termination on the T-bus. The NT9X49BA also houses T-bus shelf arbitration logic and a set of buffers for the system clocks.

**NT9X49CA** — This SuperNode message switch (MS) processor-bus (P-bus) terminator circuit card provides termination for MS backplane tracks used by the message switch processor (MSP). It also provides an interface to the P-bus extender paddle board (PB) (NT9X48AA) and a time-out on the MS transaction bus (T-bus).

**NT9X49CB** — This is a logic analyzer that traces transaction bus (T-bus) messages. It is configured by the SN message switch processor. It also serves as a T-bus activity monitor with programmable threshold detection, and as a processor bus (P-bus) terminator, performing the same functions as NT9X49CA (MS P-bus term.).

**NT9X49CC** — This message switch (MS) processor-bus (P-bus) terminator card, located only in the combined MS of the SNSE, provides termination for message switch backplane tracks primarily used by the message switch processor (MSP). This pack provides a time-out on the MS transaction bus (T-bus). The time-out on the MS T-bus is longer for the NT9X49CC than for the NT9X49CA.

**NT9X52AA** — This message switch processor (MSP) transaction bus (T-bus) access card, located within the SN and SNSE MS shelves, provides the IF between MSP and T-bus within the MSP.

**NT9X53AA/AB or AD** — This SN message switch system clock card generates accurate timing signals from two digital phase-locked loops (DPLL) that use Stratum 3 oscillators. The NT9X53AC and AD cards are combined clock cards.

**NT9X54AA** — This DMS-bus clock interface paddle board provides ext. cable connections for the NT9X53AA card (MS clock).

**NT9X54AC** — This external clock interface paddle board provides the appropriate interfaces to convert remote and external analog reference signals to transistor-transistor logic (TTL) levels acceptable by the system clock circuit card. NT9X54AD is Japan version.

**NT9X62AA** — This two-port substrate DS512 paddle board provides the appropriate interfaces to convert remote and external analog reference signals to transistor-transistor logic (TTL) levels acceptable by the system clock circuit card. The NT9X62BA is the four-port version and the NT9X62CA is the SR-512 version.

**NT9X63AA or BA** — This OC-3 interface paddle board is used to connect the CMIC links (OC-3) between MS & XA-core NTLX05 CMIC packet.

**NT9X69AA** — The NT9X69AA is a 16 port DS30 link interface paddle board, which provides DS30 links between the message switch and the existing DS30-based junctor networks (JNET). It interfaces to the NT9X17DA or CA to provide a high-density DS30 interface capability when retrofitting JNETs with enhanced network (ENET) in large offices.

**NT9X73AA or BA** — This local message switch (LMS) to F-bus rate adapter (RA) card is used in a link interface module (LIM) to transfer packets from the 32-bit LMS transaction bus (T-Bus) to the 8-bit frame transport bus (F-bus) and from the 8-bit F-bus to the 32-bit LMS T-bus. All link interface units (LIU7) sit on the F-bus, which is duplicated for reliability.

**NT9X74AA** — The Frame transport bus (F-bus) repeater card, located within the LIU7 shelves, reclocks and repeats all F-bus correspondence between the intershelf F-bus and the intrashelf F-bus. The NT9X74BA version of the repeater card is similar to the AA version with the exception that the far-end F-bus terminations have been removed and placed on the NTEX20AA and BA. The NT9X74CA version of the repeater card is similar to the BA version with the added firmware function of querying the identification (ID) PROM of the NTEX20AA and BA. The NT9X74DA supersedes the NT9X74CA by adding channel bus (C-bus) terminations for link peripheral processor (LPP) channel access.

**NT9X75AA** — This processor bus (P-bus) to frame transport bus (F-bus) interface (PFI) card is a component of the signal transfer point (STP) link interface unit (LIU7). It provides an interface between P-bus & both instances of the F-bus (F-bus A & F-bus B).

**NT9X76AA or BA** — The signaling terminal (ST) card, located within the link interface shelf, is a single board with two processors that handle the data link level functions of the CCS7 protocol. The signaling transfer point (STP) connects to each CCS7 link through an ST card. The NT9X76CA is for the Japanese market.

**NT9X77AA** — The NT9X77AA paddle board, like the following NT9X78 PB, provides the electrical interface between the LIU and the CCS7 signaling link (SL).

**NT9X78AA thru DA** — These DS-0A interface paddle boards are contained in the link interface unit (LIU7) of the link interface modules of the signaling transfer point (STP) switch or the SNSE ENET shelves when equipped with LIUs. The DS-0 interface provides layer-1 functions such as level shifting drivers/receivers between the signaling terminal (ST) and a digital line.

**NT9X79AA or BA** — NT9X79AA is a frame transport bus (F-bus) extension paddle board. Both are located behind the NT9X74 (F-bus repeater card) in the top and middle link interface shelves (LIS) of the link interface module (LIM). The NT9X79BA is located behind the NT9X73AA (rate adaptor) in the LMS shelf.

**NT9X84** — The ethernet interface card provides temporary storage for incoming/outgoing (I/O) link messages and protocol management and handshaking for Ethernet CSMA/CD. It generates proper voltage and impedance levels to drive standard twisted pair drop cable signal lines.

**NT9X85AA or BA** — The attachment unit interface (AUI) PB is a 15-pin D-type connector that provides the interface between the Ethernet controller and the media access unit (MAU). This is the most generic interface and supported as an industry standard (IEEE 802.3 10Base5 implementation).

**Note:** This interface is compatible with all implementations of Ethernet through external equipment. The unshielded twisted pair BA version contains a UTP MAU and hub integrated onto the paddle board. The card pro-

vides a 4-wire twisted-pair connection externally.

**NT9X86** — The dual-port message controller, with a link paddle board, provides two serial message communications links to the DMS-bus from a computing module, an applications processor module, or a file processor module. It provides up to two high-bandwidth communications links to the DMS-bus through the message switch and a local time-of-day (TOD) clock for applications running in a computing module environment, a file processor, or an applications processor

**NT9X87** — This dual-access buffer memory card located within the file processor (FP) shelf provides a large random-access dual-ported buffer memory. This memory is used when passing commands to the controllers, and to hold the data going to and coming from the disk.

**NT9X88** — The SCSI interface processor (SIP) paddle board is an integral part of the file processor (FP) disk and tape drive interface. It provides a standard small computer system interface (SCSI) port to connect to disk and tape mass storage devices.

**NT9X89** — The FP accesses mass storage devices using a small computer systems interface (SCSI) bus. The NT9X89AA is an interface between these storage devices and the SCSI bus.

**NT9X90** — The storage device assembly is located in the file processor (FP) storage device shelf. The NT9X90AA is the hard disk 600 Mbyte device version, the NT9X90AB the 2.1 Gbyte disk version, and the NT9X90BA is the 1.2 Gbyte device version.

**NT9X91** — This power converter provides regulated and protected output of +5 V and +12 V to storage devices on SuperNode shelves.

**NT9X96** — The link interface shelf (LIS) frame transport bus (F-bus) controller card, NT9X96AA, in conjunction with a NT9X98AA paddle board (LIS fiber interface), allows the LIS to connect directly to the DMS-bus by means of a fiber cable.

**NT9X98** — The link interface shelf (LIS) fiber interface paddle board provides a direct link by a fiber cable between the link interface shelf and the DMS-bus.

## Office Hardware Inventory Package (OHIP) Table

(NTP 297-YYYY-350, *Translations Guide*)

Two tables within the switch—OHIP and OHIPBULK—can be used to keep track of all the in-service and spare hardware inventory (including HOST and REMOTES). Table OHIP can be used to keep track of all the in-service and spare hardware inventory, except line cards, while table OHIPBULK keeps track of all the spare circuit packs and all the line cards on a quantity basis. Tables OHIP and OHIPBULK are interdependent.

The initial and ongoing datafill of tables OHIP and OHIPBULK is the responsibility of the operating company.

## Ringling Generators

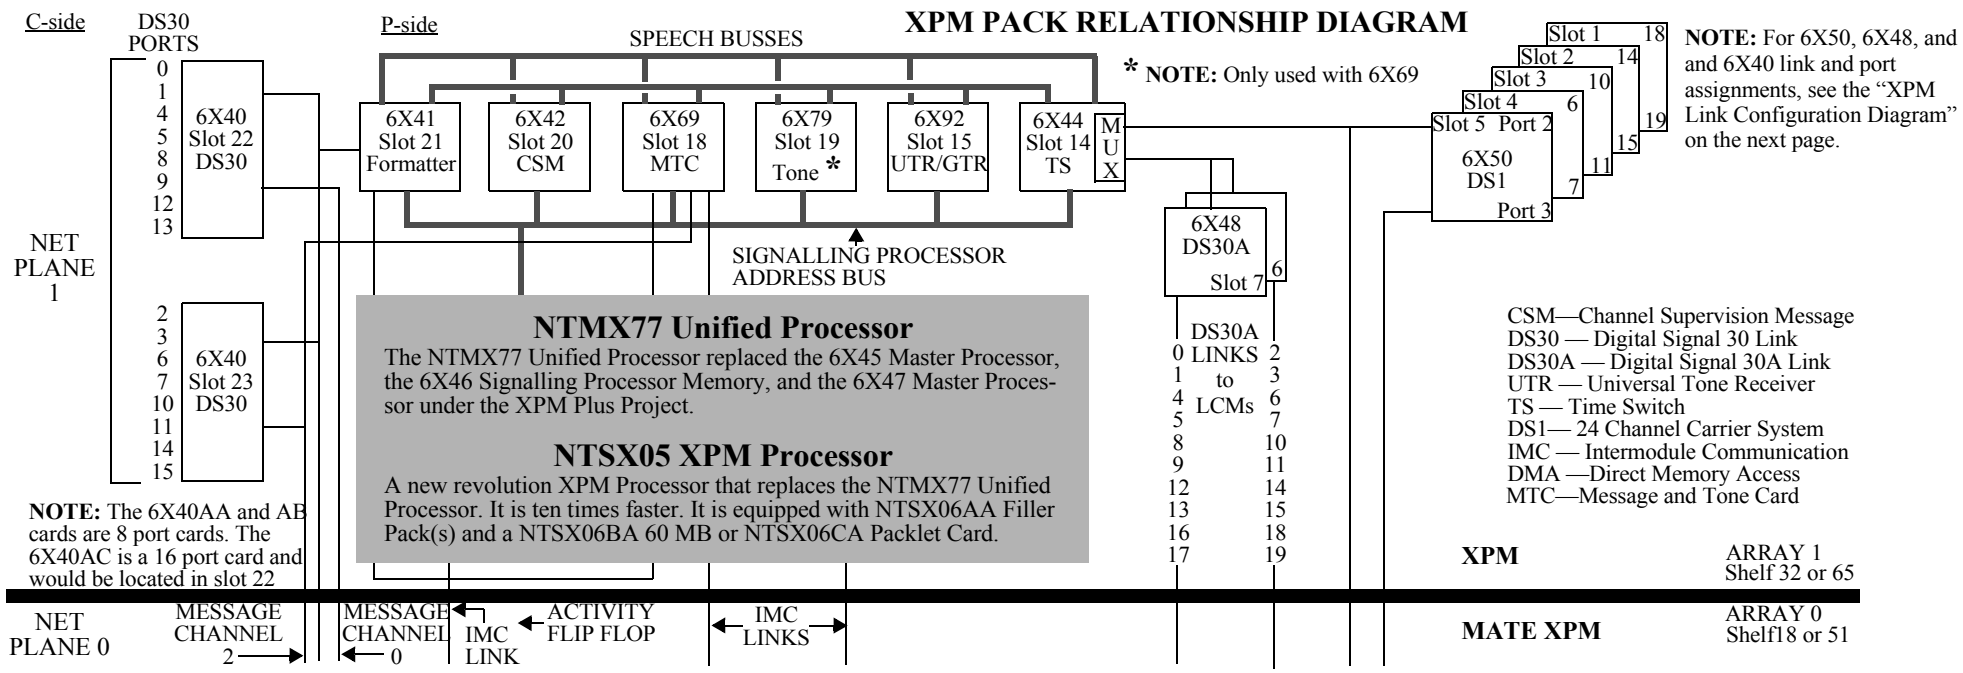

The following ringling generators contain two cards: the 6X38 Ringling Control Card and the 6X37 Ringling Amplifier card:

<b>6X30AA</b> — Ringling Generator	<b>6X30BA</b> — Japanese market
<b>6X30CA</b> — Ringling Generator	<b>6X30BB</b> — Japanese market
<b>6X30AE</b> — Australian market	<b>6X30DA</b> — DMS-10 in China and the Australian DMS-100 market

The following ringling generators contain a single card providing the same functions of the 6X38 and 6X37 as was required with the generators above:

<b>6X30DB</b> — DMS-10 in China and the Australian DMS-100 market
<b>6X30EA</b> — Australia (Small Remote Unit)
<b>6X30AB or FA</b> — United Kingdom (U.K.)
<b>6X30GA</b> — U.K. (SRU)
<b>6X30HA</b> — U.S. & Canada
<b>6X30JA</b> — Japan

**Note:** For information about setting DIP switches, tolerances for ringling, and ANI and coin voltages, see the NT6X30 Ringling Generators in NTP 297-8991-805, *Hardware Description Manuals*. Also, see NTP 297-1001-131, *Ringling System Description and Installation* documentation (Method 2231 within Module 22).

**NOTE:** The 6X40AA and AB cards are 8 port cards. The 6X40AC is a 16 port card and would be located in slot 22

## XPM Link Configuration

**Note:** See the “XPM PACK RELATIONSHIP DIAGRAM” on the previous page for another view of the XPM.

## DIP Switch Settings for 6X50 and 6X85 DS1 Cards

(NTP 297-8991-505 & NTP 297-YYYY-847)

The following equalization/build-out DIP switch settings are for 6X50AA & AB DS1 packs located in the DTC/LGC frames, and 6X85AA & AB DS1 packs located in the SMS/SMU/SMS-R frames. It is important that the DIP switch settings are set properly to prevent SLIPs on the P-side of the carrier system. This can cause customer complaints about problems with FAXing and errors with data transmission, as well as noise if the slips are excessive.

**Note:** It is important to know the card type (AA, AB etc.), release number on the card, and gauge and length of the DS1 cable from the equipment bay (DTC/LGC etc.) to DSX bay before making any settings.

**Note:** S1& S2 or S320 & S620 are banks of DIP switches for the even and odd links/ports and are different depending upon the card type.

**Note:** NTMX81 DS1 Interface Card DIP Switch Settings and the Star Hub Backplane DIP Switch Settings can be found with the Star Remote within this QRG.

6X50AA Cards	
S1 = Even & S2 = Odd Link/Port	
000-300 ft.	Sw 2 & 4 = "On"
301-450 ft.	Sw 3, 6, & 8 = "On"
451-750 ft.	Sw 1, 5, & 7 = "On"

6X50AB Rel 39 and Lower		6X50AB Rel 40 through 59	
S1 = Even & S2 = Odd Link/Port		S1 = Even & S2 = Odd Link/Port	
000-300 ft.	Sw 1 = "On"	000-300 ft.	Sw 4 = "On"
301-450 ft.	Sw 2, 5, & 7 = "On"	301-450 ft.	Sw 3, 6, & 8 = "On"
451-750 ft.	Sw 3, 6, & 8 = "On"	451-750 ft.	Sw 1, 5, & 7 = "On"

6X50AB Rel 60 & Higher "22" AWG (Gauge) DS1 Cable		6X50AB Rel 60 & Higher "24" AWG (Gauge) DS1 Cable	
S1 = Odd & S2 = Even Link/Port		S1 = Odd & S2 = Even Link/Port	
000-133 ft.	Sw 1 = "On"	000-88.6 ft.	Sw 1 = "On"
134-266 ft.	Sw 2 & 3 = "On"	88.7-180.5 ft.	Sw 2 & 3 = "On"
267-399 ft.	Sw 2 = "On"	180.6-269 ft.	Sw 2 = "On"
400-533 ft.	Sw 3 = "On"	270-361 ft.	Sw 3 = "On"
534-655 ft.	All switches to "Off"	362-449.5 ft.	All switches to "Off"

**Note:** EMI = Electromagnetic Interference Protection

6X85AA Cards <i>Without</i> "EMI" Protection			
S1 Bank = Even Link/Port 0		S2 Bank = Odd Link/Port 1	
000-300 ft.	Sw 4 = "On"	000-300 ft.	Sw 1 = "On"
301-452 ft.	Sw 2, 6, & 8 = "On"	301-452 ft.	Sw 2, 5, & 8 = "On"

453-655 ft.	Sw 1, 5, & 7 = "On"	326-450 ft.	Sw 1, 5, & 7 = "On"

## DIP Switch Settings for 6X21AD Line Card

(NTP 297-8991-805, Hardware Description Manual)

**Note:** DIP switch settings for the card are dependent on the customer equipment, distance from the office, and cable characteristics

**Note:** Default setting from the factory are S1 **OFF**, S3 **ON**, S3 & S4 **OFF**. Relationship of this setting is for a Nortel UDLC line that is Non-loaded, and has a signaling level required for a .14 peak to peak voltage (Vpp) setting.

