💡 Automatic Number Identification (ANI)
thread798-1622390

NEW! ⭐ **jjmcneil** (TechnicalUser)   2 Oct 10 19:40

I was searching around the forums for an automated ANI solution to identify unknown sets and analog ports.

There were a few ideas here on the forums that got me going, of which I would like to thank those that have posted information on this issue, into making something that will work with a Callpilot, SCCS/CCM combination, I have not tried this with an MM as I don't have access to one. I hope that this is be helpful to some of you out there as it has been for me.

The attached link for the zip file includes instructions and wav files to get a fully functional ANI up and running.

Please keep in mind that the instructions assume the user is already comfortable with CDN's, App Builder and Scripting🔍.

I apologize in advance if I missed something or this has been posted before and I am open to any questions/suggestions/criticisms that you may have.

Thanks!

Wow, this is such a great post - thank you so much! If you ever need a place to store your files, I would do that, with credits to you.