APPL Item #	D/A Voice (S1)		Balance (S2)		Signaling Level (S3)			
	ON	OFF	ON	OFF	Both ON	Only S4 ON	Only S3 ON	Both OFF
	0 dB	-3.5 dB	NL	9+2	1.3Vpp	.8Vpp	.6Vpp	.14Vpp
*1	X		X		X			
*2	X		X			X		
*3		X		X			X	
*4		X		X				X
*5		X	X					X
*6	X			X			X	
*7		X	X		X			

- \*1 MSB phone sets with long loops (21-24 dB estimated measured loss (EML))
- \*2 MSB phone sets with medium loops (17-21 dB EML)
- \*3 MSB phone sets with medium loops (4-17 db EML)
- \*4 MSB phone sets with short loops (0-4 dB EML)
- \*5 Nortel Networks universal digital loop carriers (UDLCs)
- \*6 Other vendor UDLCs
- \*7 NT6X21AC equivalent settings

**Note:** The NT8X10 is a dual shelf network (DSN) equipped with two networks per frame. The DSN was MD'd in 1998

**Note:** For further description of the following DSN packs, see the “Circuit Pack Description” within this ORG or see NTP 297-8991-805.

		Line Card	Ring Code	Line Card	Ring Code	Line Card	Ring Code
1FR	B or D	A	0	A	0	A	0
2FR	D	A**	0	A	0	B	1 - 5
2FR	B	—	—	—	—	A* or B	1 - 5
4FR	D	B	1 - 4	B	1 - 4	B	1 - 5
4FR	B	B	1 - 4	—	—	A* or B	1 - 5
8FR	D	B	1 - 5	B	1 - 4	B	1 - 5
10FR	D	B	1 - 5	—	—	—	—

\* — Type A line card is recommended for these applications.

\*\* — Type A line card cannot be used for 2FR divided ringing when CC patch TLA67 is used (in LCMs).

## Table LMRNG

This table contains ringing data for LM and RLM. A description of the fields in table LMRNG as well as a sample of datafill for table LMRNG can be found in NTP 297-YYYY-350, *Translation Guides* and Installation documentation (Methods 2231 & 4165 within Module 22 “Preparation and Power-up”).

<b>0X70</b> — Processor	<b>2X53</b> — Control
<b>2X06</b> — Power Converter	<b>2X59</b> — CODEC
<b>2X09</b> — Power Converter	<b>2X70</b> — Power Converter
<b>2X45</b> — MTM Interface	<b>4X65</b> — Control

### Examples of Optional Maintenance Cards

- 1X00** — 102 Milliwatt Test Trunk; **1X00AE** — International Version  
**1X31** — Conference Circuit  
**1X80** — EDRAM (post as DTM at PM MAP level) (see note below)  
**1X80** — International EDRAM (post as DTM at PM level of MAP)  
**Note:** The 1X80 is a digital trunk module (DTM) with its own ports to the network. The power comes from the host MTM.  
**Note:** See NTP 297-1001-527 for the following EDRAM procedures:
- Recording custom announcements on EDRAM
  - Reloading factory-produced voice files to EDRAM
  - Uploading EDRAM files to a storage device
  - Reloading custom announcements to EDRAM
- 1X81** — Compact Conference  
**1X90** — TTT Test Signal Generator  
**2X11** — LTU Digital Card  
**2X43** — Office Alarm Circuit #3  
**2X48AB** — Digital 4-channel DGT Receiver (2X48BB for ESA Digitone)  
**2X50** — Horizontal/Vertical TAN Driver  
**2X66** — CAMA Suspension and Calls Waiting Loop or E&M  
**2X71** — Transmission Terminating Trunk  
**2X96** — TTT PCM Level Meter (Level & Frequency)  
**3X09** — Remote Metallic Test  
**5X30** — 101 Communication Test Line Circuit

### TOPS Digital Modem located within slots 5 thru 16

- 3X02** — Even MTM slot: Digital Signal Processor  
**3X03** — Odd MTM slot: Control Processor (stand-alone)

<b>6X50</b> — DS1 Interface	

### RMM Optional Cards

- 2X90** — Test Trunk Card (VER90, NOTEST, REPAIR, MONTALK)  
**2X10** — MTU Analog (Odd slot)  
**2X11** — MTU Digital (Next adjacent slot)  
**2X48** — Digitone Receiver (2X48BB for ESA Digitone calls)  
**3X09** — Remote Metallic Test Access  
**0X10** — Scan Card  
**2X57** — Signalling Distribution (SD) Card

Integrated Services Module (ISM) shelf (NTFX4101)

The ISM is a single shelf unit that replaces the existing TM or MTM shelves. The ISM shelf is mounted on either the cabinetized ISM (CISM), the frame ISM (ISME), the cabinetized metallic test access (CMTA), or the metallic test access equipment (MTAE).

**Note:** There are 90 or more optional service circuits. See the PLN-8991-103, *Engineering Manuals* (No longer provided) for slot assignments and other provisioning information. Also, see the ISM NTFX44/NT2X90 assignment information below.

**Note:** For further description of the following ISM packs, see the “Circuit Pack Description” within this QRG or see NTP 297-8991-805.

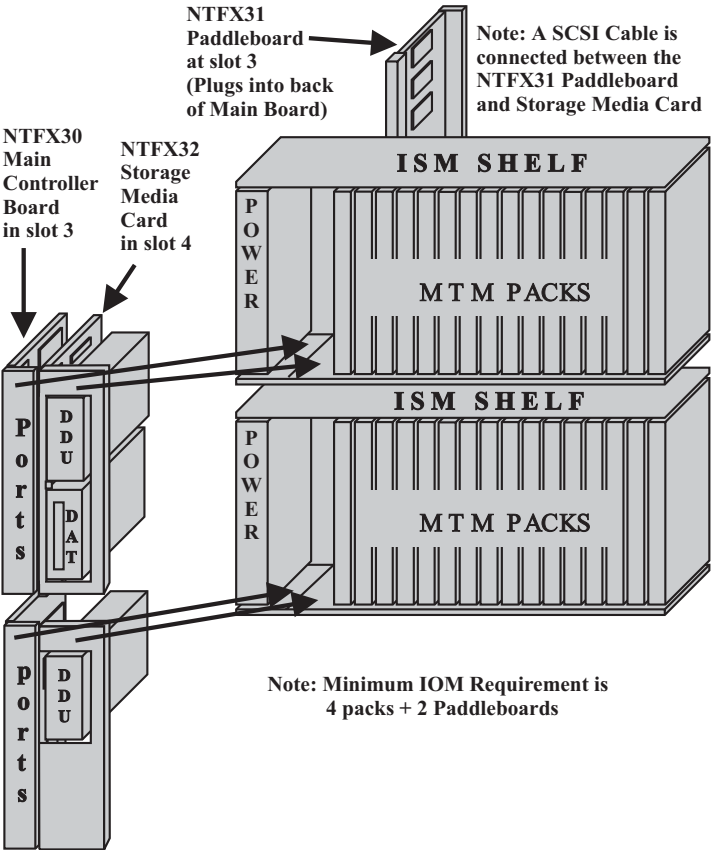

NTFX42 — ISM Processor Card                      NTFX43 — ISM DC Converter

Input Output Module (IOM) (Located in ISM shelf)

(NTP 297-1001-591, *Input/Output Devices Maintenance Manual*)

The input/output module (IOM) is a direct replacement for the IOC shelf. The IOM provides all the functionality of the current IOC cards, with the exception of the NT6X91. The IOM with a digital audio tape (DAT) and a disk drive unit (DDU) replaces the IOC DDU and magnetic tape drive (MTD). The IOM occupies 3 shelf slots within the ISM shelf. If a DAT is not required, the IOM controller cards provide 9-track MTD support.

- NTFX30 — IOM Controller Card (located in slot 3 of the ISM shelf)
- NTFX31 — IOM Paddle Board (located in slot 3 in the back of ISM shelf)
- NTFX32 — IOM Storage Media Card (located in slot 4 of the ISM shelf)
- NTFX32BA — DDU Plug-in Unit
- NTFX32CA — DAT Plug-in Unit
- NTFX32DA — Storage Media Filler Plug-in Unit

(PLN-8991-103, Vol 1, Engineering Manual (No longer provided))

STM-0												STM-1																				

The STM accepts analog trunks, digital service circuits, or both, and processes the signals to a common Pulse Code Modulation (PCM) format. The NT1X58 version of the STM shelf is divided into two STM modules, each module being a separate STM. Slots 01-11 contain STM-0 (max. 7 test or service cards), and slots 12-22 contain STM-1 (max. 6 test or service cards). The NT7X30 version of the STM also contains two STM modules. Slots 01-08 contain STM-0 (max. 5 test or service circuits) and slot 09-22 contain STM-1 (max. 6 test or service circuits).

**Note:** For a chart showing service circuit slot assignments for the NT1X58 STM, see NTP 297-8991-805 (search on NT1X58 for CD-ROM).

- 4X65** — Combination STM Control

### Optional Service Circuit Card Examples

- 1X00AB** — 102 Milliwatt Test Trunk or Receiver-Off-Hook Tone
- 1X31AA** — 3-port Conference Circuit
- 1X75BA** — DRAM Controller card
- 1X76AA** — DRAM Programmable Read-Only Memory card
- 1X77AA** — DRAM Random Access Memory cards
- 1X79AA** — DRAM Electronically erasable read-only memory cards
- 1X81AA** — Conference Trunk Module (CTM) (Compact Conference)
  - The NT1X81AA CTM is a stand-alone peripheral module (PM), that offers the same functionality as a fully equipped conference shelf. See NTP 297-1001-530, *Conference Circuit Guide* for more details.
- 1X90AA** — TTT Test Signal Generator
- 2X47AD** — Transmission Test Unit (TTU) control and signal generator
- 2X48AB** — Digital 4-channel DGT or MF Receiver
- 2X56AB** — TTU Digital Filter
- 2X75AA** — Looparound Test Line
- 3X02AA** — TOPS Control Processor
- 3X03AA** — TOPS Digital Signal Processor
- 3X67AA** — North American Six-port Conference Circuit
- 3X67BB** — International Six-port Conference Circuit
- 3X68(XX)** — Tone Generator (PRMT/PST/CONF)
- 5X29AA** — Digital Tone Detector and Sender

**1X76BG** — Auxiliary Operator Services System (French)  
**1X76BH** — Auxiliary Calling Card Services System (French)  
**1X77A** — 128K RAM card (for on-site announcement recordings)  
**1X79AA** — EEPROM card (for on-site announcement recordings)

<u>Commands</u>	<u>Description</u>
> <b>DRAMREC</b>	accesses the DRAM recording utility subcommands
> <b>QUIT</b>	exits the DRAM recording utility
> <b>ABORT</b>	cancels the previous command
> <b>ASSIGN</b>	datafill the memory management tables for PROMS with SIT and speech data, but for RAMS with SIT data only
> <b>ASSIGNDUMP</b> <function> { <b>COMMANDS</b> , <b>ANNS</b> }	
> <b>COMMANDS</b>	creates a file containing all of the ASSIGN commands used in assigning DRAM phrases
> <b>ANNS</b>	displays the valid DRAM phrases
> <b>CONNECT</b>	connects a specified trunk to a DRAM for recording
> <b>DISCONNECT</b>	disconnects a previously connected trunk from DRAM
> <b>DISPLAY</b>	displays the phrase contents of speech memory
> <b>ERASE</b>	erases the given phrase from speech mem on DRAM
> <b>FIND</b>	lists all occurrences of a phrase name on all DRAMs
> <b>POSITION</b>	record a phrase at a given position in memory
> <b>PLAYBACK</b>	repeatedly plays back the desired phrase
> <b>RECORD</b>	define and record a phrase. Do not use optional parameters for normal recording
> <b>SITLOAD</b>	puts special info. tones in RAM
> <b>DEBUG</b> <table> <dr <del>am</del> /ann>	displays the contents of DRAM tables
> <b>ANNSDEBUG</b>	prints contents of internal ANNS tables (could be large!)

## Expanded Subscriber Carrier Module-100 Access 2 (SMA2)

The SMA2 provides a multi-vendor interface for up to 28 DS1 ports for one remote digital terminal (RDT), and up to 48 DS1 links for each SMA2.

### SMA2 Main shelf

### Small Remote Unit (SRU) (NT8X95) (MD)

The international small remote unit (SRU) is a DMS-100 remote peripheral module (PM) that provides access for a maximum of 240 subscriber lines. It is located at a remote site up to 240 km (150 miles) from the host DMS-100. The SRU communicates with the host DMS-100 through pulse code modulation 30 (PCM30) links and provides a variety of services, including plain ordinary telephone service (POTS) and Centrex.

**Notes:** For further description of the following SRU packs, see the “Circuit Pack Description” within this QRG or see NTP 297-8361-550, *Outside Plant Module Maintenance Manual* or the NTP 297-8991-104 *Provisioning Manuals*.

**Note:** For further description of the following Star Remote Hub Control shelf packs, see NTP 297-8353-550, Star Remote System Maintenance Manual.

- 6X53** — Power Converter supply +5 and +15V
- TR60** — Ringing Generators
- TR73** — Universal Maintenance Pack (UMP)
- TR77** — Remote Controller Pack (RCP)
- MX81** — DS1 Carrier Interface Packlet (Resides in TR87 pack)
- MX83** — Filler Pack for open MX81 packlet slots
- TR87** — Quad Carrier DS1 Pack (Supports up to 4 TR81 packlets)

### NTMX81 DS1 Interface Card DIP Switch Settings

Feet	Meters	S3/6	S2/5	S1/4
0-133	0-41	ON	OFF	OFF
133-266	41-81	OFF	ON	ON
266-399	81-122	OFF	ON	OFF
399-533	122-163	OFF	OFF	ON
533-655	163-200	OFF	OFF	OFF
<b>Note:</b> S = switch numbers. On S1 DIP switch (6 positions): S1-S3 belong to even port and S4-S6 belong to odd port.				

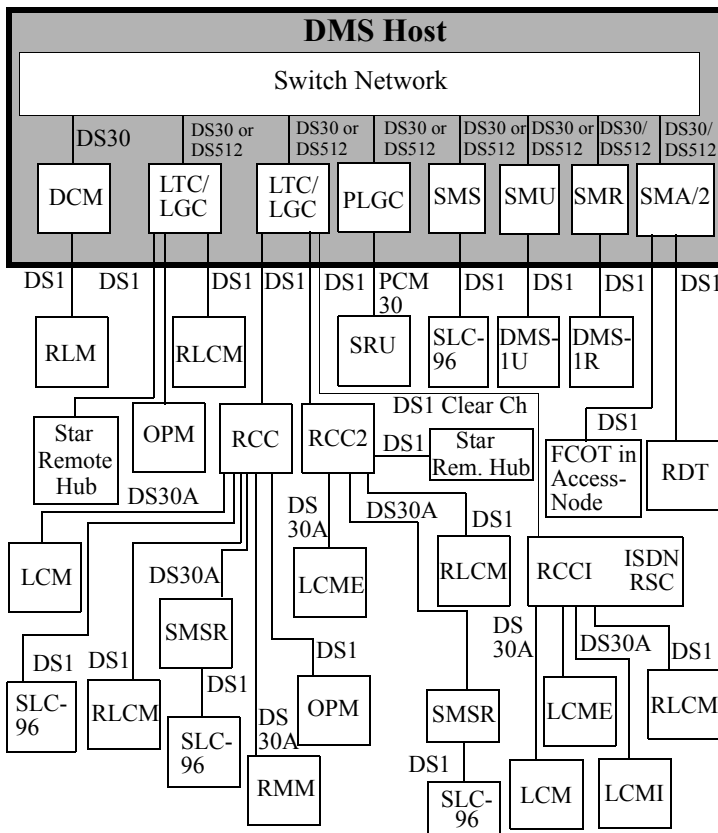

**Note:** Two dual inline package (DIP) switches are on the backplane of the Star Hub in slot positions slot 4 and 19. The position of these DIP switches determine the protocol used by the Star Hub. The following table identifies the backplane DIP switch settings for the ESF B8ZS protocol that is needed to support ISDN 64Kb/s clear channel.

### Star Hub Backplane DIP Switch Settings

Backplane DIP Switch Settings							
Configuration	Code	1	2	3	4	5	6
DS1 extended superframe (ESF) binary eight bit zero substitution (B8ZS) code suppression	ESF B8ZS	Off	Off	Off	On	On	On

## Remotes Quick Reference

**Note:** The following block diagram is not an all inclusive view of the many possible remote applications. For more information, see the references listed below. Some remotes are now MD.

- Notes:**
1. The remotes supported by the DMS-100 are generally connected via DS1 facilities up to 200 miles (100 mi. for the OPM/RLCM) from the CO. Except for the pair-gain remotes that are connected directly to the CO, most remotes support intraswitching and the emergency stand-alone (ESA) mode.
  2. The RCC and SMSR or RCC2 and SMSR are Remote Switching Centers (RSCs). RCCI is an RSC with ISDN services.
  3. See the RCCMAP command under "DMS Commands."

### Types of DMS-100 Remotes

- Subscriber Carrier Module SLC-96 (SMS\_SLC-96)
- Remote Concentrating SLC-96 (RCS)
- Subscriber Carrier Module Urban/DMS-1U (SMU\_DMS-1U)
- Subscriber Carrier Module Rural/DMS-1R (SMR\_DMS-1R)
- Subscriber Carrier Module Access (SMA)
- Fiber Central Office Terminal (FCOT)
- Remote Digital Terminal (RDT)
- Subscriber Module SLC-96 Remote (SMS-R)
- Remote Line Concentrating Module (RLCM)
- Outside Plant Module (OPM)
- Remote Line Module (RLM)
- Small Remote Unit (SRU) (MD)
- Remote Switching Center (RSC) (RCC + SMSR = RSC)
- Remote Switching Center - SONET (RSC-S) (RCC2 for RSC-S)
- Remote Switching Center - SONET Extended Distance Capability (RSC-S EDC)
- Remote Switching Center - SONET NI-1 (RSC-S NI-1)
- Star Remote System (**Note:** Star Module is MD; Start Hub is GA)

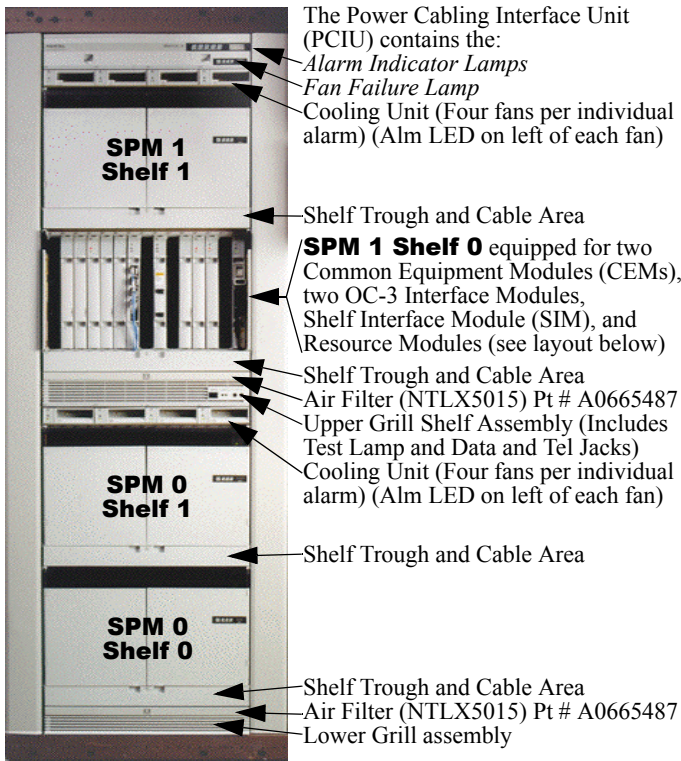

### Remotes Maintenance and Product Guide References

Air Filter Tray (NTLX5016) & Air Filter (NTLX5015)														

DMS-SPM Module continue on the next page.

**Note:** **9X40DA** ENET Paddle Board connects to front of CEMs.

**Note:** SPM Module with two shelves can provide up to 26 Resource Modules (RM) in addition to the required CEM and SIM circuit packs.

**Note:** Each serial link (SL) has 256 time slots. Where 3 SLs are assigned, there are 768 timeslots that can service the bandwidth equivalent to one STS-1 or DS-3 Resource Module. **Note: Serial links in diagram above are shown as 1-S, 3-S, and 9-S.**

**Note:** Slots 1 & 2 and 9 & 10 of shelf 0 have 9 S-links or 2304 timeslots that supports OC-3 or ATM RMs to provide 2016 circuits.

**Note:** Prior to SP14, if you plan on implementing ISUP trunking, you must have LIU7s datafilled and configured for external routing (See NTP 297-8991-030, LIU7 Ext. Routing Activation User Guide)

**Note:** For further description of the following SPM shelf packs, see “Circuit Pack Description” within this QRG or see NTP 297-1771-550.

**LX57** — PCIU Card

**LX56** — Fan Unit Card

**LX58** — Alarm Card

**LX59** — Fan Management Unit

**LX60** — Filler

**LX5015** - Air Filter (#0665487)

**LX5016** - Air Filter Tray

**LX61** — Shelf Interface Module (SIM) (Power Distribution & Alarms) is located in slot 15 of each shelf.

**LX82** — Enhanced Common Equipment Module (CEM) with Ethernet is located in slots 7 and 8 of the bottom shelf. The LX82 CEMs are required for Crossover Messaging functionality and Succession Evolution of SPMs. See “Verifying Crossover Messaging” on the next page. **Note:** Use PRSM command ISTBAUDIT to confirm CEM patches. ex:

>ISTBAUDIT <spm #><cem #>

## Resource Modules and Provisioning Information

**Important Note:** Only one type of ECAN RM can co-exist in the same SPM. You cannot mix LX66 with LX85 or LX86 RMs. You also cannot mix LX85 and LX86 RMs within the same SPM.

**LX44** — Sync Resource Module for Building Int. Timing Source (BITS)

**LX65** — Digital Signal Processor (DSP) (Resources - MF, COT, ABBIT, TONESYN) A DSP has 9 Islands. **Note:** You can mix LX65AA and LX65BA DSPs in the same SPM.

**LX66** — Voice Signal Processor (VSP) (Echo Cancelling (ECAN)). A VSP has 10 Islands & 26 ECANs per Island, for 260 ECANs per VSP max. **Note:** LX65 DSP and LX66 VSP packs go in slots 3 thru 6 & 11 thru 14 of the bottom shelf and/or slots 3 thru 6 and 9 thru 14 of the top shelf (Need 3 S-links per shelf)

**LX71** — OC-3 Interface Module (OC-3 Xmit & Rec. for Act/Prot) for TDM (traditional trunking) packs go in slots 9 & 10 of bottom shelf.

**LX72** — Data Link Controller (DLC) packs for supporting ISDN PRI ‘D’ Channel should go in slots 1, 2, 7 and 8 of the top shelf since they only need 1 S-link per slot. **Note:** DLCs can go in other than slots with 1 S-link but it would be wasting S-links.

**LX73** — Asynchronous Transfer Mode (ATM) Interface Module packs go in bottom shelf slots 1 & 2 for the “MG4K” (MG4000) SPM configuration, and 9 & 10 of the bottom shelf for the IW SPM (The ATM pack needs 9 S-links per slot)

**LX74** — Synchronous Transport Signal-level one (STS-1) Interface Mod

**LX84AA** — PCM30 Low Speed Access (LSA)

**LX84DA** — DS1 LSA

**LX85** — Voice Signal Processor (VSP) (i.e. echo cancellation)(MD)

**LX86** — Voice Signal Processor (VSP) (i.e. echo cancellation)

**LX99** — Synchronous Transfer Mode 1 (STM-1) Interface Module

## Determining SPM Trunk Terminal & Node Numbers

**Note:** Unless you know the SPM and the circuit numbers, locate it in table TRKMEM.

TRKMEM Ex: SRMPODNWD0 255 0 SPM 1 98 5

**Note:** In this example for trunk 255 in the SRMPODNWD0 trunk group, 98 is the ckt # (span #) and 5 is the circuit (channel #) in SPM 1.

**Note:** Terminal Number (TN) = (Span X 24) + Channel (Channel = 1-24)

**Note:** SPM ckt #'s start at 95 which is span 0; therefore, circuit 98 in this example would be span 3. Since we now know the span is 3 and the channel is 5, we can figure the terminal number. Terminal Number is: (3 X 24 + 5) = 77

**Note:** To get node number (NODENO), you can use XPMIST. Ex: >XPMIST;NODENO SPM 1

**Note:** Another way to get an SPM trunk TN and NODENO is to go into toss-up and turn PMIST on. Once in PMIST, use the command >CONVERT TRK SRMPODNWD0 255. The output will be in HEX so convert to decimal if needed

**SPM Quick References continue on the next page.**

### DSP Island (DSPI) Resource Provisioning

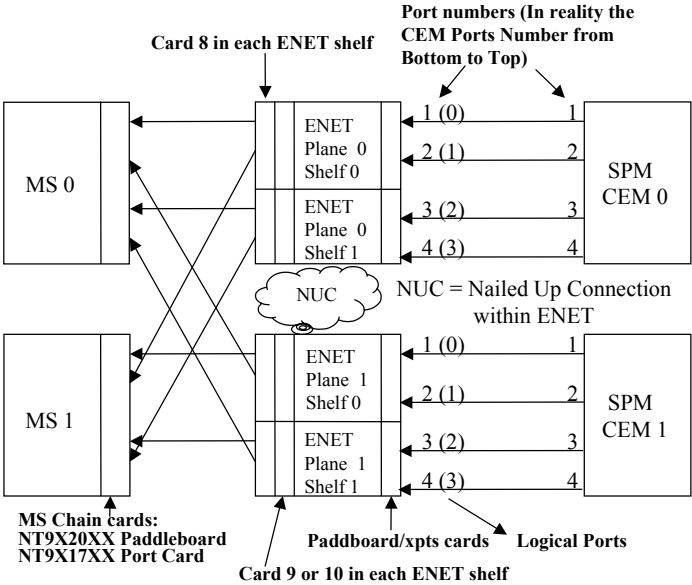

**Note:** Each DSP RM provides a total of 9 DSP Islands (DSPIs). The resources should be allocated across the RMs so that the DSP messaging load is evenly distributed. Only one type of resource can be provisioned per DSPI. The following table defines the capacity number for each resource:

*	**	Notes and Descriptions
COT	80	COT = Continuity tone transceiver.
Tone-Syn	255	It is <u>not recommended</u> to have more than 14 ABBIT resources (one ABBIT DSPI) on an RM that also has 255 ToneSyn (Tone Synthesizers) resources allocated on it, since both of these resources are messaging intensive.
DTMF	64	DTMF = DigiTone/Multi-Frequency receiver with dial
ABBIT	14	It is <u>not recommended</u> to have more than 28 ABBIT (AB Bit) resources (two ABBIT DSPIs) on the same RM.
MF	40	MF = Multi-Frequency receiver

\* Resources column

\*\* Each of the values in this capacity column is equal to one DSPI.

### SPM to ENET Connectivity Diagram

**Note:** Each SPM CEM card has 4 DS512 ports which are cabled via fiber straight from the front of the CEM cards to ENET planes using NT9X40DA Paddleboards; then from the ENET via existing DS512 fibers to the MS.

### Verifying Crossover Messaging

Enter the SPMXMSG level at the CI: level of the MAP

>SPMXMSG

>DISPLAY

Example of response:

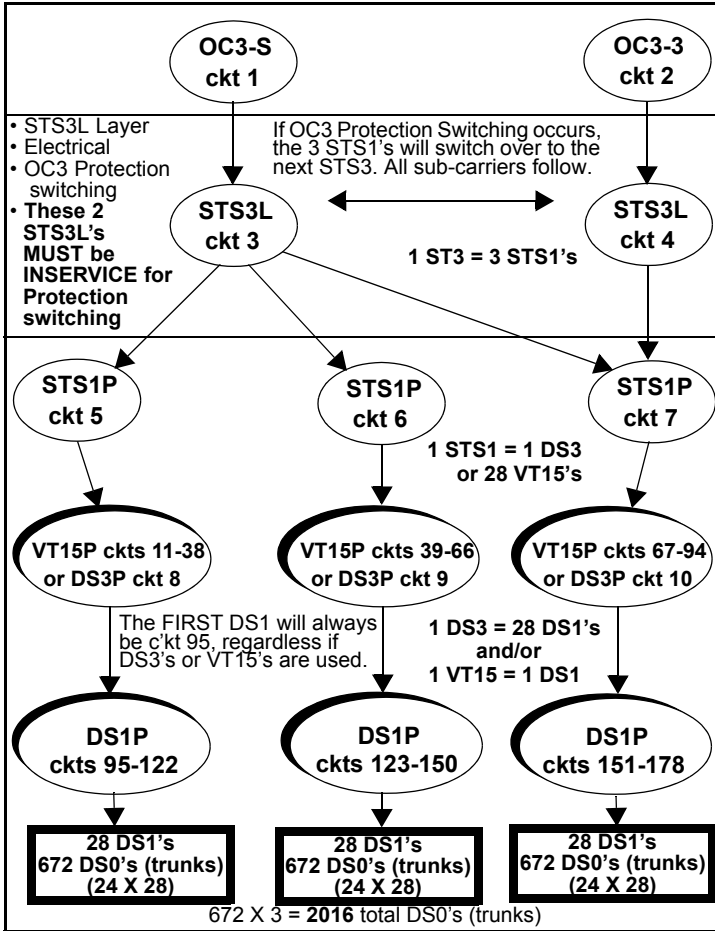

SPM_NO	XOVER_MSG	CEM0	CEM1
0	N	NTLX63AA	NTLX63AA
1	N	NTLX63AA	NTLX63AA
2	Y	NTLX82xx	NTLX82xx
3	Y	NTLX82xx	NTLX82xx

**Note:** SPM(s) with NTLX82(s) must have XOVER\_MSG field set to “Y”. Contact your Nortel Regional Customer Service Representative if Crossover criteria is met and Crossover has not been activated. Reference DMS-100 Technical Bulletin 20010043.

SPM Quick References continue on the next page.

# Table MNHSCARR (Mgmnt Network High Speed Carrier)

(NTP 297-YYYY-351, Customer Data Schema Reference Manual)

## DS1P Line Encoding Parms in Table MNHSCARR

FRAMEFMT	DS1ZCS	Equivalent To
ESF	OFF	B8ZS / 64kbs
ESF	ON	Does not exist
SF	OFF	B8ZS / 56kbs
SF	ON	AMI / 56kbs

**Note:** The DS1ZCS parameter is available in NA011 and above. The DS1ZCS must match the far-end MUX.

## SPM Primary Rate Interface (PRI)

PRI on SPM is available as of NA012/SP12. PRI on SPM requires 2 DLC (NTLX72xx) RMs. They provide 1 + 1 redundancy and are suggested to be assigned in slots 1, 2, 7, or 8 of SPM Shelf 1 to avoid wasting S-links.

**Note:** Use PRSM command ISTBAUDIT to confirm DLC patches. ex: >ISTBAUDIT <spm #><dlc #>

### SPM PRI Trunk Tables Datafill Sequence and Notes

Datafill in the following sequence for PRI on SPM: CLLI, TRKGRP, MNPRIID, TRKSGRP, TRKMEM, LTDFEF, LTMAP, LTCALLS.

**Note:** In table TRKSGRP, the CRLLENGTH field should always be set to 2 for SPM PRI. The IFCLSSS field must be the opposite of the far-end CPE and is generally set for NETWORK in the DMS-100.

**Note:** Table MNPRIID maps the SPM and circuit number to the Interface Identifier used by the PRI circuit (DS1). Use the following conventions and ensure they correspond to the same value in the CPE provisioned spans:

Primary D-Channel = IID 0  
 Backup D-Channel = IID 1  
 24 B-Channel Span = IID ≥ 2

**Note:** In table LTDEF, the VARIANT must match the far-end CPE or problems may be experienced. The PROFNAME should be set to NIL, unless connecting to Meridian-1 CPE for which the PROFNAME should be set to SLIPROFL. The Profile Name is defined in table PRIPROF.

**Notes continue on the next page.**

**Note:** Even though some changes to tables MNPRIID and TRKSGRP are allowed while LTID is mapped in table LTMAP. To help prevent possible corruption, perform the following steps to complete PRI datafill:

1. BSY;BSY INB the D-Channel and B-Channels of the trunk.
2. Remove the associated LTID tiple from table LTMAP.
3. Make the desired table changes.
4. Add the associated LTID tiple back into table LTMAP.
5. BSY;RTS the D-Channel and B-Channels of the trunk.

### SPM Trunk Provisioning Limits for pre-SP16

**Note:** The limits will be removed in the SP16 release, which will allow any combination of trunk types up to the full SPM port capacity.

Trunk Combination	ISUP T1s	PTS T1s	PRI T1s	Notes
ISUP	84	-	-	Full Capacity
PTS	-	56	-	Up to 56 PTS with the remaining T1s unused
PRI 23B + D	-	-	84	Full Capacity
ISUP/PTS	84-59	0-25	-	Up to 25 PTS with the remaining T1s ISUP
ISUP/PRI	84-0	-	0-84	Any combination of ISUP and PRI to equal 84 T1s
PTS/PRI	-	0-16	84-68	Up to 16 PTS with the remaining T1s PRI
ISUP/PTS/PRI	84-32	0-20	0-32	Up to 20 PTS and up to 32 PRI with the remaining ISUP
ISUP/PTS/PRI	84-0	0-16	0-84	Up to 16 PTS with any combination of ISUP and PRI

### SPM EXEC TAB lineup

The following is the basic execs datafill to allow PTS and PRI functionality. Datafilled in table MNNODE.

Appl:	DMS 100:	DMS 250:	DMS 500:
PTS:	ABTRK SPME X	AB250 SPM250 ABSPMX PXSPMX** AB250 PXDTCX ***	AB250 SPM250 ABTRK SPME X ABSPMX PXSPMX** AB250 PXDTCX ***
PRI:	PRAB SPME X	PRAB SPM250*	PRAB500 SPM250 *

\* The PRAB500 SPM250 exec is not available until SP15. Prior to SP15, you cannot have PRA (DMS100/200) and PRA250 (DMS250/500) PRI on the same physical SPM. Until the PRAB500 SPM250 exec is available, you must have the PRI trunks designated for either PRA (DMS100/200) or PRA250 (DMS250/500) and use the PRAB SPME X (for PRA) or the PRAB SPM250 (for PRA250) applications. (This means in DMS500 offices the PRI trunks have to physically be in a SPM that is designated via the execs for the DMS100 or either the DMS250 side - at least until SP15 and the PRAB500 SPM250 exec is available anyway...)

\*\* ABSPMX PXSPMX is not fully functional until SP16. (Even though it can be datafilled prior to SP16.) ABSPMX PXSPMX allows PX trunks that use FX signaling. This lineup also allows DAL and PX FX trunks to function on the same SPM.

\*\*\* AB250 PXDTCX is used for PX trunks with FX signaling pre-SP16. Remember: DAL and PX FX cannot be placed on the same SPM prior to SP16.

#### Example exec lineups in table MNNODE for DMS250/500:

**Pre-SP16:** (If you have standard PTS and nothing else, use: (ABTRK SPME X) (AB250 SPM250) (If you have standard PTS and PRI for DMS250, use: (ABTRK SPME X) (AB250 SPM250) (PRAB SPM250) (If you have standard PTS and PRI for DMS100 in a DMS500 office, use: (ABTRK SPME X) (AB250 SPM250) (PRAB SPME X) (If you have standard PTS, PX FX without any DAL trunks on this SPM, and PRI for DMS250, use: (ABTRK SPME X) (AB250 SPM250) (AB250 PXDTCX) (PRAB SPM250) (If you have standard PTS, PX FX without any DAL trunks on this SPM, and PRI for DMS100 in a DMS500 office, use: (ABTRK SPME X) (AB250 SPM250) (AB250 PXDTCX) (PRAB SPME X)

**SP16 and above:** (The following execs should handle about ANY configuration...but see below if placing both DAL and PX FX trunks on same SPM...) (ABTRK SPME X) (AB250 SPM250) (ABSPX PXSPMX) (PRAB500 SPM250)

#### Example exec lineups in table MNNODE for DMS100 offices:

**Pre and post SP16:** (This is all you need to cover standard PTS and PRI...) (ABTRK SPME X) (PRAB SPME X)

## DAL prefix on the same SPM

**Note:** To allow DAL and PX FX trunks to function on the same SPM, the following must be performed:

### Reference:

- PLN-8021-004 DMS-100F North American DMS-100 Release Doc. Volume 1 of 2
- LET0014 Preliminary 12.02 October 2000  
Pages 161 - 168, inclusive; Page 165 - 166, excerpt

### 7.6 Upgrade Procedure (Paraphrased and edited for clarity...)

This feature requires a special upgrade procedure to properly activate its functionality without causing a loss of service in an active switch. Activating the office parm for this feature without following the upgrade procedure below may cause loss of service in live switches. The following steps are necessary for this procedure:

1. SPMs must be at least SP16 load.
2. The core must be at least LLT00014 and have patch PJL26BHZ applied. (For LLT00015, core patch PJL26BHL)

**Note:** The office parm DAL\_pxfx\_on\_same\_spm SHOULD NOT be activated at this time.

3. Table MNNODE accessed and ABSPX PXSPMX added to each tuple in the EXECTAB optional field for each SPM that DAL and PX FX on same SPM is desired. (**NOTE:** ANY SPMs that currently have FX trunks on them will also have to have ABSPX PXSPMX added as an EXECTAB. Once the core parm DAL\_pxfx\_on\_same\_spm is activated, ABSPX PXSPMX will be the only exec being used for this functionality, regardless of if DAL is also on the SPM.)

4. All SPMs on the switch that were affected by the MNNODE changes in step 3 must be BSY/RTS'd to allow the new termtype and its corresponding execs (ABSPX PXSPMX) to be downloaded to all the SPMs.

**Note:** The BSY/RTS'ing a SPM as mentioned here consists of the following steps:

- i. BSY the inactive CEM.
- ii. RTS the inactive CEM.
- iii. Perform a SPM SWACT.
- iv. BSY the newly inactive CEM (was the active)
- v. RTS the newly inactive CEM

**Note** You will also be prompted by the DMS to perform this when adding the new termtype and execs in step 3.

5. The office parm DAL\_pxfx\_on\_same\_spm for this feature is now activated on the CM. To allow all PX FX trunks to be recognized as the new termtype, all SPMs on the switch affected by the MNNODE changes in step 3 must be BSY/RTS'd again, as in step 4 above. This is necessary for the smooth transition of PX FX trunks from the AB250 termtype to the new termtype ABSPX without causing call outages.

## SPM Table References

Several tables have been added for configuring SPMs. Except for the need to datafill table TRKMEM after SPM table MNHSCARR, and table TRKSGRP after SPM table MNRIID for PRI, datafill the existing tables CLLI, PECINV, CLLIMITCE, PMLOAD, and TRKGRP for trunking, and table ENCDINV for hooking it up to the ENET, the following new SPM tables must be datafilled in the following order: MNPRTGRP, MNNODE, MNSHELF, MNCKTPAK, MNLINK, MNHSCARR, MNATMCON, MNPRIID, SPMECAN, FEATCNTL.

## SPM OM References

For SPM OM support, reference the following OM Groups: DSPRMAN, ECANRMAN, MNTCNODE, MNTCTYPE, MNTCUNIT, MNTCLINK.

**SPM Quick References continue on the next page.**

## SPM Log References

Use SPM logs SPM300 thru SPM710 and other related logs: SPRF670 - 671; CARR300, 310, 500, 510, 511, 512, 800, 810, 811; ENET211, 308, 311; PRSM400.

## SPM Alarms

- Note:** If your office is pre-NA011 and you have a non-node visible alarm, (such as a PROTFAIL), you must use logutil and/or dlog/scanlog to locate an SPM331 log indicating the source of the alarm. The only way to clear a “Non-Node Visual” SPM alarm is to perform a successful Protection Switch of the RM causing the alarm.
- Note:** In NA011 and above offices you can list all SPMs with alarms, INCLUDING the ones caused by protection switching alarms by entering **>MAPCI NODISP;MTC;MTC;POST SPM ALL** and then enter **>QUERYPM FLT ALL**.
- Note:** Tables MNPRTGRP, MNCKTPAK, MNNODE, and MNH-SCARR, contain alarm datafill.

## LED Alarm Indicators

**Note:** For a detailed description of the alarm LED indicators for the frame and RMs, see NTP 297-1771-550, *SPM Hardware Maintenance Reference Manual*.

The following table provides a quick reference for RM LED status and what their indication means.

LED Status		Indication and Action
Green Off	Red Off	Green LEDs are in sleep mode (module can also be not powered or not seated). When all LEDs are off, there are no critical faults and an indicator test is not underway. Use an indicator test to check LED function. Also, see note below
Green On	Red On	A power on self test (POST) or an LED indicator test is underway. During a POST, the LEDs are controlled by the initial boot loader (IBL) software. If both LEDs remain on for an extended period after a POST, the module is defective. For detailed instructions for replacement, see the appropriate
Green On	Red Off	Normal operation—there are no critical faults and no action is required. Do not remove a module displaying this alarm indication or combination.
Green Off	Red On	Critical fault—replace the module. For detailed instructions for replacement, see the appropriate NTP for <i>Card Replacement Procedures</i> .
Amber Off		Normal operation—all external signal inputs to the module faceplate are valid.
Amber On		At least one external signal source entering the module faceplate is not carrying a valid signal.

**Note:** To prolong LED life, program the green LEDs so it can enter the sleep mode. LED sleep-mode timing is controlled by the entry in field LEDTIMER in data schema table MNNODE. Sleep mode does not apply to red LEDs.

## PREPDATAChNG Command

Prior to BAS18 core offices, in order to perform SPM resource manipulation in table MNCKTPAK, the craft person needed to have an understanding of the concept of "Roving Spare Strategy", and may have to perform several sparing actions (prot switches) in order to align the RMID and PROTWHOMID and change the RM's Resource Datafill properly.

In BAS18 and above, the PREPDATAChNG command will reduce the complexity/difficulty of provisioning, configuring, and changing the Resource Datafill on RMs. The user will only need to issue a command (PrepDataChng) to align the RMID and PROTWHOMID of the RM in context. Depending on the result of this command, the customer will be notified if they can proceed to change the RM datafill and finally RTS the RM.

To invoke this command:

```
>mapci;mtc;pm;post spm <#> ; select <DSP or VSP to be modified in MNCKTPAK>
>PrepDataChng
```

**Note:** For further description of the following LCM and LCME Line Concentrating Array (LCA) packs, see the “Circuit Pack Description” within this ORG or see NTP 297-8991-805.

**\*\*Note:** The NTEX54 DBIC card replaces the NT6X54 BIC when 1-Meg Modem service is implemented. The NTEX54BAAB, BAAC, and BAAD cards are for Phase 2B. (see NTP 297-8063-200, *1-Meg Modem Service Implementation Guide*).

**The following are examples of assignable cards within a Line Drawer:**

<b>NT6X17AA</b>	— Standard Line Card Type A (MD'd)
<b>NT6X17AB</b>	— Standard Line Card Type A (MD'd)
<b>NT6X17AC/BA</b>	— World Line Card Type A
<b>NT6X18AA</b>	— Standard Line Card Type B without +48V
<b>NT6X18AB</b>	— Standard Line Card Type B with +48V
<b>NT6X18BA</b>	— World Line Card Type B
<b>NT6X19AA</b>	— Messaging Waiting Card Type E
<b>NT6X20AA</b>	— Message Waiting Converter
<b>NT6X21AA</b>	— EBS P-phone Line Card Type C
<b>NT6X21AD</b>	— EBS P-phone Line Card

**Note:** See “DIP Switch Settings for the NT6X21AD Card” within this QRG or go to NTP 297-8991-805, *Hardware Reference Manual*

- NT6X23AA** — Power Converter (+48)
- NTBX26AA** — ISDN S/T Line Card
- NTBX27AA** — 2B1Q U-interface ISDN Line Card
- NT6X71AA/AB** — Standard Data Line Card Type D
- NT6X76AA** — Asynchronous Interface Line Card
- NT6X99AA** — IBERT (2-slot) Card
- \*NTEX17CA** — Hi density 2-slot xDSL 1-Meg Modem line card
- \*NTEX17DA** — DA card for RLCM/STAR; use with NTEX54CA DBIC card

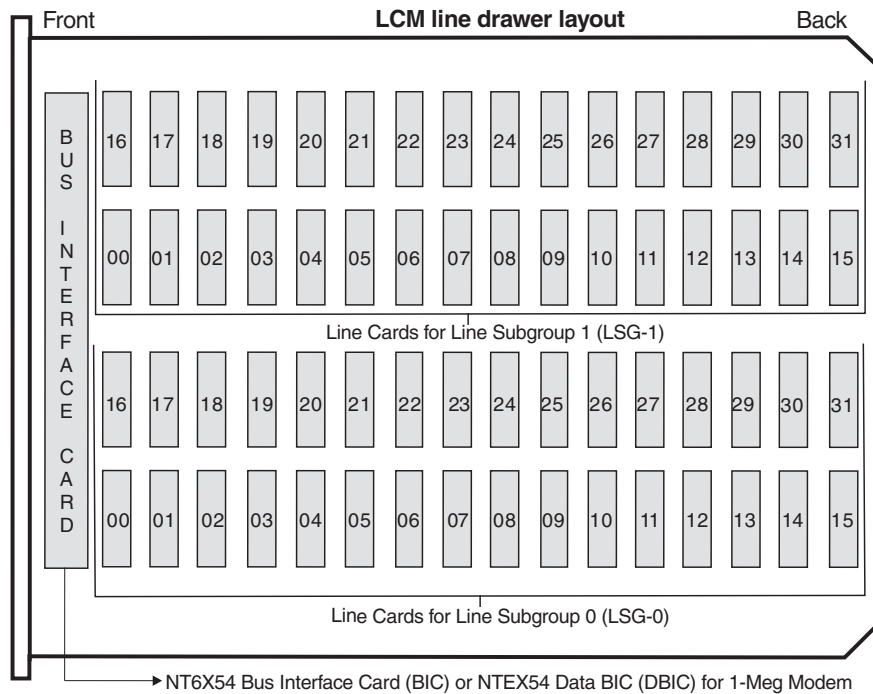

**\*Note:** See NTP 297-8063-200, *1-Meg Modem Service Implementation Guide*. The NTEX17AA and BA cards are MD as of 3/01.

**Line Concentrating Equipment (LCE) frame  
(NT6X03AA)**

**Cabinetized Line Module ISDN (CLMI) Frame  
(NTRX30DA)**

## Digital Line Module (DLM) shelf

(NTP 555-4001-101, DLM Reference Manual)

DLM Unit 0												DLM Unit 1												
6X53	8X49	8X46	6X51	6X52	4747	4747	4747	4747	5055	5050	4747	4747	4747	4747	5251	6X46	6X49	8X53	P O W E R					
					P0	O1	R2	T3	S4			P5	O6	R7	T8	S9			P O W E R

- 6X51:** LCM Peripheral Processors: controls the activity of the LCA and functions as the interface between the DS30A links and the digroup controller; preforms sanity checks, collects digits and messaging for up to 640 lines, monitors power and ringing functions, and recovers and generates clock signals  
**NT6X51AA** = 64K Memory    **NT6X51AB/AC** = 256K Memory
- 6X52:** Digroup Controller Cards Digroup Controller: functions as an interface for up to threeDS30A links and up to ten LCM drawers; supplies time switching for both external and internal channel assignments and provides the digital looparound paths used for troubleshooting
- 8X46:** Parallel Space Time Switches
- 8X49:** Digital Set Interface Processor
- 8X47:** Enhanced Digital Port Cards. **Note:** The Meridian 2000 and 3000 series sets can then be connected to (Enhanced) Digital Port Cards (DPC 8X47BA), with a maximum of 16 voice sets per card (each of which may optionally be equipped with a Meridian Asynchronous Data Option).
- 8X55:** Optional Digital Port Maintenance Card. **Note:** In order to use the 8X55 Digital Maintenance Card (DPMC), the BA release of the DPC (8X47BA) must be used.
- 0X50:** Filler Panels
- 6X53:** Power Converter: supplies +5V and +15V DC

## Intelligent Peripheral Equipment (IPE) shelf

(NTP 555-4001-129, IPE Reference Manual)

I P E	6 D 40	P O W E R	6 D 42 or 7 D 05	O P T I O N A L							7 D 07	O P T I O N A L											S P A R E
				L I N E								L I N E											
				C A R D S								C A R D S											
				0	1	2	3	4	5	6		7	8	9	10	11	12	13	14	15			
			01	02	03	04	05	06	07	08	09	10	11	12	13	14	15	16	17	18	19	20	21

- Note:** The M5000 series (Electronic Business Sets) are not supported.
- 6D40:** PE Power Supply (provides power to the IPE shelf and regulates all the voltages required by the cards on the shelf).
- 6D42:** Ringing Generator DC (required with Analog and Message Line Card configurations)
- 7D05:** Face Plate (use when Ringing Generator not required)
- 7D07:** Controller Card (Consists of a mother board and a daughter board). Uses an MC68020 microprocessor that provides the primary interface for the IPE shelf, processing power for general control, maintenance functions, and signaling format conversion between the network and line cards. The controller card receives messages from the host XPM (Line Trunk Controller, Line Group Controller, or Remote Cluster Controller), peripheral line cards, and terminating devices (such as sets).
- 8D22:** Extended system monitor (XSM) microprocessor located in the IPE pedestal base. It monitors the operation and status of the IPE power supplies, ringing gen., column thermal sensors, and blower units.

### OPTIONAL LINE CARDS

- 5D11:** Line Side T-1 Interface Line Card (LTI)
- 8D02:** Digital Line Card (DLC)
- 8D03:** Analog Line Card (ALC)
- 8D09:** Analog Message Waiting Line Card (MLC)
- 8D31:** Face Plate Line Card (for use where line cards are not equipped)

[illegible]

**Note:** RCCs and RCC2s connect to host switch via DS1 links to an LGC/LTC.

**Note:** See the “XPM Link Configuration” diagram within this QRG for more details on 6X50, 6X48, and 6X40 links & ports assignments.

**Note:** RCC packs listed on the next page.

**Note:** The RCC2 and RCC2-EXT shelves are on the following pages. The RMM shelf is located on the same page as the MTM within this QRG. The LCA shelf and LCME Line Drawer can also be found in this QRG. For further information on the RSC, see:

(NTP 297-8361-550, OPM Maintenance Manual)

Figure 1 is a detailed line drawing showing the front view of two adjacent equipment bays, BAY 0 and BAY 1, of an Engine Control Unit (ECU). The bays are vertical racks filled with various electronic and mechanical components.

- BAY 0 (Left):**
  - Top section: Labeled "LCA-1" and "LCA-0", each containing four horizontal slots.
  - Middle section: Labeled "HIE", containing a dense array of vertical components.
  - Bottom section: Labeled "ECU BAY 0", containing a row of vertical components.
- BAY 1 (Right):**
  - Top section: Labeled "BCC0" and "BCC1" on the left, and "RECT1", "PCU", and "RECT0" on the right.
  - Middle section: Labeled "DS-1 Repeater Cards" and "FSP" on the left, and "RMM" on the right.
  - Bottom section: Labeled "ECU BAY 1", containing a row of vertical components.

Various other components and features are labeled with leader lines:

- Hi temp Alarm:** Located at the top left and top right of the bays.
- Fuse panels:** Located at the top left of BAY 0.
- Bay locking knobs:** Located at the top of each bay.
- Door switch:** Located at the top right of BAY 1.
- Low temp heater switch:** Located at the bottom left of BAY 0.
- Diffuser filters:** Located at the bottom of each bay.
- Low temp alarm sensors:** Located at the bottom of each bay.
- Damper cont. Sens:** Located at the bottom right of BAY 1.

# Message Services Module (MSM) for DMS VoiceMail

(NTP 297-7001-502, DMS VoiceMail Card Replacement Procedures)

DMS VoiceMail is a voice processing system designed to provide call answering and voice messaging services for the central office (CO) environment. A DMS VoiceMail system uses a message services module (MSM) and voice processing software, and is administered from either a local or remote terminal.

- GX08** — T1 Main CP
- GX10** — Bus Controller Main CP
- GX12** — VP12 CP
- GX14AA** — 1200 MB Disk Module Assembly
- GX14BA** — Dual 1200 MB Disk Module Assembly
- GX15** — Disk Tape Module Assembly
- GX19** — Filler Packs
- GX91** — +5V/+12V Power Converter CP

The following are Paddle Boards located in the back (**not shown above**):

- GX04AA** — Bus Term. Transition Mod. PB (Slot 32 in back of shelves)
- GX04BA** — Bus Extender Transition Module PB (Slot 7 in back of shelves)
- GX06** — 68K Transition Module PB (Paddle Bd in back of shelves)
- GX07** — Modem Transition PB (Slots 20 & 25 in back of shelves)
- GX09** — T1 Transition Module PB (Slot 22 in back of shelves)
- GX11** — Bus Cont Transition Mod PB (Slots 9 & 10 of Primary shelf)

**Note:** The transition PB provides connections to external devices.

## TOPS IP-XPM Gateway Peripheral

An Internet Protocol (IP) “gateway” device provides the bridge between the circuit-switched TDM and the packet based IP networks. An IP address, which takes numerical and alphanumeric forms, identifies each device on the network. See table IPINV for provisioning.

**RX50FD** — CPU Personality Module

### SDM Cables:

- NTRX5104** — 10 base-T (RJ45 connector)
- NTRX5132** — 100 base-T (RJ45 connector)
- NT0X26AZ** — RS232 Cable (for initial Modem setup only)
- NT0X97AE** — DS512 Fiber Optic Cable

**SDM Quick References continue on the next page.**

## SDM References

- Logs:** SDM, (See NTP 297-5051-840)  
**Note:** Log files exist on the SDM in directory /var/adm. Use unix commands: more, pg, or tail to view logs.
- Tables:** MSCDINV, IPNETWRK, IPHOST, SDMINV  
 (See NTP 297-5061-906 & NTP 297-8001-351)
- Commands:** QuerySDM, Platform, Locate (On SDM MAP level)  
 (See NTP 297-5061-906)
- Documentation:**  
 NTP 297-5061-906, *SuperNode Data Manager (SDM-FT)*  
 NTP 297-5051-300, *SDM SuperNode Billing Application Guide*  
 NTP 297-5051-304, *SuperNode Data Manager Upgrade Guide*  
 NTP 297-5051-543, *SDM Alarm Clearing & Perf Monitoring Procedures*  
 NTP 297-5051-908, *SDM DCE Troubleshooting Guide*

## Helpful SDM and Other Unix Commands

**Note:** For some commands, like **ping** and **netstat**, you can use **Ctrl <C>** to stop activity and **Ctrl <Break>** to resume.

- >**awk** awk utility
- >**billmtc** starts the SDM Billing Maintenance Interface
- >**copylogfile** copies one log file to another
- >**cut** writes out selected columns from each line of a file
- >**dellogfile** removes log file(s)
- >**df** list space information for the file systems
- >**entstat** show ethernet device statistics
- >**exit** logs user out of the SDM
- >**ftplogfile** starts ftp session to transfer log files
- >**grep** search a file for a pattern
- >**help** displays generic help information
- >**iostat** list disk I/O status
- >**ipcs** list IPC status
- >**listlogfile** lists all log file(s)
- >**locate** queries hardware module information
- >**logout** logs user out of the SDM
- >**logroute** invokes the Log Delivery Commissioning Tool
- >**lsattr** list attributes for devices in the system
- >**lscfg** list the system configuration
- >**lsdev** displays devices and their characteristics
- >**lsent** list characteristics for a logical ethernet device
- >**lsfs** list all the file systems
- >**lslpp** lists installed software products
- >**lsp** list paging space characteristics
- >**lspv** list physical volumes on the system
- >**lssrc** show status of the SRC managed daemons
- >**lsstate** list device status on FX
- >**netstat** network debugging command
- >**odmget** retrieve objects from ODM
- >**oslevel** reports the latest installed maintenance level
- >**ping** sends ICMP ECHO\_REQUEST packets to network hosts
- >**ps** reports process status
- >**querysdm** queries information about the SDM
- >**sdmiv** list the logical volumes on the SDM
- >**sdmmtc** starts the SDM Maintenance Interface
- >**shmget** show SDM shared memory status
- >**sort** sorts and merges files
- >**traceroute** IP packets route tracing in networks
- >**viewlogfile** views log file
- >**vmstat** list virtual memory status
- >**who\_is\_on** displays the users logged in to the SDM

## Command base\_mib\_all

Some SuperNode Billing Application (SBA) Management Information Bases (MIBs) are not accessible via the BILLMTC mib tool. You can use the **base\_mib\_all** command in directory /sdm/sba/NA100/bin or directory /sdm/sba/DMS500/bin to get and set the following MIBs.

The command format:

To view an mib value: **./base\_mib\_all get -rx <mib\_parameter>**

To set an mib value: **./base\_mib\_all set -rx <mib\_parameter> y**

%%<mib\_parameter> is the different mib parms (i.e. name, variables).

%%y is the new value you want to assign to that mib name.

- schDestLoginPassword (The password for the Login into the DPMS)
- rcDNSSeqNumber (The sequence # for the DNS Formatted streams)
- rcDIRPSeqNumber (The sequence # for the DIRP Formatted streams)
- rcCloseFilesOnGetFiles (If set to "1", then all open files are closed and sent when a sendfile occurs)

**Note:** The Paddle Boards shown above are provisioned for eight 3-pack LIU shelves. See NTP 297-8991-805 and the NT9X72AC shelf layout for other provisionable options such as: the NT9X77 V.35 Paddle Board (PB), the NT9X79 F-bus extender PB, the NT9X85 Ethernet AUI PB, the NTEX20 Intra F-bus 1 termination PB, and the NTEX30 Frame Relay T1 PB. Various NT9X19 filler packs for power, vacant slots, and paddle board slots are described within NTP 297-8991-805.

**Note:** For 12 two pack LIU shelves and other enhanced capacity EIU, FRIU, and NIU assignments, see the following pages or reference NTP 297-8991-805 and the NT9X72BA shelf layout located within the NT9X70BB cabinet.

Link interface shelf configurations continue on the next page.

(Example shown with twelve 2-pack CCS7 Link Interface Units (LIUs))

[illegible]

**Note:** Slots 7,8,9 front and 30,31,32 front can be equipped with two LIUs.

The various packs shown in these slots are for either a two or three pack LIU (the EX22 pack identifies a two pack LIU). If not equipped with LIUs, then these and the associated interface (IF) slots will have filler packs equipped.

**Note:** For further description of the following SNSE 16K ENET packs, see the “Circuit Pack Description” within this QRG or see NTP 297-8991-805.

## 9X13 — CPU Processor

### 9X41 — Link Paddle Board

## 9X13FA — ENET CPU Processor

**9X45 — DS-30/DS512 IF PB**

## 9X19AA — Filler Pack

## 9X74 — F-Bus Repeater

## 9X19BA — Paddle Board Filler

## 9X75 — P-Bus to F-Bus IF

## 9X30 — Power Converter

## 9X76 — Signaling Terminal

## 9X31 — Power Converter

**9X77 — DS0A Interface PB**

## 9X35 — 16K X 16K Crosspoint

**9X78 — DS0A Interface PB**

## 9X36 — Clock & Message

**9X79 — F-Bus Extension PB**

**9X40 — I/F Paddle Board (PB)**

## EX22 — Integrated Proc. & F-bus

## SuperNode SE LPP Link Interface shelf

[illegible][illegible]

**Note:** For further description of the following SNSE LPP LIS packs, see the “Circuit Pack Description” within this QRG or see NTP 297-8991-805.

## 9X30 — Power Converter

## 9X96 — LIS FBUS Controller

## 9X74 — F-Bus Repeater

**9X98 — LIS Fiber Interface PB**

## 9X76 — Signaling Terminal

**EX20** — Intra F-bus 0 Term. PB

**9X78 — DS-OA Interface PB**

## EX22 — Integrated Processor

**9X79 — F-Bus Extension PB**

## XA-Core shelf (NTLX0101)

(NTP 297-8991-511, DMS SN & SNSE XA-Core Maintenance Guide)

**Note:** Provisioning will vary depending upon configuration.

***** Shelf As Seen From Front *****																	

**Note:** The XA-Core shelf replaces the CM and SLM shelves for the SuperNode and the combined CM/SLM shelf for the SNSE. Any SuperNode shelf left empty because of an XA-Core retrofit is replaced with a NT901FB Filler Shelf.

**Note:** For further description of the following XA-Core packs, see the “Circuit Pack Description” within this QRG or see NTP 297-8991-810 or NTP 297-8991-511.

**LX02** — Processor Element (PE) CP

**LX03AA** — Input/Output Processor CP (One-slot for CMIC and RTIF)

**LX03BA** — Input/Output Processor CP (Two-slot for disk and tape)

**LX05** — OC-3 Two-port Interface Packlet for CMIC

**Note:** The NT9X63AA or BA OC-3 interface paddle board is used to connect the CMIC links (OC-3) between MS & XA-core NTLX05 CMIC packlet.

**LX06** — Disk Drive Packlet

**LX07** — Digital Audio Tape (DAT) Tape Drive Packlet

**LX08** — RS232/422 Serial Interface Packlet (Rem Term IF (RTIF))

**LX12** — Shelf Interface Module (SIM) (Power supply)

**LX14** — Shared Memory (SM) CP

**LX20AA** — Filler Pack

**LX20BA** — Terminating Filler Pack. The terminating filler pack is installed in any slot in the XA-Core shelf not occupied by a processor element (PE) pack, a input/output processor (IOP) pack, or a shared memory (SM) pack. **Note:** Slot 15F must contain a NTLX20BA pack.

# Distributed Processing Peripheral (DPP) (MD'd 4Q00; replaced with SBA on SDM)

- 6M85 — 56 Kbps Crossover Interface Cable Assembly

These packs  
are located in  
the back of the  
DPP

**Note:** DIP switch settings can be found in NTP 297-1001-539.

# DPP Commands

**Note:** Use the following DPP commands with caution and refer to the following document for information on their use:

- NTP 297-1001-539, DPP Hardware Component Replacement Guide
- NTP 297-1001-544, DPP Quick Reference Guide
- NTP 297-1001-545, DPP Commands and Messages Guide

## Alarm Operations:

>ERRMAP ALARMS      Displays a list of active alarms on active and standby processor.

>ERRMAP e t l      Change specified alarm parameters.  
e = Event #: 1-99  
t = Alarm type: INHIBIT, MINOR, MAJOR, CRITICAL.  
l = level of alm: 0-3.

>RSERR s nn      Reset alarms on a selected processor.  
s = ACT or STDBY  
nn = event #(1-99) or 00 for all active side alarms.

## System Clock:

>CLK s      Display time of a selected processor.  
s = ACT or STDBY

>SETCLK yy mm dd hh mm ss day      Set or change time on the active processor.  
yy = year  
mm = month  
dd = date  
hh = hour (24 hour clk)  
mm = minutes  
ss = seconds  
day = MON,TUE,WED,THU,FRI,SAT,SUN

## Boot File:

>BOOT ADD xxxxxx yy      Append a program name to boot list.  
xxxxxx = program name  
yy = program version on disk.

>BOOT s      Load program files listed in the boot file to a processor.  
s = ACT or STDBY

>BOOT DELETE      Deletes the Last file name in boot file.

>BOOT LIST      List the contents of the boot file.

## NON-TURBO Disk Operations:

>DISK DEFMAP x      Enter the defective tracks for 30-140 mb disk drives only.  
(MAP INFORMATION PROVIDED WITH DISK)  
x = disk drive: A or B

>DISK FORMAT x      Format specified disk drive.  
Takes several minutes.

**Note: Do not use for 380 mb non-turbo disk drives.**

**CAUTION: This command will erase all data from specified disk drive. Should not be done during high traffic.**

>DISK INIT 1x      Short Init specified disk

>DISK MODE      Displays the current disk mode.

>DISK MODE xy      Change current disk mode.  
This can take several hrs.

**CAUTION: This command can over write needed data.**  
x = Primary disk: A or B  
y = O: No standby disk online  
OR  
y = P: Standby disk online

>DISK PARAM      Displays choice of disktypes used for Non-turbo DPPs.  
Enter 1 - 9 depending on the disktype used.

>DISK VS      Displays the disk firmware version.

>DISK USAGE      Displays the number of tracks used / total tracks available.

## TURBO & 3.5" Disk Operations:

>DISK FORMAT x      Format specified disk drive.  
Takes several minutes.

**CAUTION: This command will erase all data from specified disk drive.**

>DISK MODE      Displays the current disk mode.

>DISK MODE xy      Change current disk mode.  
This can take several hrs.

**CAUTION: This command can over write needed data.**  
x = Primary disk: A or B  
y = O: No standby disk online  
OR  
y = P: Standby disk online

>DISK RESTART      Perform a reset on the DISK INTERFACE PCB.

>DISK VS      Displays the disk firmware version.

>DISK USAGE      Displays the number of tracks used / total tracks available.

Continues on the next page

**Index Manipulation:**

>IDXMAINT CLOSE           Close file currently open for read.

>IDXMAINT CHECK t        Check the index file.

>IDXMAINT CREATE DIR t i   Creates a new index file with primary data only.

>IDXMAINT CREATE DIR t i p   Creates a new index file with secondary and primary data.

>IDXMAINT CREATE DIR t i p v2   Creates a new index file with secondary and primary data plus the version containing the requested primary sequence number (see IDXMAINT SUMMARY).

>IDXMAINT CREATE FILE t    Closes open call record file and opens new file.

>IDXMAINT DELETE t       Delete oldest secondary file from disk and updates the index.

>IDXMAINT DIR CLOSED t v   Displays the closed files on the disk.

>IDXMAINT DIR OPEN t       Displays the open file being written to on the disk.

>IDXMAINT EXAMINE t f s    Displays a selected block from the DPP disk by sequence number.

>IDXMAINT EXAMINE t f s d   Displays a selected block from the DPP disk by sequence number. 'd' = either NEW or OLD, depending on whether the sequence number is the first (OLD) or second (NEW) occurrence of a duplicate sequence number in the index (see IDXMAINT SUMMARY).

>IDXMAINT EXAMINE t NEXT r   To continue to display a selected range of blocks from the DPP disk.

>IDXMAINT SUMMARY t       Displays a summary of indexed files.

    d = is valid with DPP loads D1T008, D2T008 & DPT035

    t = filetype: AMA, LOG, or EXC.

    f = format: ASCII (LOGS only), EBCDIC, HEX, PACKED (AMA Blocks) , or HDR (header of AMA block only).

    i = version # to begin index.

    p = first sequence # to be primary.

    r = # of blocks to view 1-100.

    s = selected sequence #: 0 to 999999.

    v = # of versions to be displayed 1 - 200

    v2 = is valid with DPP loads D1T008, D2T008 & DPT035.

**File Manipulation:**

>CLSACT i               Closes open file.

    i = file id # from LSTACT.

>DELFILE f v            Deletes a particular file and version or a range of versions.

    f = filename.

    v = file version #. 0 is the latest version.

    or

    v = range of versions 1 255.

## EXAMPLE:

>DELFILE BMCCRD 3 150   Deletes filename BMCCRD versions 3 to 150.

>DMPFILE f v b c        Used to output a specified number of blocks from a specified file for examination.

    f = filename.

    v = file version #. 0 is the latest version. (0-255) one version at a time.

    b = Specifies starting block; range = 0 - 999,999.

    c = Specific number of block to dump; range = 0 - 9,999.

>LSTACT                Displays list of all currently open files.

>LSTDIR ACT i           Lists the directory entry for the active file specified.

    i = file id # from LSTACT.

>LSTDIR ALL            Lists all files in disk directory.

>LSTDIR FILE f v        Lists the directory entry of a specified file.

    f = filename.

    v = file version #. 0 is the latest version. (0-255) one version at a time, or:

    v = range of versions 1 - 255.

## EXAMPLE:

>LSTDIR FILE BMCCRD 3 150   Displays the directory entry for filename BMCCRD versions 3 to 150.

**Polling Link:**

>LINIT                Aborts any active polling session and initializes the polling links.

>LNKDSC               Aborts polling session in progress and, causes DTR to drop for 5 seconds.

POLLOLD               This maintenance command toggles between the newest and oldest occurrence of a sequence number for the next polling session only.

**Note:** Immediately follow command LNKDSC with the command LINIT.

Continues on the next page.

Processor Activity:

>SWACT o Change current active processor (A to B or B to A).  
o = **FORCE**: optional entry  
reset any alarms on the standby processor and then performs the SWACT.

Site Data Entry:

>AMAHRS Displays hour boundaries currently assigned.  
>AMAHRS s e Set the time interval to verify that AMA records have been received from the Switching System.  
s = two digit start time(00 - 23).  
e = two digit end time (00 - 23).  
>AMATPSW Examine the AMAT Password.  
>AMATPSW t i Change AMAT password.  
t = 4 digit sensor type  
i = 6 digit sensor id  
>BX25PARM PRIHDR Displays the current AMATPS requirements.  
>BX25PARM p Change the AMATPS parameter.  
P = **PRIHRD1** = 1986 AMATPS requirement.  
**PRIHRD2** = 1990 AMATPS requirement.  
>BAUD Displays current polling baud rate for the link on NON-TURBO or Links 1 & 2 for TURBO DPPs.  
>BAUD r Change polling baud rate for the NON-TURBO link.  
r = baud rate: **1200/2400/4800/9600**.  
Polling link NON- TURBO is J1  
>BAUD l r Change polling baud rate for the TURBO links 1 & 2.  
l = link: 1 or 2.  
r = baud rate: **1200/2400/4800/9600/56K**.  
Link 1 = J11 for 56K polling, J13 for 1200 thru 9600 baud polling.  
Link 2 = J12 for 56K polling, J14 for 1200 thru 9600 baud polling.  
>COLLPSW Displays current collector password.  
>COLLPSW # t i Change the collector password.  
# = Collector Password #:1, 2  
t = 4 character office type.  
i = 6 character office id.  
>SITDAT READ Reads (restores) the site data parameters from the DPP disk and over writes the main memory (RAM).  
>SITDAT WRITE Updates (Saves) the site data parameters from memory to disk.  
>VALPARM BLOCKS Displays the minimum number of blocks needed in the open write AMACRD file before the file is closed at the beginning of a primary poll.  
>VALPARM BLOCKS x Change the minimum block number.  
x = **1-999** (default is 200).  
>VALPARM INVALID Displays invalid blk quantity threshold value currently assigned.  
>VALPARM INVALID b Change invalid blk quantity threshold.  
b = number of blocks:**0-65535**  
>VALPARM LOGHDR Displays current status of the log header either enabled or disabled.  
>VALPARM LOGHDR x Enables or Disables the display of the block header as they are written to disk.  
x = **ON/OFF**

Program Versions:

>CP VS s Displays the selected 56K Comm processor software program version ID and firmware version ID.  
s = **ACT** or **STDBY**

Note: CP command is for TURBO DPPs only.

>DISK VS Displays the disk firmware version ID.  
>DSIMAIN SHOW x VS Displays the active processor firmware version ID for the selected DSI.  
>DOS S DSIMAIN SHOW x VS Displays the standby processor firmware version ID for the selected DSI.  
x = DSI Port ID: 1 or 2.  
= 1 = DSI in slot A13  
= 2 = DSI in slot A12.  
>VS s Displays the selected processor software program version ID and firmware version ID.  
s = **ACT** or **STDBY**

Statistics:

>AMATSTAT Displays a summarized status report of AMAT records on DPP disks.  
>CLRSTATS Clears today's statistics file reports.  
>REPORT t p Displays a compiled list from a selected statistical file available on the DPP disk.  
t = type: **AMA, DISK**  
p = period: **TDAY** (Today), **YDAY** (Yesterday)  
>SESSION REPORT Displays last or current polling session report.  
>SESSION STATUS Displays current status of polling.

Continues on the next page.

DPP Commands continue.

#### Testing:

>DPRTST                      Performs a Dual-Ported Random Access Memory test on standby processor.

>TEST s                      Performs built-in-tests on selected processor.  
s = ACT or STDBY

#### DSI Functions:

>DSIMAINT SHOW x a        Displays the argument of the selected DSI port on the active processor.

>DOS S DSIMAINT SHOW x a    Displays the argument of the selected DSI port on the standby processor.

x = DSI Port ID: 1 or 2.

  = 1 = DSI in slot A13

  = 2 = DSI in slot A12.

a = argument: ERROR, STATUS, or VS.

ERROR:Displays the error count since the last rewind. CRC = Cyclic Redundancy Check, PAR = Parity, COMM = DSICommunication failures.

STATUS:Displays the last command, status, and number of blocks received.

VS:Displays the firmware version ID.

#### CP:

Note: All CP commands are for TURBO DPPs only.

>CP BOOT s                Loads the contents of the BOOTCP file to the active 56K Comm Processor.

>CP BOOT ADD xxxxxx yy    Append a new file name to the BOOTCP file.

>CP BOOT DELETE           Remove the last file name in the BOOTCPfile.

>CP BOOT LIST            Displays the contents of the BOOTCP file.

>CP CLOCK                Examine the 56K Comm processor clock source.

>CP CLOCK l c            Change the 56K Comm processor clock source.

>CP INTERFACE            Examine the CP interface used for polling.

>CP INTERFACE l z        To change CP interface.

>CP LOOP s                Performs loop test between main processor &

56K Comm processor on the selected side.

>CP TEST s                Performs a series of tests on the selected 56K Comm processor.

>CP VS s                Displays the selected 56K Comm processor software program version ID and firmware version ID.

c = clock source:

INTERNAL = DPP uses its own clock.

EXTERNAL = DPP uses an external clock.

l = LINK #: 1 or 2

Note: Link 1 = J11 for 56K polling, J13 for 1200 thru 9600 baud polling.

Link 2 = J12 for 56K polling, J14 for 1200 thru 9600 baud polling.

s = ACT or STDBY

xxxxxx = CP program name

yy = program version on disk.

z = RS232: for 1200 thru 9600 baud on J13 or J14 or;

z = V35: for 56k baud on J11 or J12.

#### Monitor Level

#### EQUIVALENT Software Command

Note: These commands are used for certain tasks to be performed on the DPP, when the CPU software is not running. Certain commands will only work in the DIRECT mode.

>BOOT s                    BOOT s

>BOOT ADD xxxxxx yy        BOOT ADD xxxxxx yy

>BOOT DELETE                BOOT DELETE

>BOOT LIST                  BOOT LIST

\*>DD FORMAT x                DISK FORMAT x

\*>DD MOD                    DISK MODE

\*>DD MOD xy                 DISK MODE xy

\*>DD INIT lx                DISK INIT lx

\*>DD PARAM                  DISK PARAM

\*>DD VS                     DISK VS

>DELETE f v                DELFILE f v

>DOS                        Displays the processor status.  
response: yz  
y = processor currently being communicated with:  
  A or B.  
z = status of processor being communicated with:  
  A = active, S = standby,  
  O = only, or U = unused.

\* This command is for NON-TURBO DPPs only. Use the Software commands for TURBO DPPs.

**Note 1** One (1) Smart Connector Extension Cable, NTFX40UC, is required when connecting to J16 on the DS6 modem shelf.

**Note 2** One (1) Smart Connector DB25 Gender Adapter Cable, NTFX40UD, is required when connecting to modems equipped with a 25 pin male connector.

## XPMTRAK

(TAM-1001-004 PMDEBUG Technical Assistance Manual)

**Note:** Reference the TAM for a complete list of XPMTRAK commands and any **CAUTIONS** and **WARNINGS** about their use.

PMDEBUG XPMTRAK can gather a trmtrace, msgtrace, and pgmtrace all at once.

To set up XPMTRAK:

```
>PMDEBUG <xpm> <#> <unit>
>XPM
>TR ON                %% trmtrace
>MS ON                %% msgtrace
>PG ON                %% pgmtrace
>SE <nn> <tn>        %% external node & terminal number
>STAT
>STAR
***** Make test call now *****
>STO
>ALL DISPLAY FULL
>A C                  %% clears all buffers
>R <nn> <tn>
>*                    %% exits out of XPMTRAK level
>QUIT
```

## ACDDEBUG

(TAM-1001-001 TAS Nonresident Tool Listing)

**Note:** Reference the TAM for a complete list of ACDDEBUG commands and any **CAUTIONS** and **WARNINGS** about their use.

ACDDEBUG tool is used for debugging the ACD system. The ACDDEBUG CI provides facilities for examining and altering ACD data structures in both stationary and dynamic ACD environments. This tool can be used to display the real-time status of ACD/NACD agents, groups, and queues.

The utility can be found on the TASNONRES tape. Execute filename ACDNONR\$FC.

Available commands:

```
>CPIDTOAGT    Displays LEN and DN for entered cpid, and the CLLI
               and member # for entered trunk cpid.
>QUERY        Allows for the display of ACD structures.
```

Following is an example of a QUERY command and response:

```
>QUERY NETWORKDATA GROUP NACDD
```

NACD Group NACDD Network Data

```
QTHRESH:      0
WTHRESH:      0
SRCE_PWF:     31
SRCE_RI:      0
SRCE_DM:      0
BEST_GROUP:   NO
```

```
TRGT_GRP:     0
NACD_SEL:     REM
  REM_GRP:    NACDP
  PWF:        31
GRPS_TALKING: YES
  SRCE_RI_LAST_SENT: 0
  DEST_RI_LAST_RECEIVED: 0
  DEST_DM:    0
```

# XPMIST

(TAM-1001-007 PMIST User Guide)

**Note:** Reference the TAM for a complete list of XPMIST commands and any **CAUTIONS** and **WARNINGS** about their use.

To set up XPMIST:

```
>XPMIST
>SELECT ON
>ASSOCIATE ENA
>ASSOCIATE ON
>INCLUDE <node #> <terminal #> <node #> <terminal #> ...*
>INTERCEPT BOTH MON
>RECORD OPEN <device> <filename>
* Include up to eight node/terminal number combinations.
```

Place test calls. When finished:

```
>RECORD CLOSE
>DISPLAY <filename>
```

For longer files you can extract by time, callid, or terminal number:

```
>EXTRACT OPEN <filename>
>EXTRACT FROM <hour> <min> <sec> TO <hour> <min> <sec>
—or—
>EXTRACT CALLID <callid>
—or—
>EXTRACT TID <node> <terminal #>
>EXTRACT CLOSE
```

**Note:** You may need to type TERMINATE in XPMIST prior to setup if the file does not seem to be collecting data.

## TERMTRACE Setup

1. Find the NN and TN.
2. >PMDEBUG <pm type> <pm #>  
Ex: >PMDEBUG DTC 0 %% BY NOT SPECIFYING THE UNIT #,  
THE ACTIVE UNIT WILL AUTO-  
MATICALLY BE SELECTED
3. >CP
4. >E <nn> <tn> %% NOTE DOWN THE INTERNAL TERMINAL #
5. >\* %% GO UP ONE LEVEL
6. >TR %% GO INTO TERMTRACE
7. >I %% Should terminals/event data survive restarts?
8. >N
9. Enter <starting term> <ending term> range %% INTERNAL  
TERMINAL #
10. <cr> for max physical buffers
11. >A <starting term> <ending term> %% ASSIGN THE INTERNAL  
TERMINAL #
12. >L 3 %% Always use level 3
13. >E %% Enable termtrace  
\*\*\*\*\* Make test call now \*\*\*\*\*
14. >D %% Disable the tracing
15. >P %% Go to printout level
16. >D <starting term> <ending term> %% Dump the termtrace data
17. >\* %% Go up one level
18. >U %% Unassign the internal number
19. >K %% De-allocates the buffers
20. >\*\* %% Up 2 levels
21. >QUIT %% Quit out of PMDEBUG

## REMLOGIN Command

This allows users on the central node (CM node) to login to other SOS based nodes and execute CI commands there. While in REMLOGIN, other tools such as LOGUTIL, FOOTPRT, and DEBUG can be used. An SOS109 log is generated each time REMLOGIN is entered and exited.

**Note:** Read the WARNING notice after inputting the command.

```
>REMLOGIN <QUERY or <node name>> [ <infile> ] [ <outdev> <outfile> ]
>QUERY displays current remote CI session information.
>QUERY ALL displays all users with remlogin sessions currently
active on any node.
>STORE ALL USAGE displays data and program store amounts.
>SWNODE used to switch between CI and remote sessions.
>IMAGENAME displays load image name information of node.
>REMLOGOUT used to logout of REMLOGIN.
```

# XPMIST Call Processing Messages

(TAM-1001-007 PMIST User Guide)

## TIER II SUPPORT TOOLS

ABANDON_MSG	Trunk exited during digit collection.
ANI_MSG	Reports results of ANI identification on party line.
ANSWER_MSG	Terminal answered the call.
ATD_RESULT_MSG	Reports results from an audio tone detector.
CALL_ABANDONED_MSG	Line exited during digit collection.
CALL_FAILURE_MSG	Terminal detected call failure.
CHANNEL_BLOCKING_MESSAGE	Call blocked in XPM (no P-side channel).
CLEAR_BACK_MSG	Outgoing trunk exited.
CLEAR_FORWARD_MSG	Incoming trunk exited.
COIN_MSG	Reports results of a coin control function on a coin line.
CONF_AVAILABLE	Conference circuit now available (after queueing).
CONFUSION_MSG	Terminal detected a supervision error.
CPOS_AVAILABLE	CAMA position now available.
CPWAKEUPMSG	Reports time-out from the CP wakeup utility.
DGT_RECEPTION_ERR_MSG	Error detected during DTMF digit collection.
DIGITS_MSG	Reports dialed digits; collection continuing.
DIGITS_SENT_MSG	Outgoing trunk has finished outpulsing.
DM_REPORT_MSG	Reports key hits from TOPS, AOSS, IBN AC.
DP_RECEPTINO_ERR_MSG	Error detected during DP digit collection.
EXIT_MSG	Line exited.
FEATURE_MSG	Requests invocation of an FPE feature.
FLASH_MSG	Terminal flashed.
GLARE_MSG	Glare detected on a trunk.
INTEG_FOUND_MSG	Terminal found integrity.
INTEG_LOST_MSG	Terminal lost integrity.
INTRA_BLOCKING_MSG	XPM couldn't intraswitch; reroute through NMs.
LAST_DIGITS_MSG	Reports dialled digits; collection stopped.
LOCKOUT_MSG	Terminal failed to idle properly.
OPERATOR_CONTROL_MSG	Winks detected on an operator trunk.
ORIG_DIGITS_MSG	Trunk wishes to originate a call; digits collected.
ORIG_KEY_MSG	PPhone wishes to originate a call on non-DN key.
ORIGINATION_MSG	Terminal wishes to originate a call.
PREEMPT_CLEAR_MSG	Autovon trunk exited due to other-end preempt.
PREEMPT_INTERNAL_MSG	From preempting call to preempted call.
PREEMPT_REUSE_MSG	Release Autovon trunk for use by a new call.
RCVR_AVAILABLE	RCVR now available (after queueing).
RCVR_ERROR_MSG	Error detected during digit reception.
RELEASE_CALL_MSG	Terminal is to be force released.
REMOTE_BUSY_MSG	Line is to be force released.
REMOTE_DATABASE_CP_NOTICE_MSG	Response received from DCP (US Sprint).
RINGING_TROUBLE_MSG	Error detected during ringing of line.
ROUTING_MSG	Causes setup processor to invoke router.
SA_MSG	Reports results to service analysis system.
SEIZED_MSG	Outgoing trunk seized successfully.
SVCT_AVAILABLE	Sender now available (after queueing).
TREATMENT_MSG	Causes setup processor to apply treatment.
UTR_DENIED	XPM could not obtain receiver for digit collection.
WINK_MSG	Wink detected on a CAMA trunk.
XPM1_CC_FEATURE_MSG	Feature message requested from XPM, 0-63.
XPM2_CC_FEATURE_MSG	Feature message requested from XPM, 64-127.

# XPMIST Breakdown for Attendant Console

(TAM-1001-007, PMIST User Guide)

**Note:** The following examples contain abbreviations and may not appear exactly as a printout would.

### XPMIST Example:

INCOMING 13:51:05.3    NODE TYPE= TM\_NODE    DM\_REPORT\_MSG  
NN= 0031 TN= 0007 MSGTAG= 01 ROUTE= 4080 ERR= 00 LENGHT= 13  
AGENT= DMODEM 22  
5F 00 00 07 01 14 12 0F 15 6C 1C  
CALLID= 925734

key hit message                      digits dialed: **5306**  
                                         1 + 4 -> **5**  
                                         1 + 2 -> **3**  
                                         0 + F -> **0**  
                                         1 +5 -> **6**

### XPMIST Example:

INCOMING 13:51:05.3    NODE TYPE= TM\_NODE    DM\_REPORT\_MSG  
NN= 0046 TN= 000F MSGTAG= 01 ROUTE= 4000 ERR= 00 LENGTH= 0F  
AGENT= DMODEM 10  
5F 00 00 03 01 3C 1C  
CALLID= 689675

                                         key number from “Internal to Physical Key Mapping”  
                                         diagram: **3C** -> key **29** in Table FNMAP  
key hit message

### XPMIST Example:

00 38 CALLXEC C3                      **A U T H : I N P U T**  
02 42 CDTB                      1D 30 90 97 07 41 55 54 48 3A 20 49 4E 50 55 54 20 20 20  
                                         20 20 87 00 00 C0 00 96 10 0C

display message — ASCII characters

### XPMIST Example:

00 38 CALLXEC C3                      lamp messages  
02 42 CDTB0B    30 90 82 02 82 7B 88 00 0C 00 00

02 -> 0000 0010: lamp 0 — 120 IPM  
7B -> 0111 1011: lamp F — on

lamp states:                                      state  
000 = off                                              lamp  
001 = 60 IPM  
010 = 120 IPM  
011 = on  
111 = 20 IPM

lamp numbers (from CI):  
>AC <console CLLI> DISPL LAMPS

## Decimal to HEX to Binary Chart

Decimal	HEX	Binary
0	0	0000
1	1	0001
2	2	0010
3	3	0011
4	4	0100
5	5	0101
6	6	0110
7	7	0111
8	8	1000
9	9	1001
10	A	1010
11	B	1011
12	C	1100
13	D	1101

## ISDN BRI Troubleshooting PM180 and PM189 Logs

Scenario: The following PM180 has just occurred from LTC 3:

```
* PM180 JAN1 19:12:49 1300 TBL PM SW EXCEPTION REPORT
LTC 3 Unit 0 : Act
TASKID: 000E000E MPAUDTK, TIME: 19:12:48.99, COMID: FF NILCID
TEXT : transsb 00 01 1B 64 00 15 00 00
```

Additional information on PM180s and PM189s can be obtained from the PMDEBUG Swerr level. Use the following procedures:

### STEP 1. Determine the SETTID of the SWERRing set:

SETTID information can sometimes be derived from the text of the PM180/189. In this case, the PM180 text is: 00 01 1B 64 00 15 00 00. ISDN BRI terminal numbers (settids) range from 6700 to 7055 (#1A2C to #1B8F). Using PMDEBUG, the decimal settid can be used to determine which ISDN line is responsible for the PM SWERR. In this case, our SETTID = #1B64.

### STEP 2. Determine the DN of the SWERRing SETTID:

First convert #1B64 to decimal number 7012. Next go into PMDEBUG and go to the ISDncp (Bradntbl level) and do a ONEDUMP on 7012. This will give you the DN. Use the following commands:

```
>PMDEBUG LTC 3 2
>ISDNCP
>BRADNTBL
>ONEDUMP 7012
```

```
Pool idx: 7  Lidx: 0
```

## SPM PRI Q931 Message Tracing Tool (MSGTRAC)

**Warning:** Anyone using the following tool messages should be familiar with use of REMLOGIN. The PRI message tracing tool is available at the root directory level in the DLC RM for the SPM.

**Note:** The active CEM and DLC will be needed for REMLOGIN. The can be obtained after POSTing the SPM at the MAPCI;MTC;PM level.

The following is an example for using the tool:

```
CI:> remlogin spm <spm #><active CEM unit #>
dSH8:> remlogin -s<active dlc slot #>
dSH12:> cd msgtrc
dSH12:> ls (use ls command if you want to see list of msgtrac commands)
dSH12:> alloc [12/13]<nmbblks> (layer 2 = 12; layer 3 = 13;
nmbblks = 10 to 1000 buffers)
dSH12:> enable [12, 13][in, out, both]
```

For Q931 message monitoring on a specific D-Channel use commands:

```
dSH12:> dchdump (Mapping of the D-Channel ckt # timeslot to its logical
Dchnl # and 13Suld is obtained)
```

```
dSH12:> selectdch <LogDCHnum> (Note: By default, ALL the PRI
D-Channels on the SPM are selected for layer 2
and/or layer 3 message tracing. This is done so that
the SPM message tracing tool behavior is similar to
the one on the DTCI XPM.)
```

To dump out all the captured Q931 layer 2 or 3 or both messages to the screen use:

```
dSH12:> display [12, 12, both]
```

**Note:** When finished, use the **DISABLE** command to turn off tracing, the **DEALLOC** command to deallocate the buffers for layer 2 or layer 3, or both, and the **CLEAR** command to clear the D-Channel captured msgs.

# ISDN Q931 Procedures for Traces on BRI and PRI

**Note:** For BRI Q931, see NTP 297-2401-501 *DMS-100F ISDN BRI Maintenance Guide* and the chapter on “Protocol Analysis” using PMDEBUG.

## Supplemental Debug Calculations for Trunks

The following is a supplemental procedure for the calculation of low/high trunk group numbers and the trunk block and member as provided on the previous page for the “Debug Verification of Trunk State.”

### Calculation of trunk group high/low number and block and member:

To calculate Node and Terminal number use the CONVERT command in PMIST:

>CONVERT TRK <CLLI> <Ckt.#>

Verify the CP\_ID for BRISC/XA-Core

>di iocpdef:pr:#XX d 4 (&<Node>) d 2 (&<Terminal>) cp\_id

**Note:** For both NA015 and NA017:

BRISC XX = 68

XA-Core XX = 34

Display CP\_ID as WORD format:

>di iocpdef:pr:#XX d 4 (&<Node>) d 2 (&<Terminal>) --> WORD\_1 WORD\_2

To Determine the Four Indices from WORD\_1 and WORD\_2 use the following:

Bits of WORD\_1 and WORD\_2 = fedc ba98 7654 3210,

Index\_1 = bits c-5 of WORD\_1 = <trunk\_group\_number\_high>

Index\_2 = bits 4-0 of WORD\_1 = <trunk\_group\_number\_low>

Index\_3 = bits 7-0 of WORD\_2 = <block>

Index\_4 = bits f-d of WORD\_1 = <member>

## CMINFO Special System Query Commands

>CMMEM	read one or more long words.
>CMDISP	display the CM memory tables.
>ERRCNT	display the memory error counters and mismatch counters on a per module basis.
>THRESHOLD	query the different CM threshold values.
>READTOD	display time of one or more MC time-of-day clocks.
>CMADDR	translate memory address to module on card.
>READPORT	display the addresses for the port card and its error status register contents.
>CMALARM	query the CM top level alarms.
>RMSAUDIT	query the RMS audit interval.
>SHOWINV	read specified inventory table.
>SHOWOMS	read specified OM counts.
>BASETOD	query the BASE TOD.
>DBGSSC	invoke SSC Debugging Utility.
>QCONTENT	display contents of the Sparing queue supplied.
>MEMINF	display Memory Map Table information.
>MEMSTAT	display Memory Status Table information.
>MEMSUMMARY	display a summary of memory related variables.
>MEMROTATE	display a memory rotation algorithm offsets.
>REXQUERY	query REx tests.
>REXRUN	run one REx test stand-alone several times.
>CORSTAT	report status of Core Optimization Facilities.
>PRTHIST	display contents of mismatch history database.
>GETHIST	get specific information from mismatch history DB.
>CPUHEALTH	calculate CPU health indicators based on mismatch history.
>MFCTHRESH	determine whether any MFC thresholds have been exceeded.
>QUIT	exit program.

# CALLTRAK

(TAM-1001-012, CALLTRAK User Guide)

**Note:** CALLTRAK has a significant REALTIME impact on the switch. It affects every call. Reference the TAM above and see the **CAUTIONS** and **WARNINGS** before using any commands.

Commands	Description
>CALLTRAK	accesses the CallTrak level (may require password).
>ALLTOOLS	use to enable or disable all available tools.
>DISPLAY	use to show the output.
>MSGTRACE	use to monitor incoming or outgoing messages.
>PGMTRACE	use to trace call processes thru portions of the program code.
>QUIT	use to leave CallTrak level and return to the CI level.
>REMOVE	use to remove command to deselect originating terminal(s) or agent(s).
>SELECT	use to set origination terminal(s) or agent(s).
>SESSION	use to control CallTrak's virtual session capability, that is, users may monitor, create, delete, and move between sessions.
>START	use to begin tracing activity originating from the selected terminals.
>STATUS	use to display list of selected terminals & tools.
>STOP	use to stop call tracing activity.
>TIDTOVID	use to map specified terminal identifier (TID) to one or more associated virtual terminal identifiers (VIDs)..
>TIMECALL	use to collect and output call timing information.
>VIDTOTID	use to map the specified VID to the corresponding TID and extension byte.

**Note:** Use the following to load from TASNONRES if not resident:

## Loading CALLTRAK from TASNONRES

Execute the following files on TASNONRES:

>EXECUTE TCALLSUB\$FC  
>EXECUTE CALLCBSB\$FC  
>EXECUTE TCMGSSUB\$FC  
>EXECUTE TPCGMSUB\$FC  
>EXECUTE TCALLLN\$SFC  
>EXECUTE CTTOPSSB\$FC (Needed for TOPS)  
>EXECUTE TCLLKLNS\$FC (Needed for PPhones and ISDN)

## To run CALLTRAK

>CALLTRAK  
>PGMTRACE ON  
>PGMTRACE BUFSIZE 10000  
>PGMTRACE EXCLUDE PACKAGE SOSBILGE (Becomes PACKAGE NUCLEUS in TL09)  
>PGMTRACE EXCLUDE MODULE JNETUI  
>PGMTRACE EXCLUDE MODULE BCLAMAUI  
>PGMTRACE DISPLAYOPTS SET RETADDR EDITION (Only if return addresses and edition codes are needed)  
>MSGTRACE ON  
>MSGTRACE BUFSIZE SHORT 230  
>MSGTRACE BUFSIZE LONG 65

## You can select a terminal by one of the following:

>SELECT LEN <the LEN (AA-B-CC-DD) of the agent>  
>SELECT TID <node and terminal>  
>SELECT LTID <LTID Grp> <Terminal> [<key>]  
>SELECT TRK <CLLI and member>  
>SELECT DN <the Directory Number>

>START  
"Make the test call"  
>STOP  
>RECORD START ONTO <device>  
>DISPLAY MERGE  
>RECORD STOP ONTO <device>

## To capture another CALLTRAK without overwriting the first:

>STATUS (Note the session #)  
>SESSION NEW (Note the new session #)  
**Note:** At this point you can do the START command again.  
>SESSION CURRENT <session #> (toggles to the session)

## To send the display output to a file:

>DISPLAY MERGE NOWAIT <device> FILE <filename>

# CCS7 Test Utility (C7TU)

(TAM-1001-015, C7TU User Guide)

**Note:** Before using the C7TU commands below, see the TAM above and review the **Danger**, **Warning**, and **Caution** messages.

## C7TU Commands:

- >**C7TULINK** access the C7TULINK test environment. Use Q or HELP C7TULINK to get list of optional commands.
- >**C7TUREC** record unformatted C7TU reports to a file on the specified device. Use HELP C7TUREC for commands
- >**C7TUPRT** formats and prints C7TU reports.
- >**DPC {REPORT <on/off>, QUERY <routeset name>}** turn on/off routeset status change report. Query a DPC status.
- >**MSGCODE** list C7TU message codes and descriptions.  
**Note:** See ISUP messages codes on the next page.
- >**QUIT** exit C7TU.

## Monitoring CCS7 Messages:

- >**C7TUREC START <device name> <file name>**
- >**C7TULINK**

## Monitor all routes using specified linkset:

- >**MON LINK <linkset name> <member in linkset> <direction {IN, OUT,+BOTH}> ANSI ALL <msg code> DATA**

## Monitoring linkset specifying route:

- >**MON LINK <linkset name> <member in linkset> <direction {IN, OUT,+BOTH}> ANSI LABEL ALL <network indicator {INTL, INTLSP,+NATL, NATLSP, ALL}> <priority {0 to 4}(4=all)> <DPC\*>+<OPC\*> <SLS {0 to 32}(32=all)> <msg code> DATA**
- \*Note:** DPC/OPC format is <member> <cluster> <network>

## Selecting PM for monitor (sends MONITOR to PM):

- >**SELECT <PM {MSB7 or LIU7}> <PM #> ON**

## Restoring all monitor intercept/intercept request following a restart:

- >**RESTORE**

## Removing Monitors/Printing Results:

- >**REMOVE MATCH <item {0 to 7 or ALL}>**
- >**SELECT <PM {MSB7 or LIU7}> <PM #> OFF**
- >**C7TUREC STOP**

List device (i.e., >**LISTVOL <volume>**), then print records —

- >**C7TUPRT <filename>**

## Match and Mask Commands:

Use the MATCH command to indicate which bytes of data to be matched during the monitor.

- >**MATCH <item #> <byte offset> <match bytes>**

Ex: >**MATCH 0 14 01** **Note:** '01' is message code for an IAM

**Note:** Use the MASK command to mask out bytes during the monitor. The mask bytes are not used to compare for matching messages.

- >**MASK <item #> <byte offset> <mask bytes>** Ex: >**MASK 0 14 FF**

**Note:** Concerned node can be assigned using the MATCH and MASK commands or by using “parms” option of the MONITOR command.

## Table entry for ISUP messages

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Internal Use				SIO		DPC		OPC			SLS	CIC	H1/H 0	Spare	
5 - Member - 8				6 - Cluster - 9				7 - Network - 10							

**Note:** CIC and spare (data) can be assigned using MATCH and MASK commands or using “parms” option in the MONITOR command.

## Table entry for non-ISUP messages

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Internal Use				SIO		DPC		OPC			SLS	H <sup>1</sup> /H <sub>0</sub>	Spare		
5 - Member - 8				6 - Cluster - 9				7 - Network - 10							

**Note:** Spare (data) can only be assigned using the MATCH and MASK commands.

## Table entry for Signal Network Message (SNM) messages

Table 1: Message (11) Messages															
0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Internal Use				SIO		DPC		OPC			SLS	H1/H 0	Concerned Node		
5 - Member - 8				6 - Cluster - 9				7 - Network - 10

## A through Z

<b>Abbreviations and Acronyms .....</b>	<b>1</b>
<b>ACDDEBUG .....</b>	<b>146</b>
<b>ACD-MIS Quick References .....</b>	<b>35</b>
ACD Commands .....	35
ACDDEBUG Command .....	35
ACDQSTAT Command .....	35
ACDSHOW Commands .....	35
ACD OM Groups .....	36
ACDRTD Real Time Display Command .....	35
<b>AFT and RASL Commands .....</b>	<b>17</b>
<b>AIN Quick References .....</b>	<b>33</b>
AINTRACE Command .....	33
<b>AMADUMP Commands .....</b>	<b>17</b>
<b>ASCII to HEX .....</b>	<b>159</b>
<b>Attendant Console Internal to Physical Key Mapping .....</b>	<b>48</b>
To calculate the PMIST lamp and group number .....	48
<b>Attendant Console Lamp Keyboard Layout .....</b>	<b>48</b>
<b>Attendant Console Lamp to Physical Key Mapping .....</b>	<b>48</b>
<b>Attendant Console Quick References .....</b>	<b>47</b>
AC Command (@ CI: level) .....	47
MT Command (@ CI: level) .....	47
Posting Consoles and associated lines .....	47
QQ Command (@ CI: level) .....	47
Trouble Key Assignment .....	47
XPMIST the Attendant Console .....	47
<b>Automatic Image Dump .....</b>	<b>26</b>
Autodump Commands .....	26
AUTOIMAGE Tables .....	26
Summary of PRSM Auto Processes .....	26
<b>Billing Media Converter (BMC) (MD'd 4Q00) .....</b>	<b>144</b>
A Chassis (Processor A) .....	144
B Chassis (Processor B) .....	144
<b>Broadband STP Quick References .....</b>	<b>57</b>
Broadband STP Control CAM Rear Shelf .....	57
Broadband STP Control CAM Shelf Front .....	57
CAM Shelf Component PECs .....	57
CAM Shelf LED State Notes .....	58
OAM&P Workstation & Network Equip Config. Table .....	58
<b>Cabinetized Line Module ISDN (CLMI) Frame .....</b>	<b>117</b>
<b>Cabinetized Remote Switching Center/ISDN (CRSC/ISDN) ....</b>	<b>120</b>
<b>Calculating Node and Terminal Numbers .....</b>	<b>27</b>
Attendant Console .....	27
DCM .....	27
DNs, LENs, Trunks .....	27
DTC .....	27
IOC 1X67 Card .....	27
ISDN Sets .....	27
MPC .....	27
TOPS IV/MP DMODEM .....	27
TOPS IV/MP Positions .....	27
TOPS MPX Position .....	27
<b>CALLDUMP CI: Level Command .....</b>	<b>17</b>
<b>CALLTRAK .....</b>	<b>156</b>
CC MIS Documentation .....	40
CC MIS Hardware Block Diagram .....	41
<b>CC MIS Quick References .....</b>	<b>40</b>
CC MIS Remote Login .....	40

CC MIS System Reports .....	40
<b>CCS7 Fault scenario concerns a single STP failure. ....</b>	<b>56</b>
<b>CCS7 Fault scenario concerns a single link failure .....</b>	<b>54</b>
<b>CCS7 Fault scenario concerns both links failing .....</b>	<b>55</b>
<b>CCS7 Fault scenario concerns linkset with one “A” link. ....</b>	<b>53</b>
<b>CCS7 Quick References .....</b>	<b>51</b>
CCS7 Linksets .....	51
CCS7 Protocol Components .....	52
CCS7 Terminology .....	51
ISUP Trunk Selection .....	52
<b>CCS7 Test Utility (C7TU) .....</b>	<b>157</b>
ISUP MSG Codes as listed with C7TU Msgcode .....	158
Table entry for ISUP messages .....	157
Table entry for non-ISUP messages .....	157
Table entry for Signal Network Message (SNM) messages .....	157
<b>Centrex IP Client Manager Quick References .....</b>	<b>45</b>
Centrex IP Gateway MCG CPX8216T Chassis .....	45
Centrex IP and Conventional Centrex Configuration .....	46
Centrex IP Client Manager Documentation References .....	46
Event Logs .....	46
PTE2000 Centrex IP Frame .....	45
<b>Circuit Pack Descriptions .....</b>	<b>72</b>
<b>CLASS Quick References .....</b>	<b>19</b>
CLASS References .....	20
CLASS Engineering Parameters .....	20
CLASS related LOGS .....	20
CLASS related OM Groups .....	20
CLASS related Tables .....	20
CLOG Utility and Subcommands .....	20
CNAMDVER CI: Level Command .....	19
MAKERES Utility .....	19
QBCLID CI: Level Command .....	20
QCM CI: Level Command .....	20
QSL CI: Level Command .....	19
REVLXVER CI: Level Command .....	19
SERVORD CHL Command .....	20
SERVORD CNAMDACG Command .....	20
TESTAME CI: Level Command .....	19
<b>CMINFO Special System Query Commands .....</b>	<b>155</b>
<b>Common Peripheral Controller Equipment Frame.....</b>	<b>115</b>
<b>CompuCALL Quick References .....</b>	<b>42</b>
CompuCALL Hardware Diagram .....	42
CompuCALL References .....	42
<b>Computing Module (CM) Processor shelf .....</b>	<b>129</b>
<b>Debug Verification of Line State .....</b>	<b>154</b>
<b>Debug Verification of Trunk State .....</b>	<b>154</b>
Supplemental Debug Calculations for Trunks .....	155
<b>Decimal to HEX to Binary Chart .....</b>	<b>149</b>
<b>Digital Carrier Module (DCM) shelf .....</b>	<b>93</b>
<b>Digital Line Module (DLM) shelf .....</b>	<b>119</b>
<b>Digital Trunk Controller (DTC) shelf .....</b>	<b>113</b>
<b>DIP Switch Settings for 6X21AD Line Card .....</b>	<b>91</b>
<b>DIP Switch Settings for 6X50 and 6X85 DS1 Cards .....</b>	<b>90</b>
<b>DISPCALL Commands .....</b>	<b>14</b>
<b>Distributed Processing Peripheral (DPP) .....</b>	<b>139</b>
DPP Commands .....	140
<b>DLOG Commands .....</b>	<b>22</b>
<b>DMS CI: Level Commands .....</b>	<b>8</b>
<b>DMS Scheduler (DMSSCHED) Commands .....</b>	<b>12</b>
<b>DMSMON Commands .....</b>	<b>14</b>
<b>DMS-250 Quick References .....</b>	<b>38</b>
AUTHTEST Command .....	38
DMS 250 Tables .....	38

QACCT Commands .....	38
Travel Card Number Test (TCNTEST) Command .....	38
Trunk Group Types .....	38
TRAVER of DAL Trunk .....	39
TRAVER of EANT Trunk .....	39
<b>DRAM (modified MTM) shelf .....</b>	<b>100</b>
Optional PROM and RAM Speech Memory Cards .....	100
<b>DRAMREC Utility Commands .....</b>	<b>100</b>
<b>DTC and Network Mapping .....</b>	<b>89</b>
<b>Enhanced Network (ENET) shelf .....</b>	<b>130</b>
<b>Expanded SCM-100 Access 2 (SMA2) .....</b>	<b>102</b>
NTMX87 & NTMX81 Packlet P-side Port Provisioning ..	102
SMA2 Extension shelf .....	102
SMA2 Main shelf .....	102
<b>File Processor shelf (MD) .....</b>	<b>134</b>
<b>File Processor Storage Device shelf (MD) .....</b>	<b>134</b>
<b>GPP CPM Main and Extension shelves .....</b>	<b>98</b>
GPP CPM Extension shelf .....	98
GPP CPM Main shelf .....	98
GPP to Line and Line to GPP Commands .....	98
<b>ICP Overseas (ICPO) shelf .....</b>	<b>114</b>
<b>Input Output Module (IOM) (Located in ISM shelf) .....</b>	<b>96</b>
<b>Input/Output Controller (IOC) shelf (MD) .....</b>	<b>93</b>
<b>Input/Output Quick Reference Cable Chart .....</b>	<b>145</b>
<b>Installation Documentation .....</b>	<b>5</b>
<b>Integrated Services Module (ISM) shelf .....</b>	<b>96</b>
<b>Intelligent Cellular Peripheral (ICP) shelf .....</b>	<b>114</b>
<b>Intelligent Peripheral Equipment (IPE) shelf .....</b>	<b>119</b>
<b>International PDTC shelf (NT6X0211) .....</b>	<b>114</b>
<b>International PLGC or PLTC shelf .....</b>	<b>114</b>
<b>IOC DSKUT NonMenu Commands .....</b>	<b>15</b>
<b>ISDN BRI Troubleshooting PM180 and PM189 Logs .....</b>	<b>150</b>
<b>ISDN Common Peripheral Controller shelf .....</b>	<b>113</b>
<b>ISDN Quick References .....</b>	<b>30</b>
Assignment of P-Side Links to ISDN Peripherals .....	32
Configuring a BRAFS ISDN set with SPID .....	31
ISDN Office Engineering (OFCENG) Table Parameters ....	30
ISDN OM Groups .....	30
ISDN Query Commands .....	30
ISDN Loopback Reference .....	31
PRI Datafill of Interface IDentifier (IID) .....	32
PRI Trunk AMI vs. B8ZS Capability Datafill .....	32
Reserving a Spare DCH .....	31
<b>ISDN Q931 Procedures for Traces on BRI and PRI .....</b>	<b>151</b>
<b>ISM assignments to MLT and other test equipment .....</b>	<b>97</b>
<b>Junctored Double Shelf Network (MD) .....</b>	<b>92</b>
<b>LCM line drawer layout .....</b>	<b>118</b>
<b>LCME line drawer layout .....</b>	<b>118</b>
<b>Line Concentrating Array ISDN (LCAI) LCME .....</b>	<b>116</b>
<b>Line Concentrating Array (LCA) LCM Unit 0 shelf .....</b>	<b>116</b>
<b>Line Concentrating Equipment (LCE) frame .....</b>	<b>117</b>
<b>Line Module (LM) shelf (MD) .....</b>	<b>94</b>
Table LMRNG .....	94
<b>Line Trunk/Line Group Controller (LTC/LGC) shelf .....</b>	<b>113</b>
<b>Link Peripheral Processor (LPP) .....</b>	<b>131</b>
Example of LIS equipped with 8 FRIUs (Front view only)	133
Link Interface Shelf (LIS) with LIUs (NT9X72) .....	131
Local Message Switch (LMS) shelf (NT9X71) .....	131
Link Interface Shelf with LIUs (NT9X72BA) .....	132
Link Interface Shelf with 12 EIUs .....	132
Link Interface Shelf with 8 EIUs .....	132
Link Interface Shelf with FRIUs (NT9X72BA) .....	133
Link Interface Shelf with XLIUs and NIUs .....	133

<b>LM/RLM Ringing Table .....</b>	<b>94</b>
<b>Local Number Portability (LNP) Quick References .....</b>	<b>34</b>
Call to Ported DN .....	34
LNP TRAVER Examples .....	34
<b>LOGUTIL Info, Control, Routing, &amp; Devices Commands ...</b>	<b>13</b>
<b>LOGUTIL Log Browsing Commands .....</b>	<b>13</b>
<b>Mag Tape (9 Track) Commands .....</b>	<b>17</b>
<b>Maintenance Trunk Module (MTM) shelf (NT2X58) .....</b>	<b>95</b>
<b>Message Services Module (MSM) for DMS VoiceMail .....</b>	<b>124</b>
<b>Message Switch (MS) shelf (NT9X04) .....</b>	<b>129</b>
<b>Nortel Networks Technical Publications .....</b>	<b>2</b>
DMS-100F Documentation Numbering .....	2
Key Numbers .....	3
NTP 297-1001-ZZZ DMS-100 Family Documents .....	3
Other NTP & PLN PCL Common & Misc. Documents .....	4
Technical Assistance Manuals (TAMs) .....	4
<b>NOTES .....</b>	<b>159</b>
<b>Office Hardware Inventory Package (OHIP) Table .....</b>	<b>86</b>
<b>OM Commands .....</b>	<b>10</b>
<b>OPM-256 Bay Frame Configuration (NT8X01BC) .....</b>	<b>123</b>
OPM-640 Bay Frame (NT8X01AA, AB) .....	123
<b>Outside Plant Access Cabinet .....</b>	<b>122</b>
